Introduction

Purpose

This resource guide has been developed to provide teachers and other stakeholders with an understanding of the District of Columbia Comprehensive Assessment System (DC CAS). When used in conjunction with other curricular materials and texts, the guide will

- help teachers as they make decisions about targeted classroom instruction and assessment,
- provide a framework and focus of instruction aligned with the skills and processes measured by test items of the DC CAS, and
- enhance and strengthen instructional journeys.

Test Accountability

The tests of the DC CAS have been designed to measure the academic proficiency of students in the District of Columbia relative to their mastery of the DC Content Standards. These tests are aligned to the approved English Language Arts, Mathematics, and Science standards of the District of Columbia. The complete standards documents can be viewed online at <http://osse.dc.gov/se0/cwp/view,a,1222,q,561249,PM,1,seoNav,l31195l.asp>.

The battery of tests of the DC CAS are administered in the spring of each school year.

DC CAS testing is scheduled to take place April 4–14, 2011.

Reading and mathematics tests have been operational since 2006 and are administered to students in grades 3–8 and 10. Per the federal requirements of the Elementary and Secondary Education Act (ESEA) legislation, the goal of measuring Adequate Yearly Progress (AYP) will be attained by tracking students' reading and mathematics performance.

The testing of students' writing skills via the composition component of the DC CAS became operational in Spring 2008. Prior to that administration, a series of writing prompts were piloted in 2006 and 2007.

In Spring 2007, science tests were administered to students in grades 5 and 8 as well as to students who were enrolled in their school's biology course. The science and biology tests were first operational in 2008, and student scores on these tests have been reported since that administration.

At this time, neither writing nor science scores are included in the state's AYP, but they are reported to the United States Department of Education for accountability and included in schools' annual report cards.

Test Format

In 2011, as in previous years, the tests for reading and mathematics will be combined into one test book. For each tested grade, there will be two

forms. Teachers should always confirm that each student has a corresponding test book and answer booklet.

For grade 3, the students write their answers in their scannable test books. Students in grades 4–8 and 10 record their answers in scannable answer booklets, color-coded by form and grade.

The science and biology tests will also have two forms each, and both a test book and an answer booklet will be assigned to each student taking the test.

Only the composition test will have one form for each tested grade.

Both selected-response (multiple-choice) and constructed-response items comprise the tests of the DC CAS. For a selected-response item, students choose the correct answer from among four answer choices. For a constructed-response item, students write a response to a test question. Student responses are then scored according to the criteria of rubrics or scoring guides. Reading, writing, and mathematics rubrics can be found on pages 92 through 94 of this guide. Sample scoring guides for science items can be found on pages 95 through 97.

Reporting Categories

The test items of the DC CAS are written to measure the proficiency of students based on the District of Columbia standards. These standards are grouped according to strands, and these strands are the reporting categories of the DC CAS. Each category is not equally weighted.

A description of the reporting categories and what each measures follows:

Reading

- **Language Development:** Items in this category measure students' ability to identify meanings of words using prior knowledge, word structure, etymology, a dictionary, and/or context.
- **Informational Text:** Items of this category measure students' ability to read, comprehend, and respond to informational passages. The passages used may be expository texts, documentary or procedural texts, or persuasive texts. Students may be asked to locate or interpret details, examine structure, identify main idea, or explain/evaluate key ideas of a given text.
- **Literary Text:** Items of this category measure students' ability to read, comprehend, and respond to literary passages. These passages may be short stories, poems, excerpts from larger works, fables, or literary nonfiction. Students may be asked about the literary

elements or the style and language of the text. They may also be asked to explain or analyze the theme or the author's implicit purpose or audience.

Composition

Student writing is evaluated on two rubrics that include the following:

- **Topic Development:** clarity of focus, development of ideas, appropriate organization, and effective use of language.
- **Language Conventions:** sentence structure, grammar, and use of conventions.

Grade 4: Each student is directed to write a story or personal narrative about a particular experience or situation.

Grade 7: Each student is directed to write an explanatory essay about a given topic or issue.

Grade 10: Each student is presented a quotation to consider and then directed to write a persuasive essay in which he/she takes a stand on a given issue or theme.

Mathematics

- **Number Sense and Operations:** These items measure students' ability to use numbers and number relationships. Students may be asked to represent numbers, describe relationships among numbers, compute fluently, or make reasonable estimations.

- **Patterns, Relations, and Algebra:** Items of this category measure students' ability to use algebraic methods to describe or analyze patterns, relations, and functions. They may also be asked to represent and analyze mathematical situations using algebraic symbols, tables, and graphs and to perform operations on algebraic expressions, equations, and inequalities.
- **Geometry:** Items of this category measure students' ability to use geometric concepts, properties, and relationships. Students may be asked to analyze the characteristics and properties of two- and three-dimensional geometric shapes and describe spatial relationships. They may also be asked to apply transformations and specify locations using coordinate geometry.
- **Measurement:** Items of this category measure students' ability to use tools, techniques, and formulas to determine measurements. They may also be asked to describe the measurable attributes of objects and the units, systems, and processes of measurement.
- **Data Analysis, Statistics, and Probability:** Items of this category measure students' ability to use data analysis, statistics, and probability. Students may be asked to represent and analyze data, including statistical methods, and make predictions based on data. They may also be asked to apply basic concepts of probability.

Science

Grade 5 Science

- **Science and Technology:** Items of this category measure students' knowledge of scientific inquiry and the impacts of technology on society. Students may be asked to analyze experimental design and data. They may be asked to determine the area and volume of rectangles. Students may be asked to give examples of materials made available because of science and technology.
- **Earth and Space Science:** Items of this category measure students' knowledge of the solar system and the physical characteristics of Earth. Students may be asked to describe the water cycle and explain how global patterns influence local weather and climate.
- **Physical Science:** Items of this category measure students' basic understanding of the periodic table, force and motion, and heat transfer. Students may be asked to investigate how heating and cooling affect substances and describe the effect of balanced and unbalanced forces on an object.
- **Life Science:** Items of this category measure students' basic understanding of cells, inheritance, and adaptation. Students may be asked to identify organisms, describe their characteristics, examine their reactions to

changes in the environment, and analyze the effect of environmental changes on their survival.

Grade 8 Science

- **Scientific Thinking and Inquiry:** Items of this category measure students' understanding and application of scientific design. Students may be asked to design or critique investigations and analyze reasoning used in scientific arguments. They may also be asked to apply simple mathematical models to problems.
- **Matter and Reactions:** Items of this category measure students' basic understanding of the properties and structures of elements and chemical reactions. Students may be asked to recognize and describe characteristics of atoms, molecules, compounds, and ions. They may be asked to describe the mass, weight, and density of an object. Students may be asked to demonstrate understanding of conservation of matter, endothermic and exothermic chemical reactions, factors that affect reaction rates, acidic and basic solutions, and evidence that chemical changes have taken place.
- **Forces:** Items of this category measure students' understanding of the concepts of force and motion. Students may be asked to determine and explain the buoyant force on an object. They may also be asked to determine and describe the effect of forces on the motion of objects.

- **Energy and Waves:** Items of this category measure students' basic knowledge of energy and how it is transferred. Students may be asked to recognize and describe various forms of energy including kinetic, potential, electrical, gravitational, sound, heat, and light energy.

Biology:

- **Cell Biology and Biochemistry:** Items of this category measure students' basic understanding of the chemistry of living things and knowledge of cell structures and functions. Students may be asked to use simplified Bohr diagrams, describe the structure and properties of water, and describe the molecules found in living things. They may be asked to describe cell organelles and compare and contrast prokaryotic and eukaryotic cells. They may also be asked to describe cellular respiration, mitosis, and meiosis.
- **Genetics and Evolution:** Items of this category measure students' knowledge of genes, biodiversity, and the theory of evolution. Students may be asked to describe how genes are passed from parents to offspring, and explain the relationship between DNA and proteins. They may be asked to explain recombination of genes in sexual reproduction and relate DNA similarities to degrees of kinship. Students may be asked to describe how genetic diversity helps organisms survive in a

changing environment. They may also be asked to relate the concepts of heredity and natural selection to the modern theory of evolution.

- **Multicellular Organisms: Plants and Animals:** Items of this category measure students' knowledge of plant and animal biology. Students may be asked to describe the structure and function of plant parts and identify the roles of plants in the ecosystem. They may also be asked to identify and analyze the complementary activity of mammalian body systems.

- **Ecosystems:** Items of this category measure students' knowledge of biotic and abiotic factors in ecosystems. Students may be asked to analyze the effect of population changes on the ecological balance of a community. They may also be asked to assess methods for monitoring and safeguarding water quality.

This Guide and Other Resources

The item stems and resources in this guide have been created and assembled by the Office of the

State Superintendent of Education (OSSE) and CTB/McGraw-Hill, the DC CAS test development vendor.

For a sample of released mathematics and science/biology items, go to: <http://www.nclb.osse.dc.gov/itembank.asp>. For a sample of released reading items, contact your Local Education Agency (LEA) for online access instructions.

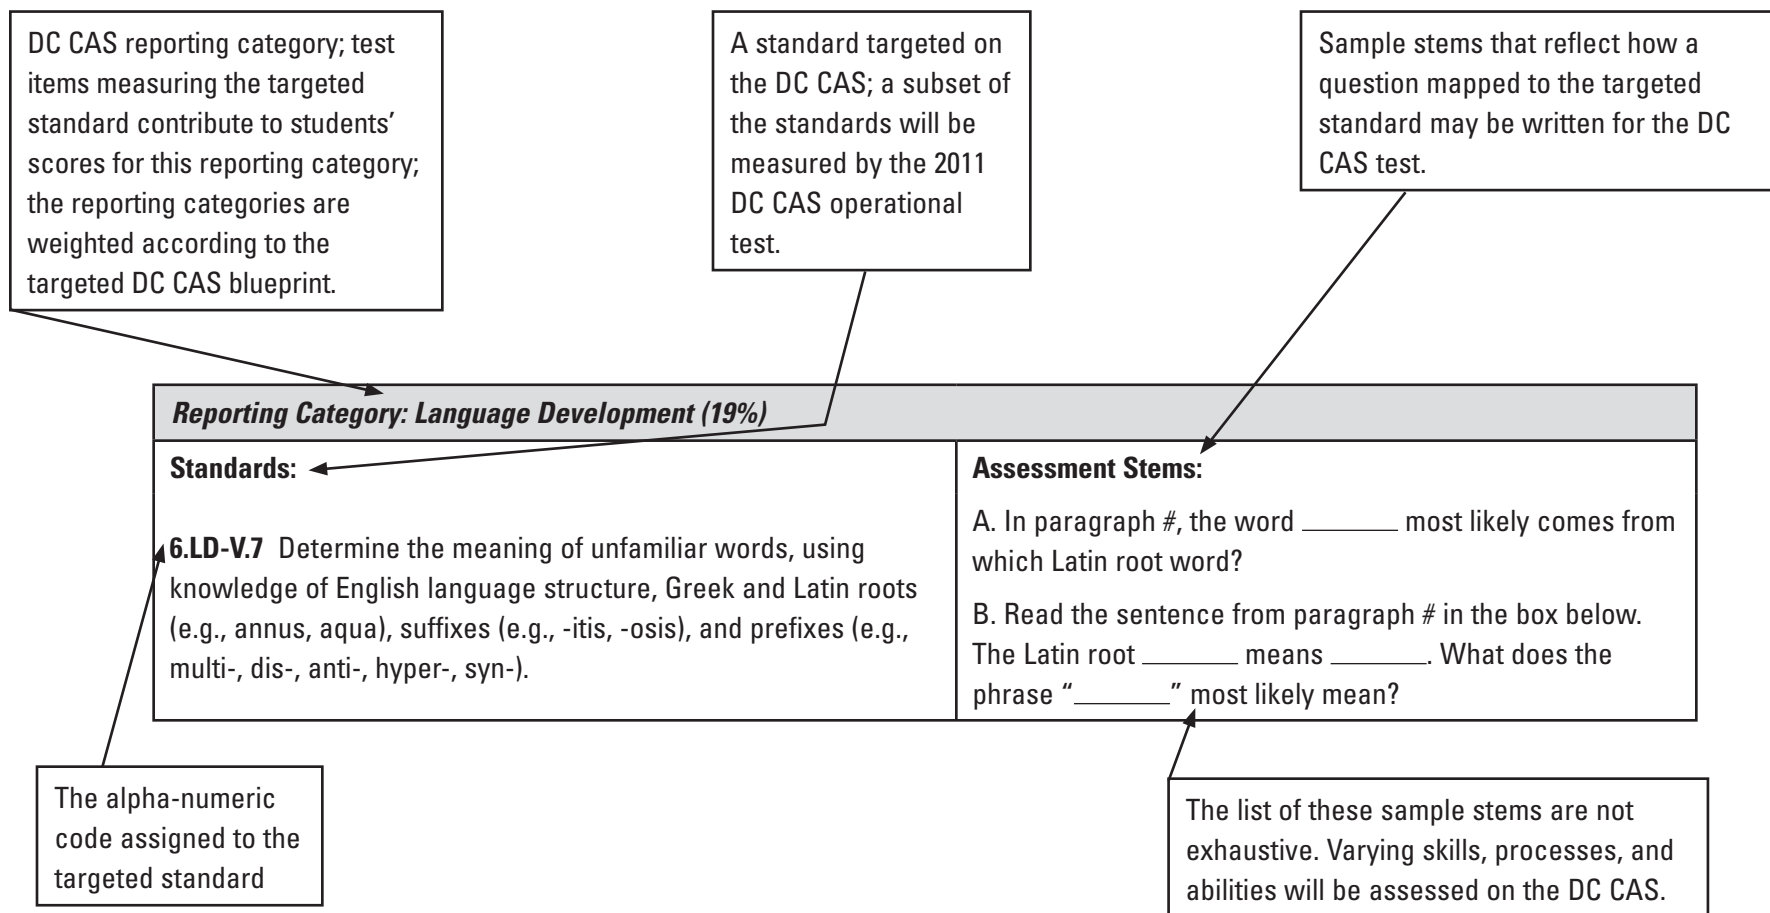

For questions or to provide feedback, please email OSSE.assessment@dc.gov.

DC CAS Tested Standards

The information in the tables on pages 7 through 90 has been collected to provide instructional focus relative to the DC CAS tests. Instruction should not be limited to the skills and processes identified in the standards in the tables. All approved standards represent what students should know and be able to do and will be assessed across administrations.

For the 2011 DC CAS, all items on the reading and mathematics field test are aligned to both the current DC Standards and the newly adopted Common Core Standards. The 2011 DC CAS will remain aligned to the current DC Standards.

Prior to using the tables, educators should review the sample below and the explanation of the content of each column.

READING

Grade 3

Reporting Category: Language Development (19%)	
<p>Standards:</p> <p>3.LD-V.8 Identify the meaning of common prefixes and suffixes (e.g., un-, re-, in-, dis-, -ful, -ly, -less) and know how they change the meaning of root words (e.g., happy/unhappy, tell/retell).</p> <p>3.LD-V.9 Identify roots of words (e.g., “graph” is a common root in autograph, photograph, biography).</p> <p>3.LD-V.10 Identify playful uses of language (e.g., tongue twisters, riddles).</p> <p>3.LD-V.11 Recognize that some words and phrases have both a literal and non-literal meaning (e.g., take steps).</p> <p>3.LD-V.12 Use context of the sentence to determine the intended meaning of an unknown word or a word with multiple meanings.</p> <p>3.LD-V.13 Determine the meanings of words and alternate word choices using intermediate-level dictionaries and thesauri.</p>	<p>Assessment Stems:</p> <p>If the word [word from text] means _____, then the word [word from text with affix] means . . .</p> <p>Read the sentence from paragraph #. The root word of _____ means _____. The word _____ as it is used in the sentence means . . .</p> <p>Read the sentence from paragraph X in the box below. [insert passage excerpt] In the sentence, the word _____ <u>probably</u> means . . .</p> <p>Read the sentence from paragraph #. The words “_____” mean that [a character] thinks . . .</p> <p>Read the sentence from paragraph #. Which word in the sentence helps the reader understand that _____?</p> <p>Read the dictionary entry below. _____ <i>n.</i> 1. First definition. 2. Second definition. 3. Third definition. 4. Fourth definition. Now read this sentence from paragraph X. [insert passage excerpt] What does _____ mean as it is used in the sentence?</p>
Reporting Category: Informational Text (33%)	
<p>3.IT-E.1 Identify the purpose or main point and supporting details in text.</p> <p>3.IT-E.2 Identify the facts given in a text.</p> <p>3.IT-E.3 Distinguish cause from effect.</p>	<p>A. This article was mostly written to . . .</p> <p>B. The article states that _____ can do all of these things EXCEPT . . .</p> <p>A. When does _____ happen?</p> <p>B. How long does it take for _____ to happen?</p> <p>According to the article, why can _____ do _____?</p>

Grade 3

Reporting Category: Informational Text (33%) (continued)	
<p>Standards:</p> <p>3.IT-E.4 Identify and use knowledge of common textual features (e.g., title, headings, table of contents, glossary, captions) to make predictions about content.</p> <p>3.IT-E.5 Form questions about text and locate facts in response to those questions.</p> <p>3.IT-DP.6 Locate specific information in graphic representations (e.g., charts, maps, diagrams, illustrations, tables, timelines) of text.</p> <p>3.IT-DP.7 Use information from text and text features to determine the sequence of activities needed to carry out a procedure.</p>	<p>Assessment Stems:</p> <p>A. The title of the column “ _____ ” means the information will probably (explain, describe, etc.) . . .</p> <p>B. If the article were in a book, where would a definition of _____ be found?</p> <p>Which of these questions about _____ is answered in the article?</p> <p>A. Using information from the chart, explain how _____ and _____ are different.</p> <p>B. According to the chart, which of the following statements about the _____ is true?</p> <p>According to the directions in the _____, what do you do right after _____?</p>
Reporting Category: Literary Text (48%)	
<p>3.LT-U.1 Identify chapter titles and illustrations as parts of a text that help the reader predict what will happen next in a story.</p> <p>3.LT-U.3 Form questions about a text and locate facts/details in order to answer those questions.</p> <p>3.LT-U.4 Use story details and prior knowledge to understand ideas that are not directly stated in the text.</p> <p>3.LT-G.6 Identify common forms of literature (poetry, prose, fiction, nonfiction, and drama) using knowledge of their structural elements.</p> <p>3.LT-T.7 Identify themes as moral lessons in folktales and fables.</p>	<p>[Four illustrations] Which illustration shows what happens in the poem?</p> <p>What does [character] do first when he arrives at _____?</p> <p>A. Which of these sentences helps the reader know that the story takes place in _____?</p> <p>B. According to the article/story, what is true about _____?</p> <p>How does the reader <u>best</u> know that _____ is a poem?</p> <p>What is the lesson of this story?</p>

Grade 3

Reporting Category: Literary Text (48%) (continued)

Standards:

3.LT-F.8 Identify the elements of stories (problem, solution, character, and setting) and analyze how major events lead from problem to solution.

3.LT-F.9 Identify personality traits of characters and the thoughts, words, and actions that reveal their personalities.

3.LT-F.10 Identify who is telling the story or speaking in a poem.

3.LT-P.11 Identify rhyme, rhythm, repetition, similes, and sensory images in poetry.

3.LT-S.13 Identify sensory words.

Assessment Stems:

A. In the story, what is true about _____?

B. In the beginning of the story, _____ mostly feels . . .

C. Explain how [a character] does or does not solve his problem. Support your answer with important details from the story.

A. [Character] in the story could best be described as . . .

B. In paragraph #, _____ speaks in what way?

Who is telling this story?

What is the rhyming pattern in this poem?

Which group of words from the poem best helps the reader imagine what the _____ looks and sounds like?

Grade 4

Reporting Category: Language Development (19%)	
<p>Standards:</p> <p>4.LD-V.9 Determine the effect of affixes on roots (e.g., the effect of “un” on roots such as “happy” or “common” to make the word “unhappy” or “uncommon”).</p> <p>4.LD-V.10 Use knowledge of morphology or the analysis of word roots and affixes to determine the meaning of unfamiliar words (e.g., meaning of Greek root “graph” to understand the meaning of the words telegraph, photograph, and autograph).</p> <p>4.LD-V.11 Identify and use playful language such as puns, jokes, palindromes.</p> <p>4.LD-V.12 Identify the meaning of figurative language and phrases (e.g., “last straw,” “cold feet,” “I’m in hot water.”).</p> <p>4.LD-V.13 Recognize and use words with multiple meanings (e.g., sentence, school, hard) and determine which meaning is intended from the context of the sentence.</p> <p>4.LD-V.14 Determine meanings and other features of words (e.g., pronunciation, syllabication, parts of speech) using intermediate-level dictionaries and thesauri.</p>	<p>Assessment Stems:</p> <p>A. In the story, [character] wanted to be [word from the text with an affix added]. What does _____ probably mean?</p> <p>B. Read the sentence from paragraph # in the box below. [sentence] If _____ means _____, then [a word from the text with an affix added] means . . .</p> <p>A [word with basic root] does _____. Something [another word with same root] can be _____. A [still another word with the root] is _____. What does the word [from the text] _____ mean?</p> <p>The words _____ <u>most likely</u> mean . . .</p> <p>Read the sentence from paragraph # in the box below. [sentence] What does [character] mean when she says she’s _____?</p> <p>A. Read the sentence from paragraph # in the box below. [sentence] In the sentence, the word _____ means . . .</p> <p>B. Read the sentence from paragraph # in the box below. [sentence] What definition of the word _____ is used in the sentence?</p> <p>Read the dictionary entry below. _____ <i>n.</i> 1. First definition. 2. Second definition. 3. Third definition. 4. Fourth definition. Now read this sentence from paragraph X. [insert passage excerpt] What does _____ mean as it is used in the sentence?</p>
Reporting Category: Informational Text (33%)	
<p>4.IT-E.1* Identify the purpose and main points of a text and summarize its supporting details.</p>	<p>A. This article is mostly about . . .</p> <p>B. The main purpose for reading this article is to find out about . . .</p> <p>C. Explain how _____ is able to _____. Support your answer with important details from the story/article.</p>

*Items mapped to these standards will contribute to either the Informational Text or Literary Text reporting category, which is dependent upon the text genre associated with the item.

Grade 4

Reporting Category: Informational Text (33%) (continued)	
<p>Standards:</p> <p>4.IT-E.2 Distinguish fact from opinion.</p> <p>4.IT-E.3* Identify cause-and-effect relationships (stated and implied).</p> <p>4.IT-E.4 Identify and use knowledge of common textual features (e.g., paragraphs, topic sentences, concluding sentences, glossary).</p> <p>4.IT-E.5* Ask questions and support answers by connecting prior knowledge with literal and inferential information found in texts.</p> <p>4.IT-DP.6 Interpret information in graphic representations (e.g., charts, maps, diagrams, illustrations, tables, timelines) of text.</p>	<p>Assessment Stems:</p> <p>Which of these statements is an opinion from the article?</p> <p>The boxes below show cause and effect in the passage. Which of the following events belongs in the empty box?</p> <p>Which of the following choices would be the best heading for the first four paragraphs of the article?</p> <p>From what you have read, you can conclude that . . .</p> <p>What does the timeline help the reader understand about _____?</p>
Reporting Category: Literary Text (48%)	
<p>4.LT-C.1 Identify similarities and differences between the characters or events in a literary work and the actual experiences in an author’s life (e.g., Laura Ingalls Wilder and the <i>Little House</i> books).</p> <p>4.LT-G.2 Distinguish among common forms of literature (poetry, prose, fiction, nonfiction, and drama) using knowledge of their structural elements.</p> <p>4.LT-T.4 Compare the moral lessons of several fables.</p> <p>4.LT-F.5 Explain how the plot, setting, or characters influence the events in a story, using evidence from the text.</p> <p>4.LT-F.6 Describe a character’s traits, relationships, and feelings, using evidence from the text (e.g., thoughts, dialogue, actions).</p> <p>4.LT-P.8 Recognize the similarities of sounds in words (e.g., onomatopoeia, alliteration, assonance) and rhythmic patterns in a poetry selection.</p>	<p>Explain what is the same about _____ and the message in the poem. Support your answer with important details from the story/poem/article.</p> <p>Which of these sentences best explains why _____ [character] talks about _____?</p> <p>Which of these lessons can be learned from the story?</p> <p>A. Why does _____ decide to _____?</p> <p>B. At the end of the story, why does _____ decide to _____?</p> <p>A. Read the sentences from paragraph # in the box below. The author most likely uses the details in the sentences to show that [character] . . .</p> <p>B. Explain how _____ changes from the beginning of the story to the end. Support your answer with important details from the story.</p> <p>By repeating words in each verse of the poem, the poet . . .</p>

*Items mapped to these standards will contribute to either the Informational Text or Literary Text reporting category, which is dependent upon the text genre associated with the item.

Grade 4

Reporting Category: Literary Text (48%) (continued)

Standards:

4.LT-P.9 Identify characteristics and structural elements (e.g., imagery, rhyme, verse, rhythm, meter) of poetry (narrative poem, free verse, lyrical poem, humorous poem).

4.LT-S.11 Identify sensory details and figurative language in a story or poem.

Assessment Stems:

What makes _____ a poem?

In which line of the poem does [a non-person] seem to be like a person?

Grade 5

Reporting Category: Language Development (19%)	
<p>Standards:</p> <p>5.LD-V.8 Identify the meaning of common Greek and Latin roots and affixes to determine the meaning of unfamiliar words.</p> <p>5.LD-V.9 Identify and apply the meanings of the terms antonym, synonym, and homophone.</p> <p>5.LD-V.10 Determine the meaning of unfamiliar words in context using definitions and examples stated in the text.</p> <p>5.LD-V.11 Identify meanings, pronunciations, alternate word choices, correct spellings, and parts of speech or words by using dictionaries and thesauri (printed and electronic).</p>	<p>Assessment Stems:</p> <p>Read the sentence from paragraph # in the box below. [sentence] The prefix _____ in the word _____ most likely means . . .</p> <p>Read the sentence from paragraph # in the box below. [sentence] Which word is closest in meaning to the word _____ as it is used in the sentence?</p> <p>Read the sentence from paragraph # in the box below. [sentence] Which word means the same as the word _____ as it is used in the sentence?</p> <p>Read the dictionary entry in the box below. [dictionary entry] Which definition matches the meaning of the word _____ as it is used in paragraph #?</p>
Reporting Category: Informational Text (33%)	
<p>5.IT-E.1* Identify the author’s purpose and summarize the critical details of expository text, maintaining chronological or logical order.</p> <p>5.IT-E.2 Distinguish fact from opinion in expository text, providing supporting evidence from text.</p> <p>5.IT-E.4 Identify and use knowledge of common textual features (e.g., title, headings, key words, captions, paragraphs, topic sentences, table of contents, index, glossary).</p> <p>5.IT-E.5 Identify common organizational structures such as chronological order and cause and effect.</p> <p>5.IT-A.7 Determine an author’s position (i.e., what the author is arguing), providing supporting evidence from the text.</p>	<p>A. According to the article, _____ happens when . . .</p> <p>B. The author most likely wrote this article in order to . . .</p> <p>C. This article is mostly about . . .</p> <p>Which of these sentences from the article expresses a(n) fact/opinion?</p> <p>The caption below the photo on page X helps the reader . . .</p> <p>Which of these best describes how the information in the article is organized?</p> <p>In paragraph #, the author most likely includes examples of _____ to . . .</p>

*Items mapped to this standard will contribute to either the Informational Text or Literary Text reporting category, which is dependent upon the text genre associated with the item.

Reporting Category: Literary Text (48%)**Standards:**

5.LT-C.1 Relate the events and characters in a literary work to information about its setting (e.g., *The Remarkable Journey of Prince Jen* and information about China's T'ang dynasty).

5.LT-G.2 Identify and analyze the characteristics of various genres (poetry, fiction, nonfiction, short story, dramatic literature) as forms with distinct characteristics and purposes.

5.LT-T.3* Identify the theme (moral, lesson, meaning, message, view or comment on life) of a literary selection.

5.LT-F.4 Describe the relationships between major and minor characters; analyze how a character's traits influence that character's actions.

5.LT-F.5 Identify the plot and its components (e.g., main events, conflict, resolution).

5.LT-P.7 Respond to and analyze the effects of the sounds in words (alliteration, onomatopoeia, rhyme scheme), form (free verse, couplets), and figurative language (metaphor, simile) to uncover the meaning of a poem.

5.LT-D.8 Analyze the similarities and differences between a narrative text and its dramatic adaptation.

5.LT-S.9 Identify and draw conclusions about the author's use of sensory details, imagery, and figurative language.

Assessment Stems:

Where did the events in the story take place?

What would be different if the poem _____ were a play?

A. Which of the following statements best expresses the lesson _____ learns in the story?

B. The lesson described in paragraphs #-# shows the importance of . . .

A. _____ can best be described as . . .

B. Describe how _____ feels about _____. Support your answer with important details from the story.

A. Which sentence best summarizes what happens in the story?

B. The main problem _____ faces is . . .

A. The narrator compares _____ to _____ to show that

B. Read lines #-# from the poem in the box below. [lines] What do the lines suggest about _____?

Read this scene.

[a short dramatic stimulus is provided]

How is the scene similar to the passage _____?

In paragraph #, what does _____ mean when he says _____ [word/phrase using figurative language]?

*Items mapped to this standard will contribute to either the Informational Text or Literary Text reporting category, which is dependent upon the text genre associated with the item.

Grade 6

Reporting Category: Language Development (19%)	
<p>Standards:</p> <p>6.LD-V.7 Determine the meaning of unfamiliar words, using knowledge of English language structure, Greek and Latin roots (e.g., annus, aqua), suffixes (e.g., -itis, -osis), and prefixes (e.g., multi-, dis-, anti-, hyper-, syn-).</p> <p>6.LD-V.8 Use such clues as definition, example, and restatement to determine the meanings of unfamiliar words and words with multiple meanings in context.</p> <p>6.LD-V.9 Determine the meaning of figurative language, including similes, metaphors, personification, and grade-appropriate idioms.</p> <p>6.LD-V.10 Determine meanings, pronunciations, alternate word choices, correct spellings, and parts of speech or words using dictionaries, glossaries, thesauri, and other resources (printed and electronic).</p>	<p>Assessment Stems:</p> <p>Read the sentence from paragraph # in the box below. The Latin root _____ means _____. What does the phrase “ _____ ” most likely mean?</p> <p>A. Read this sentence from paragraph # in the passage. As used in the sentence, the word _____ probably means . . .</p> <p>B. Which word means the opposite of _____ in paragraph #?</p> <p>In paragraph # the phrase _____ is used to suggest that . . .</p> <p>Read the dictionary entry in the box below. [dictionary entry] Which definition of _____ is used in sentence # / paragraph #?</p>
Reporting Category: Informational Text (33%)	
<p>6.IT-E.1 Identify and analyze the author’s stated purpose, main ideas, supporting ideas, and supporting evidence.</p> <p>6.IT-E.2 Identify and use knowledge of common textual features (paragraphs, topic sentences, concluding sentences, glossary, index, and bibliography).</p> <p>6.IT-E.3 Identify and use organizational structures in text, including chronological order, comparison and contrast, cause and effect, logical order, and classification schemes.</p>	<p>A. This passage is mostly about . . .</p> <p>B. What does the information in paragraph # suggest about _____?</p> <p>C. Based on the article, explain how _____ has changed. Support your answer with important details from the article.</p> <p>According to the bibliography at the end of the passage, when was _____ published?</p> <p>A. In [paragraph, passage, chart] the author organizes the information according to . . .</p> <p>B. How is the information in the passage organized?</p>

Grade 6

Reporting Category: Informational Text (33%) (continued)

What statement best expresses the main idea of the essay? B. According to paragraph #, what lesson does the author learn about _____ ?</p> <p>Explain how the author foreshadows _____. Support your answer with relevant and specific details/examples from the story.</p> <p>A. [Character] does _____ in order to show that . . . B. Which of these belongs in the blank box? [web]</p> <p>Read this paragraph from the passage. [paragraph] What do the details about _____ mostly emphasize?</p> <p>Explain why the author’s situation described in the essay is ironic. Support your answer with relevant and specific details from the story. Write your answer on the lines in the answer booklet.</p>

Grade 10

Reporting Category: Literary Text (44%) (continued)

Standards:

10.LT-P.8 Identify, respond to, and analyze the effects of the form and dramatic structure of ballads, elegies, sonnets, and heroic couplets.

10.LT-S.10 Analyze the author's use of figurative language, including personification, symbolism, simile, metaphor, hyperbole, allusion, and imagery in a poetry selection.

10.LT-S.11 Evaluate how an author's choice of words advances the theme or purpose of a work.

Assessment Stems:

A. Which of these best states what happens in the poem?

B. Which of these best explains how the poem is structured?

A. What does the author mean when he/she writes _____?

B. The author's image of _____ symbolizes . . .

Read these sentences from paragraph #. [sentences] What is being emphasized by the author's use of repetition?

MATHEMATICS

Reporting Category: Number Sense and Operations (32%)**Standards:**

3.NSO-N.1 Exhibit an understanding of the base 10 number system by reading, modeling, and writing whole numbers to at least 10,000; demonstrate an understanding of the values of the digits.

3.NSO-N.2 Represent, compare, and order numbers to 10,000 using various forms, including expanded notation (e.g., $3,206 = 3 \times 1,000 + 2 \times 100 + 6$) and written out in words (e.g., three thousand two-hundred six).

3.NSO-N.3 Round whole numbers through 10,000 to the nearest 10, 100, and 1,000 (e.g., Round 1,548 to the nearest ten).

3.NSO-N.4 Recognize sets to which a number may belong (odd numbers, even numbers, and multiples of numbers through 10). Identify the numbers in those classes. Example: Find multiples of 7 between 1 and 35 (7, 14, 21, 28, and 35).

3.NSO-F.5 Identify and represent fractions (between 0 and 1 with denominators through 10) as parts of unit wholes and parts of a collection.

3.NSO-F.6 Recognize, name, and use equivalent fractions with denominators 2, 3, 4, and 8; place these fractions on the number line; compare and order them and relate the number line to a ruler (e.g., $\frac{1}{2} = \frac{2}{4} = \frac{4}{8}$).

3.NSO-F.7 Know the meaning of 0.75, 0.50, and 0.25 as they relate to money; know that fractions and decimals are two different representations of the same concept (e.g., 50 cents is what fraction of a dollar? 75 cents is what fraction of a dollar?).

3.NSO-F.8 Know that any fraction can be written as a sum of unit fractions. Example: $\frac{3}{4}$ as a sum of its unit fractions ($\frac{1}{4} + \frac{1}{4} + \frac{1}{4}$).

3.NSO-F.9 Model and represent a mixed number (with denominator 2, 3, or 4) as a whole number and a fraction. Example: Represent $\frac{5}{3}$ as a mixed number.

Assessment Stems:

Which of the following pictures shows _____ tens and _____ ones?

Put the following numbers in order from least to greatest.

Which of the following shows [number] rounded to the nearest hundred?

Diane was playing with the number cards shown below. (Artwork of a series of squares with numbers on them) She picked up all the cards that were multiples of 6. Which of these shows all of the cards that Diane picked up?

What fraction of the [objects] are [a color/size]?

Which of these fractions is equal to $\frac{1}{2}$?

Which of the following amounts represents $\frac{3}{4}$ of a dollar?

Which of these is equal to $\frac{3}{4}$?

Which of these is equal to (Artwork modeling 3 and a half)?

Reporting Category: Number Sense and Operations (32%) (continued)**Standards:**

3.NSO-C.10 Demonstrate an understanding of and the ability to use conventional algorithms for the addition and subtraction of up to five-digit whole numbers (e.g., $85412 - 42747 = ?$ Explain your method).

3.NSO-C.11 Add and subtract up to four-digit whole numbers accurately and efficiently.

3.NSO-C.12 Use concrete objects and visual models to add and subtract common fractions (halves, thirds, fourths, sixths, and eighths) with like denominators.

3.NSO-C.13 Solve problems involving addition and subtraction of money amounts in decimal notation.

3.NSO-C.14 Know multiplication is the result of counting the total number of objects in a set of equal groups (e.g., Write a number sentence for 3 groups of 5 objects).

3.NSO-C.15 Know division (\div) as another way of expressing multiplication, i.e., that division is the inverse of multiplication (e.g., Find other facts related to $2 \times 3 = 6$, such as $6 \div 2 = 3$ or $6 \div 3 = 2$).

3.NSO-C.16 Know multiplication facts through 10×10 and related division facts (e.g., $9 \times 8 = 72$ and $72 \div 9 = 8$). Use these facts to solve related problems (e.g., 3×5 is related to 3×50).

3.NSO-C.17 Solve simple problems involving multiplication of multidigit whole numbers by one-digit numbers.
Example: $2,431 \times 2 = ?$ Explain your method.

3.NSO-C.18 Solve division problems in which a multidigit whole number is evenly divided by a one-digit number.
Example: What is $125 \div 5$?

Assessment Stems:

There are _____ [objects] in total. If you add _____ and then subtract _____, how many [objects] will there now be?

Zoe and Tessa collected stamps. Zoe collected _____ stamps and Tessa collected _____ stamps. How many stamps did they collect all together?

[Artwork of two equally sized rectangles, side by side, each divided into 6 equally sized parts represented as a 2-row \times 3-column array; one has two parts (touching) shaded and one has 1 part shaded]

What is $\frac{2}{6} + \frac{1}{6}$?

What is [dollar amount] + [dollar amount] – [dollar amount]?

(Students are given an image representing a multiplication number sentence.) Which of the following represents how many [objects] there are in total?

Look at the number sentence below. *(Students are given a multiplication number sentence.)* What is another way to write this number sentence? *(Student identifies division number sentence.)*

A. Look at the multiplication fact. _____ .
Which of these is a related division fact?

B. Which multiplication fact is related to _____ ?

[Name] has _____ pages in her sticker collection book. Each page has _____ stickers.

How many stickers does [Name] have in her sticker collection?

Solve.
 $125 \div 5 =$

Grade 3

Reporting Category: Number Sense and Operations (32%) (continued)	
<p>Standards:</p> <p>3.NSO-C.19 Multiply up to two-digit numbers by a one-digit number accurately and efficiently.</p> <p>3.NSO-C.20 Use the commutative (order) and identity properties of addition and multiplication on whole numbers in computations and problem situations (e.g., Multiply 7, 2, and 5. Now multiply them in the order 2, 5, and 7. Do they yield the same answer? Which was easier? Why?).</p> <p>3.NSO-C.21 Know and apply the special properties of 0 and 1 in multiplication.</p> <p>3.NSO-E.23 Estimate the sum and difference of two numbers with three digits (sums up to 1,000) and judge reasonableness of estimates (e.g., Your friend says that $79 - 22 = 27$. Without solving explain why you think the answer is wrong).</p>	<p>Assessment Stems:</p> <p>Solve. (two-digit number) \times (one-digit number) = (Item may also assess student’s ability to solve a multiplication problem as part of a basic word problem.)</p> <p>Look at the number sentence below. . . Which of these goes in the blank to make the number sentence true? <i>(Student identifies commutative property for addition or multiplication number sentence.)</i></p> <p>Look at the number sentence below. $\square \times 45 = 0$ Which of these goes in the box to make the number sentence true?</p> <p>Use estimation to solve [addition or subtraction number sentence].</p>
Reporting Category: Patterns, Relations, and Algebra (18%)	
<p>3.PRA.1 Create, describe, and extend symbolic (geometric) patterns and addition and subtraction patterns.</p> <p>3.PRA.2 Select appropriate operational and relational symbols to make an expression true (e.g., Solve the following: If $4 \underline{\quad} 3 = 12$, what operational symbol goes in the blank?).</p> <p>3.PRA.3 Determine values of variables in simple equations involving addition, subtraction, or multiplication.</p> <p>3.PRA.4 Know and express the relationships among linear units of measure, i.e., unit conversions (e.g., How many feet are in one yard? How many inches are in one foot?).</p> <p>3.PRA.5 Extend and recognize a linear pattern by its rules (e.g., Find the number of legs on 6 dogs).</p>	<p>What is the next [object/number] in the pattern?</p> <p><i>(Students are given a number sentence missing its operational symbol.)</i> What symbol will make the number sentence true?</p> <p><i>(Students are given a number sentence with a missing value.)</i> What number goes in the blank to make the equation true?</p> <p>The length of the [object] is _____ feet. How long is the [object] in inches?</p> <p><i>(Students are given a number pattern.)</i> If the pattern continues, what will be the _____ number in the pattern?</p>

How many different combinations of cones and ice cream can be made?</p>

Reporting Category: Number Sense and Operations (32%)**Standards:**

4.NSO-N.1 Exhibit an understanding of the base 10 number system by reading, modeling, and writing whole numbers to at least 100,000; demonstrating an understanding of the values of the digits; and comparing and ordering the numbers (e.g., Write the number that has 9 ten thousands, 8 hundreds, 6 tens, and 2 ones).

4.NSO-N.3 Round whole numbers to 100,000 to the nearest 10, 100, 1,000, 10,000, and 100,000.

4.NSO-N.4 Recognize sets to which a number may belong (odds, evens, multiples and factors of given numbers, and squares) and use these in the solution of problems.

4.NSO-N.5 Read and interpret whole numbers and decimals up to two decimal places; relate to money and place-value decomposition.

4.NSO-N.7 Find all factors of a whole number up to 50; know that numbers such as 2, 3, 5, 7, and 11 do not have any factors except 1 and itself and that such numbers are called prime numbers.

4.NSO-N.8 Use concepts of negative numbers.

4.NSO-F.9 Demonstrate an understanding of fractions as parts of unit wholes, as parts of a collection, and as locations on a number line.

4.NSO-F.10 Know the relationships among halves, fourths, and eighths and among thirds, sixths, and twelfths; compare and order such fractions.

4.NSO-F.12 Select, use, and explain models to relate common fractions and mixed numbers (e.g., $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{1}{8}$, $\frac{1}{10}$, $\frac{1}{12}$, and $1\frac{1}{2}$); find equivalent fractions, mixed numbers, and decimals.

4.NSO-F.13 Represent positive decimals to the hundredths.

Assessment Stems:

(Students are given a number.) How would you write this number out in words? What number is in the hundreds position?

Which of the following shows [number] rounded to the nearest hundred thousand?

Which of these shows only multiples of 3?

[Name] has 6 dollar bills, 3 quarters and 7 nickels. How much money does [Name] have in all?

Which of these are prime numbers?

Which of these numbers is closest to (negative number) on a number line?

Look at the grid below. What fraction of the grid is shaded?

Which of these shows the fractions in order from least to greatest?

(Students are given _____ blank circles.) How many circles must be shaded so that [a particular fraction] of the circles are shaded?

(Students are given a 10×10 grid where each box in the grid represents 0.01.) What decimal is shown by the shaded part of the grid?

Reporting Category: Number Sense and Operations (32%) (continued)**Standards:**

4.NSO-C.14 Demonstrate an understanding of and the ability to use conventional algorithms for the addition and subtraction of multidigit whole numbers.

4.NSO-C.15 Add and subtract up to five-digit numbers accurately and efficiently.

4.NSO-C.16 Use concrete objects and visual models to add and subtract fractions where the denominators are equal or when one denominator is a multiple of the other (denominators 2 through 12, and 100).

4.NSO-C.18 Know multiplication facts through 12×12 and the inverse division facts. Use these facts to solve related multiplication problems and compute related problems.

4.NSO-C.19 Demonstrate understanding of and ability to use the conventional algorithms for multiplication of up to a three-digit whole number by a two-digit whole number. Multiply three-digit whole numbers by two-digit whole numbers accurately and efficiently.

4.NSO-C.20 Demonstrate understanding of and the ability to use the conventional algorithm for division of up to a three-digit whole number with a single-digit divisor (with or without remainders). Divide up to a three-digit whole number with a single-digit divisor accurately and efficiently. Interpret any remainders.

4.NSO-C.21 Multiply fractions by whole numbers, using repeated addition and area rectangular models.

4.NSO-C.22 Mentally calculate simple products and quotients up to a three-digit number by a one-digit number. Example: 400×7 , or $320 \div 8$.

4.NSO-C.23 Multiply and divide money amounts in decimal notation by using whole-number multipliers and divisors.

Assessment Stems:

Solve the following:

$$[\text{multiple-digit number}] - [\text{multiple-digit number}] =$$

A. What is $[\text{5-digit number}] - [\text{5-digit number}]$?

B. What is $[\text{5-digit number}] + [\text{5-digit number}]$?

(Students are given an image of two grids each partially shaded.)

Which of these models represents the correct total when added/subtracted to/from each other?

Look at the number sentence below.

(Multiplication or division sentence through 12×12)

Which of these belongs to the same fact family as the number sentence?

What is $[\text{3-digit number}] \times [\text{2-digit number}]$?

What is $[\text{3-digit number}] \div [\text{1-digit number}]$?

Which number sentence represents the multiplication problem (whole number) \times (fraction)?

Solve.
 $400 \times 7 =$

(Name) bought (number) [(objects) at (cost)] each.

What was the total cost of the (objects) that (Name) bought?

Reporting Category: Number Sense and Operations (30%)**Standards:**

5.NSO-N.1 Estimate, round, and manipulate very large (e.g., billions) and very small (e.g., thousandths) numbers; demonstrate an understanding of place value to billions and thousandths.

5.NSO-N.2 Represent and compare very large (billions) and very small (thousandths) positive numbers in various forms such as expanded notation without exponents (e.g., $9724 = 9 \times 1000 + 7 \times 100 + 2 \times 10 + 4$).

5.NSO-N.3 Find and position integers, fractions, mixed numbers, and decimals (both positive and negative) on the number line.

5.NSO-N.4 Compare and order integers (including negative integers) and positive fractions, mixed numbers, decimals, and percents.

5.NSO-N.5 Apply the number theory concepts of common factor, common multiple, and divisibility rules for 2, 3, 5, and 10 to the solution of problems. Demonstrate an understanding of the concepts of prime and composite numbers.

5.NSO-N.6 Know the set of prime numbers to 100.

5.NSO-N.7 Determine the prime factors of all numbers through 100 and write the numbers as the product of their prime factors by using exponents to show multiples of a factor (e.g., $24 = 2 \times 2 \times 2 \times 3 = 2^3 \times 3$).

5.NSO-F.8 Explain different interpretations of fractions as a ratio of whole numbers, as parts of unit wholes, as parts of a collection, as division of whole numbers by whole numbers, and as locations on the number line.

5.NSO-F.9 Interpret percents as parts out of 100, use % notation, and express a part of a whole as a percentage.

Assessment Stems:

Look at the following number. [*Insert number that ranges from billions place to thousandths place, e.g., 456,721.38*]. What digit in this number is in the ten thousands place?

Write out the following number in expanded notation. [*Insert number that ranges from billions place to thousandths place, e.g., 93,456,721*].

[Name] plots _____ on a number line. Which of the following number lines shows _____ plotted correctly?

Look at the list of numbers below.

(List of positive/negative integers, fractions, mixed numbers, decimals, and/or percents)

Which of these shows these numbers from least to greatest?

A. What is the greatest common factor of _____ and _____?

B. What is the lowest common multiple of _____ and _____?

Look at the numbers listed below. Which of these numbers is a prime number?

Which of these shows (number) as a product of its prime factors?

(*Students are given an improper fraction.*) Locate this fraction on the number line.

[Name] answered 15 out of 20 of the questions correct on a test. What percentage of questions was answered correctly?

Reporting Category: Number Sense and Operations (30%) (continued)**Standards:**

5.NSO-F.10 Identify and determine common equivalent fractions, mixed numbers (with denominators 2, 4, 5, 10), decimals, and percents and explain why they represent the same value.

5.NSO-F.11 Write improper fractions as mixed numbers, and know that a mixed number represents the number of “wholes” and the part of a whole remaining (e.g., Write $\frac{5}{4}$ as a mixed number; $1\frac{1}{4}$ means “1 plus $\frac{1}{4}$ ”).

5.NSO-C.12 Add with negative integers, subtract positive integers from negative integers, and verify the reasonableness of the results.

5.NSO-C.13 Add and subtract fractions (including mixed numbers) with like and unlike denominators (of 2, 3, 4, 5, 6, and 10), and express answers in the simplest form.

5.NSO-C.14 Add and subtract positive decimals.

5.NSO-C.15 Solve problems involving multiplication and division of any whole number.

5.NSO-C.16 Demonstrate proficiency with division, including division with positive decimals and long division with multidigit divisors.

5.NSO-C.17 Show an understanding of multiplication and division of fractions; multiply positive fractions with whole numbers.

Assessment Stems:

A. Write out two fractions that are equivalent to _____
[insert a fraction with a denominator of 2, 4, 5, or 10].

B. Express _____ [insert a fraction with a denominator of 2, 4, 5, or 10] as a percent.

Which of the following is equal to _____ [insert an improper fraction]?

What is the value of the expression (integer) + (integer)?

Add/Subtract the following fractions: _____ + _____ =

[Name] bought 3 books. The books cost \$7.99, \$12.99, and \$8.59.
What was the total cost of [Name’s] purchase?

What is 720 divided by 12?

What is the value of _____ ÷ _____ ?

What is [fraction] ÷ [fraction]?

Reporting Category: Number Sense and Operations (30%) (continued)**Standards:**

5.NSO-C.18 Simplify fractions in cases when both the numerator and the denominator have 2, 3, 4, 5, or 10 as a common factor. Show that two fractions are or are not equivalent by reducing to simpler forms or by finding a common denominator.

5.NSO-C.19 Multiply positive decimals with whole numbers.

5.NSO-C.20 Demonstrate an understanding of and compute (positive integer) powers of 10 (e.g., 10²); compute examples as repeated multiplication.

5.NSO-C.21 Know integer subtraction is the inverse of integer addition; use the number line to model addition and subtraction of integers and add and subtract integers, with the exception of subtracting negative integers.

5.NSO-C.22 Demonstrate an understanding of how parentheses affect expressions involving addition, subtraction, and multiplication, and use that understanding to solve problems (e.g., Solve $3 \times (4 + 2) = ?$).

5.NSO-E.23 Estimate sums and differences of whole numbers, positive fractions, and positive decimals. Estimate products of whole numbers and products of positive decimals with whole numbers. Use a variety of strategies and judge reasonableness of answers.

Assessment Stems:

Julia, Daniel, and Sam each had a puzzle book. The number of puzzles in each book is shown below.

(A table showing the number of puzzles in each person's puzzle book)

A. Julia solved 1 puzzle in her book. How many puzzles should Daniel solve so that the fraction of the solved puzzles in both their books is the same? In the answer booklet, show your work and write your answer on the line.

B. What fraction of Sam's puzzle book has been completed if he has solved 4 puzzles? Write your answer in the simplest form on the line in the answer booklet.

One flower costs \$1.75. What is the cost of 8 flowers?

A. What is the value of 10⁸ centimeters?

B. Which of these is equal to $10 \times 10 \times 10 \times 10$?

A. Which of these is the same as (positive integer) – (negative integer)?

B. Which of these number lines correctly models (negative number) + (positive integer)?

Solve the following:

$$(9 + 3) \times 6 - 4 =$$

[Name] bought 4 items from a department store. The items were for \$256.95, \$105.36, \$48.50, and \$18.99. What is the estimated total for [Name's] purchase?

Reporting Category: Patterns, Relations, and Algebra (25%)**Standards:**

5.PRA.1 Analyze and determine the rules for extending symbolic, arithmetic, and geometric patterns and progressions (e.g., ABCC...; 1, 5, 9, 13, ...; 3, 9, 27, ...).

5.PRA.2 Replace variables with given values, evaluate and simplify.

5.PRA.3 Use the properties of equality to solve problems with whole numbers (e.g., if $x + 7 = 13$, then $x = 13 - 7$, therefore $x = 6$; if $3 \times F = 15$, then $\frac{1}{3} \times 3 \times F = \frac{1}{3} \times 15$, therefore $F = 5$).

5.PRA.4 Represent real situations and mathematical relationships with concrete models, tables, graphs, and rules in words and with symbols (e.g., input-output tables).

5.PRA.5 Interpret and evaluate mathematical expressions that use parentheses; use parentheses to indicate which operation to perform first when writing expressions containing more than two terms and different operations.

5.PRA.6 Solve problems involving proportional relationships using concrete models, tables, graphs, and paper-pencil methods.

5.PRA.7 Interpret graphs that represent the relationship between two variables in everyday situations.

Assessment Stems:

(Students are given a number pattern.) What rule could be used to find the next number in the pattern?

(Students are given an expression with a variable n .) What is the value of the expression if $n = 6$?

(Students are given an equation with the variable n .) What value of n would make this equation true?

(Students are given a visual representation of a scale with two different expressions with the variable n on each side of the scale.) What would n have to be to keep the scale balanced?

What is the value of the expression below?

$$5 + (3 \times 7) - 6$$

[Name] charges an hourly rate for babysitting. *(Students are given a graph to represent the number of hours she babysits and the amount she charges.)* Based on the graph, how much does [Name] charge for 5 hours of babysitting?

(Students are given a line graph that shows the relationship between the number of hours [Name] worked and the amount of money earned.) How much money did [Name] earn after working for 7 hours?

Reporting Category: Geometry (15%)**Standards:**

5.G.1 Identify polygons based on their properties, including types of interior angles, perpendicular or parallel sides, and congruence of sides (e.g., squares, rectangles, rhombuses, parallelograms, and trapezoids; isosceles, equilateral, and right triangles).

5.G.2 Identify, describe, and compare special types of three-dimensional shapes (e.g., cubes, prisms, spheres, cones, and pyramids) based on their properties, such as edges and faces.

5.G.3 Identify relationships among points, lines, and planes (e.g., intersecting, parallel, perpendicular).

5.G.4 Identify and describe types of symmetry, including line and rotational.

5.G.5 Determine if two triangles or two quadrilaterals are congruent by measuring sides or a combination of sides and angles.

5.G.6 Predict, describe, and perform transformations on two-dimensional shapes (e.g., translations, rotations, and reflections).

5.G.7 Graph points and identify coordinates of points on the Cartesian coordinate plane in the first two quadrants.

Assessment Stems:

Write directions for drawing a parallelogram.

A. How many faces does a hexagonal prism have?

B. Which of the following shapes is a triangular prism?

(Students are given an image with 3 labeled lines. Two of those lines are intersecting, two of those lines are parallel, and two of those lines are perpendicular.) Name the two lines that are perpendicular with one another.

(Students are given an image that contains a design on one half of it.) Complete the design so that the image has a vertical line of symmetry.

Look at the quadrilateral below.

(Artwork of a quadrilateral)

Which of these is congruent to this quadrilateral?

(Students are given a shape with detailed designs.) Which of the following represents the shape after it has been reflected over the reflection line?

(Students are given a map using a coordinate grid where one unit on the grid is equal to one block.) [Name] left his/her house and travelled 3 blocks north and 5 blocks east. What location was [Name] going to?

Reporting Category: Measurement (15%)**Standards:**

5.M.1 Apply the concepts of perimeter and area to the solution of problems involving triangles and rectangles. Apply formulas where appropriate.

5.M.2 Apply formulas for the areas of triangles, rectangles, and parallelograms; recognize that shapes with the same number of sides but different appearances can have the same area.

5.M.3 Solve problems involving proportional relationships and units of measurement.

5.M.4 Identify, measure, and describe circles and the relationships of the radius, diameter, circumference, and area (e.g., $d = 2r$) and use these concepts to solve problems.

5.M.5 Find volumes and surface areas of rectangular prisms.

5.M.6 Know that angles on a straight line add up to 180° , interior angles of a triangle add up to 180° , angles surrounding a point add up to 360° , and interior angles of a quadrilateral add up to 360° ; use these properties to solve problems.

5.M.7 Identify, measure, describe, classify, and draw various angles and triangles, given sides and the angle between them or given two angles and the side between them (e.g., draw a triangle with one right angle and two sides congruent).

Assessment Stems:

[Name] has a rectangular garden. The garden is 6 feet long and 4 feet wide. What is the area of the garden?

A triangle has a height of 5 and a base of 4. What is the area of the triangle?

One package weighs 32 ounces. How many pounds do 4 packages weigh?

Look at the circle.

(Artwork of a circle with radius or diameter provided)

A. Which of these is the circumference of the circle?

B. Which of these is the area of the circle?

(Students are given an image of a rectangular prism with its dimensions.) What is the volume of the rectangular prism?

(Students are given an image of a triangle and the measurements of 2 of the angles.) What is the measurement of the third angle?

(Students are given a triangle with 2 acute angles and 1 right angle.) Which angle is a right angle?

Grade 5

Reporting Category: Data Analysis, Statistics, and Probability (15%)

Standards:

5.DASP.1 Define and apply the concepts of mean to solve problems.

5.DASP.2 Construct, draw conclusions, and make predictions from various representations of data sets, including tables, line graphs, line plots, circle graphs, and bar graphs (where symbols or scales represent multiple units).

5.DASP.3 Predict the probability of outcomes of simple experiments and test the predictions.

Assessment Stems:

[Name] recorded the number of points he/she scored in each basketball game for the first 6 games of the season. What is the average number of points [Name] scored per game?

(Students are given a bar graph that represents favorite types of music among grade 5 students.) How many students chose [genre] as their favorite type of music?

(Students are given an image of a spinner divided into 5 equal sections. _____'s name is in 3 of the sections and _____'s name is in 2 of the sections.) [Name and Name] are playing a game with the spinner shown. Each time the arrow lands on a name, that person earns a point. If [Name] spins the arrow one time, what is the probability that he/she will earn a point?

Reporting Category: Number Sense and Operations (30%)**Standards:**

6.NSO-N.2 Compare and order positive and negative fractions, decimals, and mixed numbers and place them on a number line.

6.NSO-N.3 Know that numbers and their opposites add to 0 and are on opposite sides and at equal distance from 0 on a number line; know that 0 is an integer that is neither negative nor positive.

6.NSO-N.4 Represent rational numbers as repeating or terminating decimals when possible and translate between these representations.

6.NSO-N.5 Identify and determine common equivalent fractions, mixed numbers, decimals, and percentages.

6.NSO-N.7 Round whole numbers and decimals to any given place.

6.NSO-C.8 Select and use appropriate operations to solve problems involving addition, subtraction, multiplication, division, and positive integer exponents with whole numbers and with positive fractions, mixed numbers, decimals, and percentages.

6.NSO-C.9 Know integer subtraction is the inverse of integer addition; use the number line to model addition and subtraction of integers and add and subtract integers.

6.NSO-C.10 Accurately and efficiently add, subtract, multiply, and divide (with multidigit divisors) whole numbers and positive decimals.

6.NSO-C.11 Use prime factorization to add and subtract fractions with like and unlike denominators.

6.NSO-C.12 Accurately and efficiently add, subtract, multiply, and divide positive fractions (including mixed numbers) with like and unlike denominators. Simplify fractions.

6.NSO-C.13 Calculate given percentages of quantities and solve problems involving discounts at sales, interest earned, and tips.

Assessment Stems:

Place the following numbers on a number line:

$$\frac{3}{2}, \frac{3}{4}, \frac{3}{6}, \dots$$

Look at the number sentence below.

$$-100 + \square = 0$$

Which of these numbers should be written in the box to make the number sentence true?

Write $\frac{2}{9}$ as a decimal.

A. Write 3 equivalent fractions for $\frac{4}{12}$.

B. Write $\frac{20}{100}$ as a percent and a decimal number.

What is 6,459,821.891 rounded to the nearest hundred?

[Name] was at a restaurant. The total cost of his/her meal was \$16.00. [Name] left a 20% tip for the server. How much tip did [Name] leave?

In the following equation what is the value of x ?

$$(-9) - (-3) = x$$

Solve the following:

$$9.15 - 6.37 =$$

Solve the following:

$$\frac{4}{6} + \frac{3}{8} =$$

[Name] ate $\frac{1}{3}$ of a pizza and [Name] ate $\frac{5}{12}$ of the same pizza. How much pizza did they eat all together?

[Name's] bill at a restaurant came to \$32.00. He/She left a 15% tip for the server. How much money did the server receive for a tip?

Reporting Category: Number Sense and Operations (28%)**Standards:**

7.NSO-N.1 Compare, order, estimate, and translate among integers, fractions, and mixed numbers (i.e., rational numbers), decimals, and percents.

7.NSO-N.2 Know that in decimal form, rational numbers either terminate or eventually repeat; locate rational numbers on the number line; convert between common repeating decimals and fractions.

7.NSO-N.3 Demonstrate an understanding of absolute value (e.g., $|-3| = |3| = 3$).

7.NSO-N.4 Represent numbers in scientific notation (positive powers of 10 only), and use that notation in problem situations.

7.NSO-N.5 Differentiate between rational and irrational numbers (i.e., know that irrational numbers cannot be expressed as the quotient of two integers and cannot be represented by terminating or repeating decimals).

7.NSO-N.6 Interpret positive whole-number powers as repeated multiplication and negative powers as repeated division or multiplication by the multiplicative inverse. Simplify and evaluate expressions that include exponents.

7.NSO-N.7 Apply number theory concepts, including prime factorization and relatively prime numbers, to the solution of problems (e.g., find the prime factorization of whole numbers, and write the results using exponents:

$$24 = 2 \times 2 \times 2 \times 3 = 2^3 \times 3).$$

7.NSO-N.8 Express ratios in several ways (e.g., 3 cups to 5 people; 3:5; $\frac{3}{5}$); recognize and find equivalent ratios.

7.NSO-N.9 Know the meaning of a square root of a number and its connection to the square whose area is the number.

Assessment Stems:

Order the following from least to greatest: $\frac{3}{4}$, 1.6, 80%, 0.74, $1\frac{1}{2}$.

Which of the following is a rational number?

Which of the following is equivalent to $|-8|$?

The distance that light travels in a year is about 5,680,000,000,000 miles. Express this number in scientific notation.

Which of these is an irrational number?

What is the simplified form of the expression $\frac{x^4y^{-2}}{x^{-9}y^4}$?

Which of these shows the prime factorization of 200?

Which of these is equivalent to the ratio (ratio of two numbers)?

Which square below has a side length of 6 inches?

Reporting Category: Number Sense and Operations (28%) (continued)**Standards:**

7.NSO-C.10 Compute with fractions (including simplification of fractions), integers, decimals, and percents (including those greater than 100 and less than 1) using the four operations and combinations of the four operations.

7.NSO-C.11 Demonstrate an understanding of the properties of arithmetic operations on rational numbers (integers, fractions, and terminating decimals); convert terminating decimals into reduced fractions.

7.NSO-C.12 Select and use appropriate operations—addition, subtraction, multiplication, division, and positive integer exponents—to solve problems with rational numbers and negative integers.

7.NSO-C.13 Calculate the percentage increase and decrease of a quantity.

7.NSO-C.14 Use ratios and proportions in the solution of problems involving unit rates, scale drawings, and reading of maps.

7.NSO-C.15 Take positive and negative rational numbers to positive whole number powers.

Assessment Stems:

Solve $3\frac{3}{4} + 5(\frac{2}{3} - \frac{1}{2})$

Which of the following is equivalent to 7.825?

A. $-51 \div 3 =$

B. 30% of 50 =

C. $-6 \times -7 =$

D. $10\frac{1}{2} - 5\frac{3}{4} =$

[Name] paid \$28.00 for a video game originally marked \$35.00. What percent did [Name] save on the purchase?

The map below shows the locations of Katie's home, Char's home, and the nearest park.

(Artwork with a map showing these three locations, and the distances of a Y-shaped road that connects them. Distances are provided in inches, with a scale conversion of 1 inch = 0.5 mile)

A. What is the total distance, in miles, between Char's home and the park? Show your work in the box in the answer booklet and write your answer on the line.

B. How many more miles away from the park does Katie live than Char? Write your answer on the line in the answer booklet.

Which of these is the value of (rational number to whole number power)?

8.NSO-N.1 Explain the properties of and compute with real numbers expressed in a variety of forms.

8.NSO-N.2 Know that every rational number is either a terminating or repeating decimal and that every irrational number is a nonrepeating decimal.

8.NSO-N.3 Know that the absolute value is the distance of the number from 0; determine the absolute value and additive inverse of real numbers; determine the absolute value of rational numbers.

8.NSO-N.4 Read, write, and compare rational numbers in scientific notation (positive and negative powers of 10) and use them in calculations and problem situations.

8.NSO-N.5 Define, compare, order, and apply frequently used irrational numbers, such as $\sqrt{2\pi}$ and π (e.g., show that if π is known to be irrational, then 3π and $\pi/3$ are also irrational).

8.NSO-N.6 Use the laws of exponents for integer exponents (e.g., write $2^2 \times 2^3$ as $2 \times 2 \times \dots$ and then as a single power of 2; write 2^{-3} as a fraction).

8.NSO-N.7 Determine an understanding of the properties of arithmetic operations on rational numbers.

8.NSO-C.8 Calculate weighted averages such as course grades, consumer price indexes, and sports ratings.

8.NSO-C.10 Solve problems involving derived quantities such as density, velocity, and weighted averages.

8.NSO-C.11 Solve problems that involve markups, commissions, profits, and simple and compound interest.

Assessment Stems:

A. $6\frac{1}{2} \times 3\frac{3}{4}$

B. $-7 - -10$

C. $(2 \times 6) \div \frac{1}{2}$

Which of the following is an irrational number?

What is the absolute value of _____?

3.2×10^4

8.0×10^5

Order the list of numbers below from least to greatest.

Express 97 billion in scientific notation.

Which of these demonstrates the associative property?

Given a table of data and relevant weights, determine the weighted average of the data.

A certain chemical has a density of 2 kilograms per liter. How many liters will it take to have 10 kilograms of the chemical?

Tam made a friendship bracelet. The materials cost \$1.20. If Tam sells the bracelet for 75% more than it cost to make, how much does it sell for?

Reporting Category: Number Sense and Operations (28%) (continued)

Standards:

- 8.NSO-C.12** Apply the rules of powers and roots to the solution of problems.
- 8.NSO-C.13** Use the inverse relationship between squaring and finding the square root of a perfect square integer to solve problems.
- 8.NSO-C.14** Multiply and divide numbers written in scientific notation.
- 8.NSO-C.15** Select and use appropriate operations—addition, subtraction, multiplication, division, and positive integer exponents—to solve problems with rational numbers, including negative rationals.
- 8.NSO-E.16** Estimate and solve problems with square roots; find square roots of perfect squares and approximate the square roots of nonperfect squares by locating them between consecutive integers.
- 8.NSO-E.17** Determine estimates to a certain stated accuracy.

Assessment Stems:

- Look at the expression below.
 $\sqrt{5} \times \sqrt{3^3}$
 Which of these is equal to this expression?
- Kim bought a carpet that is 81 square feet. The carpet’s length and width are the same. How wide is the carpet?
 $(3.2 \times 10^3) \cdot (1.4 \times 10^5) =$
- A. A store is having a sale featuring 20% off all clothing. [Name] finds a shirt originally priced \$52.50. What is the sale price of the shirt before taxes?
 B. Multiply -8×6
 C. Add $1.4567 + 0.05932 + 0.134$
- Which of the following is the best estimate of $\sqrt{20}$?
- Two friends went to a movie. Tickets cost \$7.75 each. At the snack bar, they each bought a soda for \$3.99 and popcorn for \$4.49. Which of these is the best estimate for the total amount of money spent?

Reporting Category: Patterns, Relations, and Algebra (27%)

- 8.PRA.1** Use tables and graphs to represent and compare linear growth patterns. In particular, compare rates of change and x- and y-intercepts of different linear patterns.
- 8.PRA.2** Set up and solve linear equations and inequalities with one or two variables using algebraic methods, models, and graphs.
- 8.PRA.3** Use linear equations to model and analyze problems involving proportional relationships.

- A. Look at the table below. Which equation represents the data shown?
 B. Continue the pattern below.
- A. If $x = 2$, in which of these equations does $y = 7$?
 B. Solve for x: $3x + 14 = 7$
- A box of 34 pens costs \$11.22 at the store. What is the cost of 10 pens?

SCIENCE AND BIOLOGY

Reporting Category: Science and Technology (30%)**Standards:**

- 5.1.1** Evaluate the validity of claims based on the amount and quality of the evidence cited.
- 5.1.2** Explain that predictions can be based on what is known about the past, assuming that conditions are similar.
- 5.1.3** Realize and explain why predictions may be more accurate if they are based on large collections of similar events for statistical accuracy.
- 5.1.4** Determine area and volume of rectangular shapes from linear dimensions, using the expressions $A = l \times w$ and $V = l \times w \times h$.
- 5.2.1** Recognize and describe how results of similar scientific investigations may turn out differently because of inconsistencies in methods, materials, and observations, or because of limitations of the precision of the instruments used.
- 5.2.2** Be able to distinguish inferences from actual observations.
- 5.2.3** Write instructions that others can follow to carry out an investigation.
- 5.2.4** Read and follow step-by-step instructions when learning new investigations.
- 5.2.5** Identify the controlled variable and at least one independent variable in a scientific investigation, when appropriate.

Assessment Stems:

- Students came to the conclusion that [conclusion] after reviewing [data provided]. Explain why their conclusion may be incorrect.
- For the past [number of years] scientists have recorded that when [certain weather conditions] happen most of the [type of crop] that is grown by farmers [description of effect of these weather conditions on the crop]. Which of these is the most likely prediction of what will happen to the [crop] if [weather condition] occurs [certain time of year in current year]?
- Which of these statements describes the kind of data that are needed to make a good prediction about an event?
- The equation for the area (A) of a rectangle is shown below. [Equation] An [object] is [value] long and [value] wide. What is the area of the [object]?
- Two researchers want to know [fact]. After one month, one researcher finds [different result] than the other researcher. Which of these best explains why the two researchers had different results?
- Read about the [type of experiment]. Which of these statements is an inference about the experiment? Which is an observation?
- Which of these statements best describes a good set of instructions for an investigation?
- Below are the steps Amy followed during an investigation. Why might her results not be very accurate?
- Which of these statements best describes a controlled variable in an investigation?

Understand that it is sometimes acceptable to discard data.</p> <p>5.3.1 Give examples of technology, such as telescopes, microscopes, and cameras, that enable scientists and others to observe things that are too small or too far away to be seen without them and to study the motion of objects that are moving very rapidly or are hardly moving.</p> <p>5.3.2 Give examples of advances in technology that have positively and/or negatively affected society.</p> <p>5.3.3 Give examples of materials not present in nature that have become available because of science and technology, such as cloth, metal alloys, plastic, ceramics, and concrete.</p>	<p>Assessment Stems:</p> <p>[A teacher’s] science class is collecting data on [subject of study]. The students decide to use only the average [data] to make it easier to report their results. Which of the following is the most likely problem with this procedure?</p> <p>A. Which of these tools helped scientists to study [a planet]?</p> <p>B. Scientists know [information about an object or objects]. These [objects] are too small/far away to see without a tool. Which of these tools can be used to see [object]?</p> <p>[Brief history about a technological device]. Which of the following statements explains how [technological device] has positively affected society?</p> <p>A. Which of these materials/objects is/is not present in nature?</p> <p>B. Which of these materials/objects is/is not made from a material that is naturally produced on Earth OR made of natural material?</p>
Reporting Category: Earth and Space Science (26%)	
<p>5.4.1 Describe that, like all planets and stars, the Earth is approximately spherical in shape.</p> <p>5.4.2 Observe how telescopes are used both to magnify images of distant objects in the sky, including the moon and the planets, and to gather enough light from very dim objects to make them visible.</p> <p>5.4.3 Observe and describe that stars vary in size, but they are so far away that they look like points of light.</p>	<p>A. Earth is similar in shape to what other objects found in space?</p> <p>B. What is the best way to describe the shape of planets and stars?</p> <p>A. Which of these describes an advantage to using a telescope to see [objects a telescope would be used to observe]?</p> <p>B. Which of these science tools would be the <u>best</u> to use to observe [an object for which a telescope would be used]?</p> <p>A. [Name] is looking at some stars in the night sky. She thinks they look like little points of light. Which of these causes the stars to look like points of light?</p> <p>B. Describe why the sun looks much larger than other stars.</p>

Reporting Category: Earth and Space Science (26%) (continued)**Standards:**

5.5.1 Describe the Earth as part of a system called the solar system, which includes the sun (a star), planets, comets, asteroids, and many moons.

5.5.2 Recognize that the Earth is the third planet from the sun in our solar system.

5.5.3 Demonstrate how the Earth orbits the sun in a year's time, and Earth rotates on its axis about once every 24 hours.

5.5.4 Explain that the alternation between day and night and the apparent movement of the sun, moon, and stars across the sky depend on the rotation of the Earth on its axis.

5.5.5 Explain that the air around us is matter and has weight (a force) and exerts pressure; explain that air pressure varies a little from place to place and from time to time.

5.5.6 Describe that winds blow from areas of higher pressure to areas of lower pressure.

5.5.7 Explain how global patterns, such as the jet stream and ocean currents, influence local weather and climate in ways that can be measured in terms of temperature, pressure, wind direction and speed, and amounts of precipitation.

Assessment Stems:

A. Identify various types of objects that are part of our solar system.
B. Which of these best describes a solar system?

A. Which of these [choices] describes Earth's position from the sun?
B. Which of these [choices] describes where Earth is found in the solar system?

A. Here is model of an event that occurs in our solar system. What does this model represent?

B. Which statement about Earth and the Sun is correct?

A. In these pictures why does the moon appear to move across the sky?

B. What recurring cycle is caused by the rotation of Earth on its axis?

A. [Name] weighs an empty balloon and then gets a different weight after filling the balloon with air. Which of these describes why [Name]'s measurements are different?

B. Which of these describes how air pressure changes as a hiker climbs a mountain?

A weather map is shown. [Picture of weather map w/ compass]

The meteorologist is predicting strong winds. In which direction will the wind most likely be blowing?

A. Which of these will least likely affect the weather in an area?

B. Describe how ocean currents and the wind work together to affect weather patterns.

Grade 5

Reporting Category: Earth and Space Science (26%) (continued)	
<p>Standards:</p> <p>5.6.1 Describe that when liquid water evaporates, it turns into a gas (vapor) mixed into the air, and can condense and reappear as a liquid when cooled or as a solid (ice) if cooled below the freezing point of water.</p> <p>5.6.2 Explain how water moves in air masses from one place to another in the form of clouds, fog, or as invisible water vapor, and falls to the Earth as rain, hail, sleet, or snow.</p> <p>5.6.3 Describe that clouds are made of tiny droplets of water or ice crystals.</p> <p>5.6.4 Explain that water on Earth cycles through different forms and in different locations (e.g., underground water and vapor in the atmosphere).</p> <p>5.6.5 Using maps and globes, recognize that the Earth’s oceans are all connected as one body of water that covers about three-quarters of the Earth’s surface.</p>	<p>Assessment Stems:</p> <p>A. Which picture/of these [choices] shows/is an example of a substance as both a liquid and a gas [or solid] OR a liquid changing to a solid?</p> <p>B. Which of these [pictures] shows that there is water vapor in the air?</p> <p>A. Which of these <u>best</u> describes how water moves from place to place?</p> <p>B. Explain how water from the ocean can fall to Earth as snow in the mountains.</p> <p>A. What are clouds made up of?</p> <p>B. Which of these <u>best</u> explains why some clouds are made of [form of water] and some are made of [form of water]?</p> <p>A. A diagram of the water cycle is shown. [diagram of water cycle] Which form of water is shown [at place indicated on diagram]?</p> <p>B. Which of these <u>best</u> describes how water moves through the water cycle?</p> <p>A. A world map is shown. [world map] Using the map, determine which statement <u>accurately</u> describes the distribution of land and water on Earth.</p> <p>B. Which statement <u>best</u> describes Earth’s oceans?</p>

<p>5.7.1 Recognize that all matter is made of small particles called atoms, which are too small to see with our eyes; describe how atoms may combine to form molecules or crystalline solids (compounds).</p> <p>5.7.2 Recognize that there are more than 100 different kinds of atoms (each called an element), which are displayed on the periodic table of the elements.</p>	<p>A. Which statement <u>best</u> describes matter?</p> <p>B. Which statement <u>best</u> describes atoms?</p> <p>A. Look at the diagram [of the periodic table] below. The diagram shows part of the . . .</p> <p>B. Which of these <u>best</u> describes the difference/a similarity between all of the elements in the periodic table?</p>

Reporting Category: Physical Science (21%) (continued)**Standards:**

5.7.3 Explain that all matter is made up of an element, a compound, or mixtures of elements and compounds.

5.8.1 Describe that heating and cooling cause changes in the properties of substances. For example, liquid water can turn into steam by boiling, and liquid water can turn into ice by freezing.

5.8.2 Explain that many kinds of chemical changes occur faster at higher temperatures.

5.8.4 Describe how some materials conduct heat much better than others, and poor conductors (insulators) can be used to reduce heat loss or gain.

5.9.1 Explain that objects can move with a very wide range of speeds, with some moving very slowly and some moving too quickly for people to see them.

5.9.2 Demonstrate that if the forces acting on an object are balanced so that the net force is zero, the object will remain at rest if it is initially at rest or will maintain a constant speed and direction if it is initially moving.

5.9.3 Describe that unbalanced forces cause changes in the speed and/or direction of motion of an object (acceleration).

5.9.4 Describe that, for an object moving in a straight line, acceleration, a , is the change in velocity, v , divided by the time, t , that change takes ($a = v \div t$).

Assessment Stems:

A. Which of these is all matter made up of?

B. [Object] is shown. [diagram of object] Which of these best describes the [object]?

A. Which of these will help change a [phase] to a [different phase]?

B. Describe what happens to the volume of a given amount of water when it freezes.

A. Which of these causes a chemical change to occur faster?

B. A student observed that a [chemical reaction] at [temperature] took place over [a certain amount of time]. Describe what would happen if the reaction occurred at [higher temperature].

A student needs to choose which container to place his lunch in to keep it cold until lunchtime. [art and descriptions of four containers] Into which container should the student place his lunch?

A. Which of these moves too quickly to see?

B. Which of these moves too slowly to see?

A. [Diagram of two objects leaning against each other]. Which of these statements is true?

B. Which of these best describes what will happen to an object moving at a constant speed if there is no net force acting on it?

[Names] are [moving] forward at the same speed. At one point, [Name 1] accidentally bumps into [Name 2] from the side. Which of these statements best describes what happens to [Name 2's] movement?

[Name] wants to calculate the acceleration of a falling [object]. Which of these pairs of measurements does [Name] need to calculate acceleration?

Grade 5

Reporting Category: Physical Science (21%) (continued)	
<p>Standards:</p> <p>5.9.5 Describe that the greater the net force, F, applied to a body, the greater its acceleration, a. Describe that the greater the mass, m, of an object, the smaller the acceleration produced by a given force.</p> <p>5.9.6 Demonstrate and explain that things on or near Earth are pulled toward Earth’s center by the gravitational force that Earth exerts on them.</p>	<p>Assessment Stems:</p> <p>Jim has an [object] and Julie has an [object]. They each pushed their [objects] across the playground with the same force. Explain why Jim’s [object] went much slower than Julie’s.</p> <p>A. Which statement <u>best</u> describes gravity?</p> <p>B. Which force causes an [object] to fall toward the ground when it is dropped?</p>

<p>5.10.2 Explain that some organisms are made of a collection of similar cells that benefit from cooperating.</p> <p>5.10.3 Explain that in complex organisms such as humans, cells can have a very wide variety of forms and perform very different roles (e.g., nerve cells, muscle cells, and fat cells).</p> <p>5.11.1 Explain why there must be a reliable way to transfer information from one generation to the next in order for offspring to resemble their parents.</p> <p>5.11.2 List some characteristics of plants and animals that are fully inherited (e.g., form of flower, shape of leaves) and others that are affected by the climate or environmental conditions (e.g., browning of leaves from too much sun, language spoken).</p> <p>5.12.1 Explain that in any particular environment, some kinds of plants and animals survive well, some do not survive as well, and some cannot survive at all.</p>	<p>A. Which type of organism has a collection of cells that work together to [biological function]?</p> <p>B. Which statement <u>best</u> explains why some organisms benefit from having more than one cell?</p> <p>A. Which type of cell is responsible for [function]?</p> <p>B. Which statement about the role of cells in the human body is <u>true</u>?</p> <p>A. Which statement <u>best</u> explains why it is important for organisms to pass their genetic traits to their offspring?</p> <p>B. Explain why the offspring of a/an [organism] resembles its parent.</p> <p>A. Which of these characteristics is least likely to be passed on to an [organism] from its parents?</p> <p>B. [Name] has [list of noninheritable traits with one inheritable trait]. Which of these statements describes something [Name] inherited from her parents?</p> <p>A. Describe <u>two</u> different features of [organism] that allow it to survive in [its environment].</p> <p>B. Which set of organisms is adapted to survive in [environment]?</p>

Reporting Category: Life Science (23%) (continued)**Standards:**

5.12.2 Identify organisms that are not native to the Washington, DC, area and how they undergo changes to increase their chance of survival in the area.

5.12.3 Explain how organisms can cause changes in their environment to ensure survival, and these changes may affect the ecosystem (the living and nonliving components of the environment).

5.12.4 Explain that organisms fit enough to survive in a particular environment will typically produce offspring fit enough to survive and reproduce in that particular environment. Over time, these inherited characteristics are carried as the predominant forms (e.g., adaptations such as shape of beak, length of neck, shape of teeth).

5.12.5 Explain how changes in an organism's habitat are sometimes beneficial and sometimes harmful, and how changes in the environment (drought, cold) have caused some plants and animals to die, migrate, or become extinct.

5.12.6 Explain that many plants and animals can survive harsh environments because of seasonal behaviors (e.g., in winter, some trees shed leaves, some animals hibernate).

5.12.7 Recognize that some animal behaviors are instinctive (e.g., turtles burying their eggs, human infants crying when hungry) and others learned (e.g., a wolf's hunting skills, humans' ability to build fires for warmth).

Assessment Stems:

A. An [organism] can [ability]. This organism has this ability because this helps it . . .

B. [Animal] can change color. Describe when this animal will most likely change color and why this is an advantage to the animal.

A. A population of [animal] is growing so quickly that it eats most of the [food] in an area. Which of these statements explains how this may affect other organisms in the area?

B. [Description of a parasite]. Which of these describes the most likely effect of the [parasite] on a host animal?

A. A/An [animal] is successful at [activities related to survival]. Which of these is the most likely result of these characteristics?

B. Which of these statements describes how traits are passed on to the offspring in a population that successfully survives in a changing environment?

A. Which of these describes an impact that [occurrence] can have on [population]?

B. Which of these would probably have the greatest impact on the survival of an [animal] population living in an [area]?

A. [Animal w/fur] lives in [description of that animal's environment]. Which of these behaviors allows [the animal] to survive in [the harsh conditions of the animal's environment]?

B. Explain why [animal] [exhibits certain seasonal behaviors]?

A. [Animals] have instinctive behavior and learned behavior. Which of these is a learned/an instinctive behavior?

B. Describe one instinctive behavior and one learned behavior for a/an [animal].

Reporting Category: Life Science (23%) (continued)**Standards:**

5.12.8 Describe well-defined plant behaviors, such as the way seedlings' stems grow toward light and their roots grow downward in response to gravity.

5.12.9 Examine the information that fossils provide us about living things that inhabited the Earth in the distant past, and describe how they can be compared both to one another and to living organisms according to their similarities and differences.

5.12.10 Recognize and describe how artifacts and preserved remains provide some evidence of the physical characteristics and possible behaviors of human beings and their ancestors who lived long ago.

Assessment Stems:

A. Look at the [plant with specific behavior exhibited]. Which statement best describes the behavior of the plant?

B. The picture shows different plants growing in an ecosystem. Describe two different plant behaviors that are shown in the picture.

A. Diagrams of [fossil] and [animal] are shown. Which of these can scientists learn by comparing these two animals?

B. Look at the [fossil]. Which information can be learned about the organism by observing this fossil?

A. What can scientists learn from remains/fossils of humans and animals that lived long ago?

B. Look at these objects found [location] where scientists are studying. What might these objects teach the scientists?

Reporting Category: Scientific Thinking and Inquiry (18%)**Standards:**

8.1.1 Describe how scientific knowledge is subject to modification and refinement as new information challenges prevailing theories.

8.1.3 Restate or summarize accurately what others have said, asking for clarification or elaboration, and expressing alternative positions.

8.1.4 Identify and criticize the reasoning in arguments in which fact and opinion are intermingled or the conclusions do not follow logically from the evidence given, an analogy is not apt, no mention is made of whether the control group is very much like the experimental group, or all members of a group are implied to have nearly identical characteristics that differ from those of other groups.

8.2.1 Describe how if more than one variable changes at the same time in an experiment, the outcome of the experiment may not be attributable to a change in any single variable.

8.2.2 Write clear step-by-step instructions (procedural summaries) for conducting investigations.

8.2.3 Use tables, charts, and graphs in making arguments and claims in presentations about lab work.

Assessment Stems:

A. Which statement best explains why Pluto is no longer considered a planet?

B. Which of these best describes what will happen to the theory [certain scientific theory] if new information is found that proves that [the current theory is somehow flawed]?

A group of students conducted an investigation about [subject]. The students concluded that [conclusion]. Which of these accurately restates the students' conclusion?

A. A group of scientists published data from an investigation and claimed [statement of opinion]. [Insert data that appears to support the opinion]. Which of these identifies the most important reason fellow scientists may question the scientists' claim?

B. A scientist compared [variable] of two groups of 100 [subject]. After comparing the data from the two groups, the scientist concluded that [statement of conclusion]. Which of these best explains why the conclusion may be inaccurate?

A. [Description of an experiment with more than one manipulated variable]. [Name's] comparison would have been more valid if he had . . .

B. Which of these best explains why there should only be one variable changed in an experiment?

A student plans to investigate [hypothesis]. Describe two different steps the student must include in her investigation.

A. This graph shows [data]. According to the graph, [question asking student to analyze data in the graph]?

B. Study the time line/chart below. According to the chart, [question asking student to analyze data in the time line/chart]?

Grade 8

Reporting Category: Scientific Thinking and Inquiry (18%) (continued)	
<p>Standards:</p> <p>8.2.4 Read analog and digital meters on instruments used to make direct measurements of length, volume, weight, elapsed time, rates, or temperatures, and choose appropriate units. Explain how to interpolate on analog scales.</p> <p>8.2.5 Explain why arguments may be invalid if based on very small samples of data, biased samples, or experiments in which there was no control sample.</p>	<p>Assessment Stems:</p> <p>A. A student measured the temperature of three beakers of water left in different locations around the classroom. Which of these lists the <u>correct</u> temperature and units shown on each thermometer?</p> <p>B. A student used analog scales to measure the length/volume/weight of a/an [object]. Explain how to interpolate measurements taken on an analog scale, and why this is necessary.</p> <p>Which of these <u>best</u> explains why the results of an investigation may be invalid when there is no control sample?</p>
Reporting Category: Matter and Reactions (42%)	
<p>8.3.1 Explain that all matter is made up of atoms that are far too small to see directly through an optical microscope.</p> <p>8.3.2 Construct a model of an atom and know the atom is composed of protons, neutrons, and electrons.</p> <p>8.3.4 Know that density is mass per unit volume.</p> <p>8.3.5 Explain that equal volumes of different substances usually have different masses and, therefore, different densities.</p> <p>8.3.6 Determine the density of substances (regular and irregular solids, and liquids) from direct measurements of mass and volume, or of volume by water displacement.</p> <p>8.4.1 Using a periodic chart, explain that the atoms of any element are similar to each other, but they are different from atoms of other elements. Know that the atoms of a given isotope are identical to each other.</p>	<p>A. Which statement about atoms is <u>true</u>?</p> <p>B. Which of these is the basic building block for all matter?</p> <p>An atom of [element] has [protons] and a charge of [charge]. How many electrons does an atom of [element] have?</p> <p>Which of these measurements represents an object with the highest density?</p> <p>A student has equal volumes of [substance 1] and [substance 2]. Which statement about the mass and density of the two substances is <u>true</u>?</p> <p>An [irregular solid, regular solid] has a mass of [mass] and volume of [volume]. What is the density of the [substance]?</p> <p>A. Identify one property that [isotope of element] and [different isotope of same element] have in common.</p> <p>B. Which of these describes a way that atoms of one element are different from atoms of another element?</p>

Reporting Category: Matter and Reactions (42%) (continued)**Standards:**

8.4.2 Describe how elements can be classified, based on similar properties, into categories, including highly reactive metals, less reactive metals, highly reactive nonmetals, less reactive nonmetals, and some almost completely non-reactive (noble) gases.

8.5.1 Diagram and describe how atoms may combine (bond) into molecules or into large crystalline arrays.

8.5.2 Know that there are more than 100 elements that combine in a multitude of ways to produce compounds that make up all the living and nonliving things in the universe.

8.5.3 Understand how an ion is an atom or group of atoms (molecule) that has acquired an electric charge by losing or gaining one or more electrons.

8.6.1 Describe how the atoms, molecules, or ions comprising an object are in constant individual motion, and explain how their average motional (kinetic) energy determines the temperature of the object, and how the strength of the forces between them determines the state of matter at that temperature.

8.6.2 Explain that the melting and boiling temperatures of a substance (element or compound) depend on pressure and are independent of the amount of the sample. (Some materials do not melt and others do not boil because they decompose as the temperature is raised; other materials do not have a sharp melting point because they are not homogeneous.)

8.7.1 Describe Law of Conservation of Matter, using the idea that when materials react with each other, many changes can take place, but that in every case the total amount of matter afterward is the same as before.

Assessment Stems:

A. Which list of elements shares the same classification?

B. Which element is classified as a noble gas/highly reactive metal/nonmetal?

A. Which diagram shows how the atoms of [molecule] bond?

B. Which statement best describes how atoms combine to form [molecule]?

A. About how many elements have been discovered?

B. Which statement about elements is true?

An ion of [element] has a charge of [charge] and takes one electron from a neutral atom of [element]. Which of these shows the final charge on the [element] ion?

A. In which of these substances are molecules most free to move around?

B. Which of these best describes the reaction of water molecules to heat?

A. A student is investigating the melting/boiling temperature of [element/compound]. She places [quantity] in beaker 1 and [quantity] in beaker 2 and heats them for the same length of time over the same size of flame. Which statement about the melting/boiling temperature of [element/compound] is true?

B. Which of these explains why the boiling temperature of [substance] is different at high and low altitudes?

A. Which of these accurately describes how the conservation of matter affects [chemical reaction]?

B. Which of these describes an experiment that would prove that the law of conservation of matter is true?

Reporting Category: Matter and Reactions (42%) (continued)**Standards:**

8.7.2 Explain how the idea of atoms explains the conservation of matter: In chemical reactions, the number of atoms stays the same no matter how they are arranged, and the mass of atoms does not change significantly in chemical reactions, so their total mass stays the same.

8.8.1 Explain how elements and compounds (reactants) react with each other to form products with different properties.

8.8.2 Explain how during endothermic chemical reactions heat energy is absorbed from the surroundings, and in exothermic reactions heat energy is released to the surroundings.

8.8.3 Explain that reactions occur at different rates, slow to fast, and that reaction rates can be changed by changing the concentration of reactants, the temperature, the surface areas of solids, and by using catalyst.

8.8.4 Recognize that solutions can be acidic, basic, or neutral, depending on the concentration of hydrogen ions in the solution. Understand that because this concentration can vary over a very large range, the logarithmic pH scale is used to describe how acidic or basic a solution is (each increase of one in the pH scale is an increase of 10 times in concentration).

8.8.5 Recognize that indicators of chemical changes include temperature change, the production of gas, the production of a precipitate, or a color change.

Assessment Stems:

A. Which of these does not stay the same during a chemical reaction?

B. Which of these best describes how the idea of atoms explains the conservation of matter?

[Element/compound 1] is [property]. [Element/compound 2] is [property]. Describe the properties of [product of the reaction between element/compound 1 and element/compound 2] and explain why they are different from those of [element/compound 1] and [element/compound 2].

Which of these types of reactions absorbs heat from/gives off heat to the surroundings?

A. How do low temperatures affect the speed of chemical reactions?

B. [Details about a chemical reaction] as shown in the equation below. [Equation] Which of these best describes what will happen if the temperature at which this reaction takes place is increased?

A. Which of these best describes why the pH scale is used to describe how acidic or basic a solution is?

B. [Chart of pH values for various substances] [Substance] has a pH of about [value]. What acid in the chart would neutralize [substance] when both are used in equal volumes?

A. Which of these proves that a chemical change has taken place?

B. In which of these [scenarios] has a chemical change taken place?

Reporting Category: Forces (18%)**Standards:**

8.10.1 Explain that every object exerts an attractive gravitational force on every other object.

8.10.2 Demonstrate that the mass of an object is a measure of the quantity of matter it contains (measured in kg or g), and that its weight (measured in N) is the magnitude of the gravitational force exerted between Earth and that much mass.

8.10.3 Determine and explain that the buoyant force on an object in a fluid is an upward force equal to the weight of the fluid the object has displaced; this principle can be used to predict whether an object will float or sink in a given fluid.

8.11.1 Recognize that a force has both magnitude and direction.

8.11.2 Observe and explain that when the forces on an object are balanced (equal and opposite forces that add up to zero), the motion of the object does not change.

8.11.3 Explain why an unbalanced force acting on an object changes the object's speed or direction of motion or both.

8.11.4 Know that the greater the mass of an object, the more force is needed to change its motion.

8.11.5 Apply simple mathematical models to problems (e.g., formulas such as $F = ma$, $d = st$).

Assessment Stems:

A. Describe two different attractive forces that act on the Moon and explain why one is stronger than the other.

B. Which statement explains why two objects in a vacuum are attracted to each other?

A. How are the mass and the weight of an object different from each other?

B. What is mass and in what units is it measured?

[Names] are investigating [material]. They measured the mass and volume of [two or more types of the material] and recorded their data in the table below. [Table] The density of water is 1.0 gram per milliliter. If both [materials] are placed in water, which of these results will the students observe?

What information is necessary to calculate the force acting on an object?

A. An [object] is moving through space at a constant speed. If no outside force interacts with the [object], which of these is true about its motion?

B. Which of these best describes the forces acting on an object moving at a constant velocity?

If two people are pushing in opposite directions on an object with an unequal force, how will the motion of the object change?

A force is applied to an [object] that causes the [object] to move across the floor with a constant acceleration. Which of these describes the motion of an [object] with twice the mass of the first [object] if the same force is applied?

The formula used to convert [change in units] is shown below. [Equation] If the [physical property] is [value], what is the [physical property] in [different type of units]?

Grade 8

Reporting Category: Forces (18%) (continued)	
<p>Standards:</p> <p>8.11.6 Explain that if the net force acting on an object always acts toward the same center as the object moves, the object’s path is a curve about the force center. (Motion in a circular orbit is the simplest example of this concept.)</p> <p>8.11.7 Plot and interpret distance versus time graphs for constant speed.</p>	<p>Assessment Stems:</p> <p>A. Which of these <u>correctly</u> explains why a satellite’s orbit is always around the center of Earth?</p> <p>B. When a person ties an [object] to a string and spins it in a circle, which of these correctly describes the forces on the [object]?</p> <p>Look at the table showing the motion of an [object]. Which of these graphs <u>correctly</u> represents the motion of the object?</p>
Reporting Category: Energy and Waves (22%)	
<p>8.12.1 Explain how energy is the ability to do work and is measured in joules (J).</p> <p>8.12.2 Describe kinetic energy as the energy of motion (e.g., a rolling ball), and potential energy as the energy of position or configuration (e.g., a raised object or a compressed spring).</p> <p>8.12.3 Recognize and describe that energy is a property of many systems and can take the forms of mechanical motion, gravitational energy, the energy of electrostatic and magnetostatic fields, sound, heat, and light (electromagnetic field energy).</p> <p>8.12.4 Describe that energy may be stored as potential energy in many ways, including chemical bonds and in the nucleus of atoms.</p> <p>8.12.5 Explain that the sun emits energy in the form of light and other radiation, and only a tiny fraction of that energy is intercepted by the Earth.</p> <p>8.12.6 Know that the sun’s radiation consists of a wide range of wavelengths, mainly visible light, infrared, and ultraviolet radiation.</p>	<p>Which of these statements <u>correctly</u> describes the relationship between energy and work?</p> <p>Which of these <u>best</u> describes an example of kinetic energy/potential energy?</p> <p>A. A [device] converts electrical energy into which kinds of energy? B. A battery can be used to make an electromagnet. Describe how chemical energy from the battery is eventually converted into mechanical energy. (Include a description of electrostatic and magnetostatic fields in your answer.)</p> <p>A. Which of these does <u>not</u> describe potential energy? B. Chemical energy, nuclear energy, and the energy of an object at a height are all examples of what?</p> <p>Which statement <u>correctly</u> compares the amount of the Sun’s energy that reaches Earth with the amount of the energy that the Sun actually emits?</p> <p>A. [Name] is looking at the colors of light produced by sunlight passing through a glass prism. Which of these colors that [Name] sees has the longest wavelength? B. How can exposure to the sun’s ultraviolet radiation be harmful?</p>

Reporting Category: Energy and Waves (22%) (continued)**Standards:**

8.15.1 Explain how kinetic energy can be transformed into potential energy and vice versa (e.g., in a bouncing ball).

8.15.2 Explain that heat energy is a common product of an energy transformation, such as in biological growth, the operation of machines, the operation of a light bulb, and the motion of people.

8.15.3 Explain how electrical energy can be generated using a variety of energy sources and can be transformed into almost any other form of energy, such as mechanical motion, light, sound, or heat.

8.15.4 Compare and contrast how heat energy can be transferred through radiation, convection, or conduction.

8.16.1 Explain that in processes at the scale of atomic size or greater, energy cannot be created or destroyed but only changed from one form into another.

Assessment Stems:

Which of these correctly lists all of the energy transformations that occur when a spring is compressed and then released?

Several students walk into a cold classroom. After several minutes, they feel as though the temperature in the room has increased.

Which of these statements best describes why the room feels warmer to the students?

A. Which of these is not used to generate electrical energy?

B. Which machine/tool transforms electrical energy into [mechanical/light/sound/heat] energy?

Which of these best describes how energy is transferred when a pot of water is heated on a stove?

A. Which of these best describes what happens to the energy of an [object] as it falls out of a tree?

B. Which of these describes a situation in which energy can be destroyed?

BIOLOGY

Reporting Category: Cell Biology and Biochemistry (29%)

Standards:

- B.1.1** Describe basic atomic structure using simplified Bohr diagrams to understand the basis of chemical bonding in covalent and ionic bonds.
- B.1.2** Describe the structure and unique properties of water and its importance to living things.
- B.1.3** Describe the central role of carbon in the chemistry of living things because of its ability to combine in many ways with itself and other elements.
- B.1.4** Know that living things are made of molecules largely consisting of carbon, hydrogen, nitrogen, oxygen, phosphorus, and sulfur.
- B.1.5** Know that living things have many different kinds of molecules, including small ones such as water; midsize ones such as sugars, amino acids, and nucleotides; and large ones such as starches, proteins, and DNA.
- B.2.1** Describe that all organisms begin their life cycles as a single cell, and in multicellular organisms the products of mitosis of the original zygote form the embryonic body.
- B.2.2** Compare and contrast the general anatomy and constituents of prokaryotic and eukaryotic cells and their distinguishing features: Prokaryotic cells do not have a nucleus, and eukaryotic cells do. Know that prokaryotic organisms are classified in the Eubacteria and Archaeobacteria Kingdoms and that organisms in the other four kingdoms have eukaryotic cells.

Assessment Stems:

- A. Which of these statements best describes why an ionic bond occurs between two elements?
- B. Based on the [Bohr diagram], [atom] started with . . .
- Which of these statements about the properties of water is not correct?
- A. Which of these elements is essential to the makeup of all living things because of its ability to [quality of carbon]?
- B. Which of these statements about carbon is true/false?
- A. Which of these elements is least likely to be found in molecules that make up living things?
- B. Which of these groups contains elements that can all be found in molecules that make up living things?
- A. Which of these is a large molecule found in living things?
- B. Which of these groups lists the molecules found in living things correctly from smallest to largest?
- A. Which of these statements about organisms is true?
- B. An embryo grows from the size of one cell to numerous cells through the process of . . .
- A. [Diagram or description of different types of cells].
- Which cell could be a normal body cell from an [organism]?
 - Which of the cells contains [organelle]?
- B. Look at the cells below. [Illustration of two cells] Which of these is a major difference between these cells?

BIOLOGY

Reporting Category: Cell Biology and Biochemistry (29%) (continued)

Standards:

B.2.4 Explain that some structures in the eukaryotic cell, such as mitochondria, and in plants, such as chloroplasts, have apparently evolved by endosymbiosis (one organism living inside another, to the advantage of both) with early prokaryotes.

B.2.5 Describe that all growth and development of organisms is a consequence of an increase in cell number, size, and/or products.

B.3.1 Observe and explain the role of enzymatic catalysis in biochemical processes.

B.3.2 Understand the function of cellular organelles and how the organelles work together in cellular activities (e.g., enzyme secretion from the pancreas).

B.3.3 Demonstrate that most cells function best within a narrow range of temperature and pH; extreme changes usually harm cells by modifying the structure of their macromolecules and, therefore, some of their functions.

B.3.6 Explain the photosynthesis process: Plants make simple sugars and other molecules in their leaves, and chlorophyll found in the leaves can make the food and nutrients that the plant can use from carbon dioxide, water, nutrients, and energy from sunlight.

B.3.7 Recognize and describe that cellular respiration is important for the production of adenosine triphosphate (ATP), which is the basic energy source for cell metabolism.

B.4.1 Explain the hierarchical organization of living things from least complex to most complex (subatomic, atomic, molecular, cellular, tissue, organs, organ system, organism, population, community, ecosystem, and biosphere).

Assessment Stems:

How are mitochondria and chloroplasts different from other structures within a cell?

A. An increase in cell number, size, and/or products could all lead to which of these natural processes?

B. Describe two ways that cells can cause a(n) [organism] to grow.

Which of these substances will most likely increase the rate of [a biochemical reaction]?

A. Which of these best describes the function of [organelle] in a cell?

B. Which of these explains how [organelle] works with [organelle] in [cellular activity]?

A. Most cells function best if which two factors remain within certain levels?

B. If extreme changes are made in the temperature or pH of a cell's environment, which of these will most likely be affected in the cell?

Which of these is the original source of energy for photosynthesis?

Which of these is the basic source of energy for cell metabolism?

Which of these shows the organization of a living thing from least complex to most complex?

BIOLOGY

Reporting Category: Cell Biology and Biochemistry (29%) (continued)	
<p>Standards:</p> <p>B.4.2 Observe and describe that within the cell are specialized parts for the transport of materials, energy capture and release, waste disposal, and motion of the whole cell or of its parts.</p> <p>B.4.3 Describe the organelles that plant and animal cells have in common (e.g., ribosomes, golgi bodies, endoplasmic reticulum) and some that differ (e.g., only plant cells have chloroplasts and cell walls).</p> <p>B.4.4 Describe that the work of the cell is carried out by structures made up of many different types of large (macro) molecules that it assembles, such as proteins, carbohydrates, lipids, and nucleic acids.</p> <p>B.4.5 Explain that a complex network of proteins provides organization and shape to cells.</p> <p>B.5.1 Explain how layers of energy-rich organic material, mostly of plant origin, have been gradually turned into great coal beds and oil pools by the pressure of the overlying Earth and its internal heat.</p>	<p>Assessment Stems:</p> <p>A. Which of these structures within a cell is responsible for energy capture and release?</p> <p>B. [Diagram of typical cell with arrow pointing to one specific organelle]. Identify this specialized structure found within [organism] cells and describe its function.</p> <p>Which of these <u>best</u> describes one way that animal cells are different from plant cells?</p> <p>Some antibiotics work by blocking the bacterial cell's protein synthesis. Identify one protein that bacterial cells synthesize and explain why the protein is necessary for the cell's survival.</p> <p>Which type of molecule creates complex networks within cells and is largely responsible for a cell's shape and organization?</p> <p>Which pair of factors is most responsible for the formation of coal beds beneath Earth's surface?</p>
Reporting Category: Genetics and Evolution (31%)	
<p>B.6.1 Research and explain the genetic basis for Gregor Mendel's laws of segregation and independent assortment.</p> <p>B.6.2 Investigate and describe how a biological classification system that implies degrees of kinship between organisms or species can be deduced from the similarity of their nucleotide (DNA) or amino acids (protein) sequences. Know that such systems often match the completely independent classification systems based on anatomical similarities.</p> <p>B.6.3 Explain how the actions of genes, patterns of inheritance, and the reproduction of cells and organisms account for the continuity of life.</p>	<p>Which of these best describes the genetic basis for Gregor Mendel's law of segregation?</p> <p>The classification chart below shows how closely related four species are to each other. [Chart] According to the chart, which of these is the <u>best</u> conclusion about the species?</p> <p>Describe the mechanisms that enable traits to be passed down through many generations of humans. Explain why this is important.</p>

BIOLOGY

Reporting Category: Genetics and Evolution (31%) (continued)

Standards:

B.6.4 Investigate and explain how molecular evidence reinforces and confirms the fossil, anatomical, behavioral, and embryological evidence for evolution, and provides additional detail about the sequence in which various lines of descent branched off from one another.

B.6.5 Explain Gregor Mendel's identification of what we now call genes, how they are sorted in reproduction, and how this led to an understanding of the mechanism of heredity. Understand how the integration of his concept of heredity and the concept of natural selection has led to the modern model of speciation and evolution.

B.7.1 Describe how the discovery of the structure of DNA by James D. Watson and Francis Crick made it possible to interpret the genetic code on the basis of a nucleotide sequence. Know the important contribution of Rosalind Franklin's data to this discovery (i.e., the careful X-ray crystallography on DNA that provided Watson and Crick the clue they needed to build the correct structure).

B.7.2 Explain how hereditary information is passed from parents to offspring in the form of genes, which are long stretches of DNA consisting of sequences of nucleotides. Explain that in eukaryotes, the genes are contained in chromosomes, which are bodies made up of DNA and various proteins.

B.7.4 Explain how biological evolution is also supported by the discovery that the genetic code found in DNA is the same for almost all organisms.

B.7.5 Differentiate between the functions of mitosis and meiosis. Mitosis is a process by which a cell divides into each of two daughter cells, each of which has the same number of chromosomes as the original cell. Meiosis is a process of cell division in organisms that reproduce sexually, during which the nucleus divides eventually into four nuclei, each of which contains half the usual number of chromosomes.

Assessment Stems:

Which of these describes molecular evidence that best supports the Theory of Evolution?

A. The modern model of speciation and evolution arose from the integration of which of these two concepts?

B. Describe what Gregor Mendel discovered about genes and how they are sorted in reproduction.

Which of these discoveries made it possible for scientists to interpret the genetic code on the basis of a nucleotide sequence?

A biological molecule is shown below. [Illustration of part of a double helix] Which of these is true about this molecule in eukaryotes?

[Name] is doing research for a science project and finds that the genetic code found in DNA is the same for almost all organisms. Which of these concepts does [Name]'s data best support?

A. The picture shows a parent cell with [number] chromosomes. Which of these shows the daughter cells that will result after the parent cell goes through one complete cycle of mitosis/meiosis?

B. The diagram below shows a type of cell division that happens in humans. Identify the process shown in the diagram. Describe the purpose of this type of cell division in humans.

BIOLOGY

Reporting Category: Genetics and Evolution (31%) (continued)

Standards:

B.7.6 Explain how zygotes are produced in the fertilization process.

B.8.1 Explain the flow of information is usually from DNA to RNA, and then to protein.

B.8.2 Explain how the genetic information in DNA molecules provides the basic form of instructions for assembling protein molecules and that this mechanism is the same for all life forms.

B.8.3 Understand and explain that specialization of cells is almost always due to different patterns of gene expression, rather than differences in the genes themselves.

B.9.1 Understand and describe how inserting, deleting, or substituting short stretches of DNA alters a gene. Recognize that changes (mutations) in the DNA sequence in or near a specific gene may (or may not) affect the sequence of amino acids in the encoded protein or the expression of the gene.

B.9.2 Explain the mechanisms of genetic mutations and chromosomal recombinations, and when and how they are passed on to offspring.

B.9.3 Explain how the sorting and recombination of genes in sexual reproduction result in a vast variety of potential allele combinations in the offspring of any two parents.

Assessment Stems:

Describe the human fertilization process beginning with the movements of the egg and sperm cells within the body of the female. Be sure to name and describe the first cell that is produced by this process.

Describe in the correct order the flow of genetic information that results in the formation of a protein.

Amino acids linked together in a chain create a polypeptide. One or more polypeptides makes a functional protein. Which of these provides the instructions for the assembly of a protein?

Explain why heart cells and skin have the same genes but look and function so differently from each other.

Describe three different ways a scientist could alter a strand of DNA and discuss how each change could affect the organism in which this change takes place.

Which diagram shows an example of a genetic mutation?

In [an organism], there are two alleles for [trait]. There are also two alleles for [other trait]. Two plants that are heterozygous/homozygous for both of these traits are crossed. Which of these Punnett squares correctly shows the genotypes that could result from this cross?

BIOLOGY

Reporting Category: Genetics and Evolution (31%) (continued)

Standards:

B.9.4 Explain that genetic variation can occur from such processes as crossing over, jumping genes, and deletion and duplication of genes.

B.10.1 Describe how life on Earth is thought to have begun as one or a few simple one-celled organisms about 3.5 billion years ago, and that during the first 2 billion years, only single-cell microorganisms existed. Know that, once cells with nuclei developed about a billion years ago, increasingly complex multicellular organisms could evolve.

B.10.3 Research and explain that Darwin argued that only biologically inherited characteristics could be passed on to offspring, and that some of these characteristics would be different from the average and advantageous in surviving and reproducing; over generations, accumulation of these inherited advantages would lead to a new species.

B.10.4 Explain that evolution builds on what already exists, so the more variety there is, the more there can be in the future.

B.11.1 Explain how a large diversity of species increases the chance that at least some living things will survive in the face of large or even catastrophic changes in the environment.

B.11.2 Research and explain how natural selection provides a mechanism for evolution and leads to organisms that are optimally suited for survival in particular environments.

B.11.3 Explain that biological diversity, episodic specification, and mass extinction are depicted in the fossil record, comparative anatomy, and other evidence.

Assessment Stems:

Which of these involves the exchange of chromatid segments between chromosomes?

A. Which of these best describes how life is thought to have begun on Earth?

B. Which of these developments was necessary so that multi-cellular organisms could evolve?

Which of these best describes Darwin's theory on how a new species comes to be?

Which of these statements best describes why some populations have greater variation among individuals than other populations?

How does the amount of diversity observed within a species affect its chance for survival in the event of a sudden change in the environment?

Identify one trait of the [organism] that is most likely to have evolved through the process of natural selection. Explain how this trait makes [organism] optimally suited for survival in [organism's native environment].

How does comparative anatomy support the idea that new species have evolved from older ones?

BIOLOGY

Reporting Category: Multicellular Organisms: Plants and Animals (20%)

Standards:

B.12.1 Describe the structure and function of roots, leaves, flowers, and stem of plants.

B.12.2 Know that about 250,000 species of flowering plants have been identified.

B.12.4 Recognize that plants have a greater problem with unpredictable environments because they cannot seek shelter as many animals can.

B.13.1 Identify the roles of plants in the ecosystem: Plants make food and oxygen, provide habitats for animals, make and preserve soil, and provide thousands of useful products for people (e.g., energy, medicines, paper, resins).

B.13.2 Describe that plants have broad patterns of behavior that have evolved to ensure reproductive success, including co-evolution with animals that distribute a plant's pollen and seeds.

B.14.1 Explain the major systems of the mammalian body (digestive, respiratory, reproductive, circulatory, excretory, nervous, endocrine, integumentary, immune, skeletal, and muscular) and how they interact with each other.

B.15.1 Analyze the complementary activity of major body systems, such as how the respiratory and circulatory systems provide cells with oxygen and nutrients, and remove toxic waste products such as carbon dioxide.

B.15.2 Explain how the nervous system mediates communication between different parts of the body and the environment.

B.15.3 Describe that the nervous and endocrine systems maintain overall regulation of optimal conditions within the body by chemical communication.

Assessment Stems:

Which of these statements best describes why [part of plant] is important?

Of the known plant species, approximately how many are flowering?

Which of these organisms would have the hardest time dealing with sudden harsh environmental changes?

A. Which of these statements describes a role of plants in an ecosystem?

B. Which product is made from plants?

Describe how [animals] help [plants] reproduce, and explain one benefit that the [plants] provide to the [animals].

Which of these best explains why [organ or organ system] is such an important part of the body?

Which of these describes how two body systems are involved in [major function]?

Identify and explain how the body system responsible for alerting the [organism] to [environmental change] functions.

The secretion of [hormone] by [gland] causes [function]. Which two body systems must communicate in order for [hormone] to cause [function]?

BIOLOGY

Reporting Category: Multicellular Organisms: Plants and Animals (20%) (continued)

Standards:

B.15.4 Investigate and cite specific examples of how the mammalian immune system is designed to protect against microscopic organisms and foreign (or nonself) substances from outside the body and against some aberrant (e.g., cancer) cells that arise within.

Assessment Stems:

- A. Which type of cell is responsible for attacking pathogens in the body?
- B. Which of these body systems is responsible for creating a fever in response to an infection?

Reporting Category: Ecosystems (20%)

B.17.1 Illustrate and describe the cycles of biotic and abiotic factors (matter, nutrients, energy) in an ecosystem.

Which of these is an abiotic/biotic factor in the [type of cycle]?

B.17.2 Describe how factors in an ecosystem, such as the availability of energy, water, oxygen, and minerals, and the ability to recycle the residue of dead organic materials, cause fluctuations in population sizes.

Which of these environmental factors is most likely to cause an increase in the population size of [species]?

B.17.3 Explore and explain how changes in population size have an impact on the ecological balance of a community and how to analyze the effects.

[Information about an organism’s relationship with other organisms in its environment] Which of these would most likely result due to the decline of the [organism]?

B.17.4 Describe how the physical or chemical environment may influence the rate, extent, and nature of the way organisms develop within ecosystems.

[Species] has developed [physical adaptation or behavioral pattern based on physical environment]. This is most likely due to which of these environmental factors?

B.18.1 Describe how ecosystems can be reasonably stable over hundreds or thousands of years.

Explain two factors that might threaten an ecosystem’s stability.

B.18.2 Explain that ecosystems tend to have cyclic fluctuations around a state of rough equilibrium, and change results from shifts in climate, natural causes, human activity, or when a new species or non-native species appears.

A. Certain laws in the United States prohibit the release of non-native species of [organism] because . . .

B. Considering the advances in [human activity], which of these is the best reason for a country to [environmental policy]?

BIOLOGY

Reporting Category: Ecosystems (20%) (continued)

Standards:

B.19.1 Investigate and describe how point and nonpoint source pollution can affect the health of a bay's watershed and wetlands.

B.19.2 Assess the method for monitoring and safeguarding water quality, including local waterways such as the Anacostia and Potomac rivers, and know that macroinvertebrates can be early warning signs of decreasing water quality.

Assessment Stems:

Describe the difference between nonpoint source pollution and source pollution and explain why one of these is more difficult to regulate.

A. Which qualities of water can be monitored to assess water quality?

B. Why is it important to assess water quality?

DC CAS Scoring Tools

On the following pages are the rubrics used to score student responses to constructed-response (CR) items on the DC CAS. Holistic rubrics are used for scoring reading, mathematics, and writing CRs. Science CRs are scored according to the criteria of item-specific scoring guides. For this guide, a sample item and scoring guide have been created for each of the science tests.

Reading Rubric Page 92

Writing Rubrics Page 93

Mathematics Rubric Page 94

Science and Biology Sample Scoring Guides Page 95

Rubric for DC CAS Constructed-Response Items: Reading

Score	Description
3	The response demonstrates a complete understanding of the passage as it relates to the question. The response includes support that <ul style="list-style-type: none"> • is clear and complete • provides relevant and specific details/information from the text
2	The response demonstrates a partial understanding of the passage as it relates to the question. The response includes support that <ul style="list-style-type: none"> • is partially clear and/or partially complete • provides mostly relevant but somewhat general and/or inaccurate details/information from the text
1	The response demonstrates a minimal understanding of the passage as it relates to the question. The response includes support that <ul style="list-style-type: none"> • is minimally correct or incomplete • provides inadequate, incorrect, or no relevant details/information from the text
0	The response demonstrates no understanding of the passage as it relates to the question. Any details/information that is included is incorrect or irrelevant.

Student responses that are awarded a score of 3 have

- fully answered all parts of the question posed
- demonstrated the student’s understanding of the whole text relative to the question
- offered appropriate, clear, and full textual support for the answer
- explained direct quotations from the text that are used as support
- included inferences, when appropriate, based on the text

Rubrics for DC CAS Constructed-Response Item: Writing

Topic/Idea Development

<i>Score</i>	<i>Description</i>
6	<ul style="list-style-type: none"> Rich topic/idea development Careful and/or subtle organization Effective/rich use of language
5	<ul style="list-style-type: none"> Full topic/idea development Logical organization Strong details Appropriate use of language
4	<ul style="list-style-type: none"> Moderate topic/idea development and organization Adequate, relevant details Some variety in language
3	<ul style="list-style-type: none"> Rudimentary topic/idea development and/or organization Basic supporting ideas Simplistic language
2	<ul style="list-style-type: none"> Limited or weak topic/idea development, organization, and/or details Limited awareness of audience and/or task
1	<ul style="list-style-type: none"> Limited topic/idea development, organization, and/or details Little or no awareness of audience and/or task

Standard English Conventions

<i>Score</i>	<i>Description</i>
4	<ul style="list-style-type: none"> Control of sentence structure, grammar and usage, and mechanics (length and complexity of essay provide opportunity for student to show control of standard English conventions)
3	<ul style="list-style-type: none"> Errors do not interfere with communication and/or Few errors relative to length of essay or complexity of sentence structure, grammar and usage, and mechanics
2	<ul style="list-style-type: none"> Errors interfere somewhat with communication and/or Too many errors relative to length of the essay or complexity of sentence structure, grammar and usage, and mechanics
1	<ul style="list-style-type: none"> Errors seriously interfere with communication AND Little control of sentence structure, grammar and usage, and mechanics

Rubric for DC CAS Constructed-Response Items: Mathematics

Score	Description
3	<p>The response demonstrates a thorough understanding of the mathematical concepts and processes needed to complete the task.</p> <ul style="list-style-type: none"> • Response is correct and complete. • Response shows application of a reasonable and relevant strategy. • Mathematical ideas are expressed coherently through clear, complete, logical, and fully developed responses using words, calculations, and/or symbols as appropriate.
2	<p>The response demonstrates a general and/or partial understanding of the mathematical concepts and processes needed to complete the task.</p> <ul style="list-style-type: none"> • Response is mostly correct, and may be only partially complete. • Response shows application of a reasonable and relevant strategy, even though only partially applied. • Mathematical ideas are expressed generally or partially using words, calculations, and/or symbols as appropriate.
1	<p>The response demonstrates a minimal and/or limited understanding of the mathematical concepts and processes needed to complete the task.</p> <ul style="list-style-type: none"> • Response is only minimally correct or incomplete. • Application of a strategy is indicated or implied, but the strategy may reflect a misunderstanding of mathematical concepts and/or procedures. • Mathematical ideas are expressed in a limited manner and are flawed. Words, calculations, and/or symbols are attempted to be used appropriately but may be missing.
0	<p>The response demonstrates no understanding of the mathematical concepts and processes needed to complete the task.</p> <ul style="list-style-type: none"> • Response is incorrect, incomplete, or missing. • Response shows no application of a strategy or application of an irrelevant strategy. • Mathematical ideas cannot be interpreted or lack sufficient evidence to support even a limited understanding.

Student responses that are awarded a score of 3 have

- fully answered all parts of the question
- offered appropriate, clear, and full work to support their answer, as needed

Grade 5 Science: Sample Constructed-Response Item with Scoring Guide

A student placed several ice cubes into a plastic container. After sitting at room temperature for an hour, the ice melted into water.

- A** Describe the physical change that the ice went through. Write your answer on the lines in the answer booklet.
- B** What would need to happen to change the water back into ice? Write your answer on the lines in the answer booklet.

Item-Specific Rubric	Score Points	2
<p>Key Elements:</p> <p>_____</p> <p>The ice changed from solid to liquid.</p> <p>_____</p> <p>Any reasonable description of cooling the water until it freezes.</p> <p>_____</p>		
<p>Score Points:</p> <p>2 points Two key elements</p> <p>1 point One key element</p> <p>0 points Other</p>		

Sample Student Responses & Score Points Awarded

A The solid ice changed into a liquid.

B You could put it in the freezer until it turned back into ice.

Score: 2 points

A The ice changed into water.

B You would need to refreeze it.

Score: 1 point

Note: For Part A, no point awarded for a response of the ice changing into *water*, which is already stated in the item.

A The ice changed.

B You would need to undo it.

Score: 0 points

Note: No points awarded as the response to both parts are too vague.

Grade 8 Science: Sample Constructed-Response Item with Scoring Guide

A student has several objects made of different materials. The student wants to find the density of each object in order to predict which objects will float when placed into water.

- A** Which two properties should the student measure in order to find the density of each object? Write your answer on the line in the answer booklet.
- B** Explain how the student could use the density of each object to predict which objects will float when placed into water. Write your answer on the line in the answer booklet.

Item-Specific Rubric	Score Points	2
Key Elements:		

Mass AND volume		

Any reasonable explanation of comparing the density of each object to the density of water to see which objects have a lower density than water (1.0 g/mL).		

Score Points:		
2 points	Two key elements	
1 point	One key element	
0 points	Other	

Sample Student Responses & Score Points Awarded

A Mass and volume

B You could see if an object's density was less than the density of water, then it would float.

Score: 2 points

Note: For Part B, students may state the 'density of water' or give the value of 1.0 g/mL.

A Mass

B If the object's density was less than water's, then it would float.

Score: 1 point

Note: No point awarded for just one property named in Part A.

A Weight and space

B A large density means the object won't float.

Score: 0 points

Note: No point awarded for Part A as the properties are incorrect, and no point awarded for Part B as there is no comparison to the density of water and/or the reasoning is incorrect.

Biology: Sample Constructed-Response Item with Scoring Guide

Many different substances can enter and exit a cell by passing through the cell membrane.

A Name the process by which oxygen molecules would enter through the cell membrane, and identify whether this process would require energy to occur. Write your answers in the chart provided in the answer booklet.

B Name the process by which sodium ions would exit through the cell membrane, and identify whether this process would require energy to occur. Write your answers in the chart provided in the answer booklet.

Item-Specific Rubric	Score Points	2
----------------------	--------------	---

Key Elements:

Diffusion **AND** No (no energy required)

Active transport **AND** Yes (energy required)

Score Points:

2 points Two key elements

1 point One key element

0 points Other

Sample Student Responses & Score Points Awarded

	Process	Energy Required?
A	Diffusion	no
B	Active Transport	yes

Score: 2 points

	Process	Energy Required?
A	Diffusion	yes
B	Active Transport	yes

Score: 1 point

Note: Both parts must be correct for a student to earn a point for the specific process.

	Process	Energy Required?
A	Easy	no
B	Pumping	yes

Score: 0 points

Note: Neither process was named correctly, so the student did not earn a point for either process.

Additional Resource Information and Glossary

In this section of the *DC CAS Resource Guide* is a list of additional resources identified by educators of the District of Columbia. These resources have been used in classrooms because of their curricular and assessment alignment to DC standards.

Also included in this section is a glossary of assessment terms.

Glossary

constructed response (CR)

a test item for which a student must write a response, usually to provide and then support an answer to a question OR to provide an answer and then show or explain a process for determining the answer

content standard

the skill and knowledge expected of students at a specific grade level

Performance-Level Descriptors (PLDs)

PLDs provide descriptions of students' performance at each achievement level. The PLDs for the DC CAS are included in the *Guide to Test Interpretation* distributed to schools.

rubric

a framework of criteria that defines how a student response, usually to a constructed-response item, will be evaluated and scored; a holistic, or generic, rubric gives criteria that are general in nature and can be used to score items of similar construct and content (e.g., reading comprehension items).

scoring guide

a guide that may include notes or sample responses that are specific to a constructed-response item; scoring guides are developed to help scorers as they apply scoring criteria to student responses.

selected response (SR)

a test item, also known as a multiple-choice item, in which a student is presented answer choices from which to select the correct response to a posed question or problem

strand

a cluster of standards within a content area that are often used as a reporting category, such as Informational Text or Number Sense and Operations
