DRAFT

INTRODUCTION

OSSE Vision

All District residents receive an excellent education.

OSSE Division of Specialized Education Mission

The Division of Specialized Education's mission is to ensure that all District of Columbia children and youth with developmental delays and disabilities can access high quality services and a free appropriate public education. The Division is committed to excellence, joint accountability, reflective practice, and continuous improvement.

The District of Columbia Secondary Transition Process Toolkit is designed to assist educators in effectively addressing the transition planning needs of students with disabilities who are preparing to make the move from high school to postsecondary employment, education/training, and independent living. This guide was developed using Federal and District of Columbia policies, procedures, and regulations.

While this guide is intended to assist educators to understand and apply best practices in secondary transition planning, this guide is not meant to:

- Be a complete explanation of all special education laws and regulations;
- Give legal advice; or,
- Supersede any local and/or Federal law.

We hope you find this toolkit useful and welcome your feedback.

TRANSITION FRAMEWORKS & BEST PRACTICES

I. Introduction: What is secondary transition and why does it matter?

One of life’s most significant transitions occurs when a student prepares to leave high school and enter the world as a young adult.¹ This experience can be a rocky and emotional time for all families—especially for the families of youth with disabilities.

Too often, transition is thought of as a one-time event that happens on the day a student walks across the stage to receive his diploma or certificate. This perception is misguided and can lead to confusion and a lack of adequate preparation for transition as the student moves on to his or her life after high school.

Although youth with disabilities may need to address unique circumstances during the transition from school to young adulthood, careful planning by educators and supporting agencies can provide experiences, skills and knowledge to ensure student success. The challenge in effective transition planning is to enable all students to achieve high academic standards, gain the necessary skills to achieve their desired post-school goals (including post-secondary education, training, or employment), and assume adult responsibilities in their communities. Additionally, educators must work to keep all students in school and engaged in meaningful educational experiences so they will be prepared for post-secondary education, employment, and independent living.

To be effective, transition planning must be a systematic and structured process in which entities collaborate to provide a continuum of services that address the individual strengths, needs, and interests of students. Program development, evaluation for improvement, and ongoing professional development are key components of this systematic approach.

When students receive quality transition planning and services, the likelihood that they will graduate and experience positive post-school outcomes greatly increases. This resource is designed to assist parents, students, educators, and community service providers in helping students identify, prepare for, and achieve their postsecondary goals.

Transition as a Concept

The concept of transition generally has three major components:

- Coach every student and family to think about goals for life after high school and to develop a long-range plan to achieve these goals.
- Design the high school experience to ensure that students gain the skills and competencies needed to achieve their desired post-school goals.
- Identify and link students and families to post-school services, supports and programs before the student exits the school system.

(O’Leary, Storms & Williams, 2000)

¹ From Storms, J., O’Leary, E., & Williams, J. (2000). *Transition Requirements: A Guide for States, Districts, Schools, Universities, and Families*, available at <http://www.ncset.org/publications/related/idea97.pdf> and OSSE Transition Training Module, “Best Practices in Transition” available at <https://sites.google.com/site/ossetransition/modules>.

TRANSITION FRAMEWORKS & BEST PRACTICES

II. Predicting Post-School Success

In order to provide quality transition services to youth with disabilities, educators must be familiar with evidence-based best practices and understand how to implement these practices with fidelity. Fortunately, there are multiple resources that point educators toward the “predictors of post school success”—skills and experiences that increase the likelihood of youth postsecondary goal attainment. For example, research indicates:

- Students with higher daily living skills (based on teacher and student ratings from the Life Centered Career Education rating scales) were more likely to have a higher quality of life (independent living) and be engaged in post-school employment;²
- Students who participated in community-based training, which involved instruction in non-school, natural environments focused on development of social skills, accessing public transportation, and on-the-job training, were more likely to be engaged in post-school employment;³ and,
- Students who took academic courses in regular education placements were more likely to be engaged in post-school education, employment, and independent living.⁴

Educators and other transition service providers who gain an understanding of effective practices and incorporate them into every aspect of transition planning will achieve greater results in assisting youth with disabilities in reaching their postsecondary goals.

For a more extensive compilation of evidence-based practices in transition, refer to the Division on Career Development and Transition’s resource page at <http://www.dcdt.org>.

III. Frameworks to Guide Transition Planning

In addition to providing individualized and evidence-based transition services to each student, schools must ensure that there are established systems, policies, and procedures that support the successful movement to post-school life at every level. Kohler’s Taxonomy for Transition Planning and the National Collaborative on Workforce and Disability for Youth’s Guideposts for Success provide two evidence-based frameworks that assist practitioners in assessing their practices and provide guidance on best practices within each area of transition programming.

TRANSITION FRAMEWORKS & BEST PRACTICES

A. Kohler's Taxonomy for Transition Planning⁵

Kohler's Taxonomy for Transition Planning is an applied framework of secondary education and transition practices that is associated with improving students' post-school outcomes. Within the Taxonomy, transition program philosophy includes the following components:

- Community-referenced and outcome-based curricula
- Education provided in integrated settings and the least restrictive environment
- Student has access to all educational options (secondary and post-secondary)
- Cultural and ethnic sensitivity in programs and planning
- Flexible programming to meet student needs
- Program planning is outcome-based
- Longitudinal approach to transition (early childhood to adult)

Together these components provide the framework for culturally-responsive, effective transition planning and services that meet the needs of each individual student.

Practices that define the taxonomy are organized into five categories that are relevant for organizing schools and instruction to facilitate transition: student-focused planning, student development, interagency and interdisciplinary collaboration, family involvement, and program structures. Each category features a number of primary elements that describe specific secondary education and transition practices. When implemented, these practices translate into activities and conditions that ensure successful outcomes.

⁵ Adapted from the National Secondary Transition Technical Assistance Center, *Cross-Referencing the Taxonomy for Transition Programming with NASET National Standards & Quality Indicators and Guideposts for Success for Transition-Age Youth*, available at http://www.nsttac.org/sites/default/files/assets/pdf/pdf/capacity_building/CrosswalkTaxonomy.pdf.

TRANSITION FRAMEWORKS & BEST PRACTICES

Student-Focused Planning

- Student-focused planning practices focus on using assessment information and facilitating students' self-determination to develop individual education programs based on students' post-school goals.

Student Development

- Student development practices emphasize life, employment, and occupational skill development through school-based and work-based learning experiences. Student assessment and accommodations provide a fundamental basis for student development that result in successful transition.

Interagency Collaboration

- Interagency collaboration practices facilitate involvement of community businesses, organizations, and agencies in all aspects of transition-focused education. Interagency agreements that clearly articulate roles, responsibilities, communication strategies, and other collaborative actions that enhance curriculum and program development foster collaboration.

Family Involvement

- Family involvement practices are associated with parent and family involvement in planning and delivering education and transition services. Family-focused training and family empowerment activities increase the ability of family members to work effectively with educators and other service providers.

Program Structure

- Program structures and attributes are features that relate to efficient and effective delivery of transition-focused education and services, including philosophy, planning, policy, evaluation, and human resource development. The structures and attribute of a school provide the framework for a transition perspective.

For more information and resources on how to utilize Kohler's Taxonomy for Transition Planning in planning and service provision visit www.nsttac.org.

B. Guideposts for Success⁶

Based on extensive research on effective transition practices, the National Collaborative on Workforce & Disability for Youth (NCWD/Youth) developed the Guideposts for Success that indicate experiences, skills, supports that all youth will need to transition to adulthood successfully. The Guideposts provide a statement of principles, a direction that will lead to better outcomes for all young people, and a way to organize policy and practice.

The Guideposts are based on the important following assumptions:

⁶ Information adapted from the *National Collaborative on Workforce and Disability for Youth Guideposts for Success*, Second Edition, available at www.ncwd-youth.info.

TRANSITION FRAMEWORKS & BEST PRACTICES

1. High expectations for all youth, including youth with disabilities;
2. Equality of opportunity for everyone, including nondiscrimination, individualization, inclusion, and integration;
3. Full participation through self-determination, informed choice, and participation in decision-making;
4. Independent living, including skills development and long-term supports and services;
5. Competitive employment and economic self-sufficiency, which may include supports; and,
6. Individualized, person-driven, and culturally and linguistically appropriate transition planning.

Who Should Use Them and How?

Youth and families should look for programs and activities that provide these features. Youth should use the Guideposts in developing any individualized plans, such as Individualized Education Programs (IEPs), Individualized Plans for Employment (IPE), and service strategies as required by the Workforce Investment Act.

Administrators and policy makers at the local level should use the Guideposts in making decisions regarding funding, in setting and establishing local priorities related to transitioning youth, and in evaluating the work of agencies supported by that funding.

Youth service practitioners (i.e., educators, related service providers, case managers, etc.) should use the Guideposts and tools that NCWD/Youth has developed to implement them in their work.

TRANSITION FRAMEWORKS & BEST PRACTICES

Guidepost 1: School-Based Preparatory Experiences

In order to perform at optimal levels in all education settings, all youth need to participate in educational programs grounded in standards, clear performance expectations, and graduation exit options based upon meaningful, accurate, and relevant indicators of student learning and skills. These should include the following:

- academic programs that are based on clear state standards;
- career and technical education programs that are based on professional and industry standards;
- curricular and program options based on universal design of school, work, and community-based learning experiences;
- learning environments that are small and safe, including extra supports such as tutoring, as necessary;
- supports from and by highly qualified staff;
- access to an assessment system that includes multiple measures; and
- graduation standards that include options.

In addition, youth with disabilities need to do the following:

- use their individual transition plans to drive their personal instruction, and use strategies to continue the transition process post-schooling;
- have access to specific and individual learning accommodations while they are in school;
- develop knowledge of reasonable accommodations that they can request and control in educational settings, including assessment accommodations; and
- be supported by highly qualified transitional support staff that may or may not be school staff.

Guidepost 2: Career Preparation and Work-Based Learning Experiences

Career preparation and work-based learning experiences are essential in order for youth to form and develop aspirations and to make informed choices about careers. These experiences can be provided during the school day or through after-school programs, and will require collaborations with other organizations.

All youth need information on career options, including the following:

- career assessments to help identify students' school and post-school preferences and interests;
- structured exposure to postsecondary education and other life-long learning opportunities;

TRANSITION FRAMEWORKS & BEST PRACTICES

- exposure to career opportunities that ultimately lead to a living wage, including information about educational requirements, entry requirements, income and benefits potential, and asset accumulation; and
- training designed to improve job-seeking skills and work-place basic skills (sometimes called “soft skills”).

In order to identify and attain career goals, youth need to be exposed to a range of experiences, including the following:

- opportunities to engage in a range of work-based exploration activities such as site visits and job shadowing;
- multiple on-the-job training experiences (paid or unpaid), including community service, that are specifically linked to the content of a program of study and school credit;
- opportunities to learn and practice their work skills (so-called “soft skills”); and,
- opportunities to learn first-hand about specific occupational skills related to a career pathway.

In addition, youth with disabilities need to do one or more of the following:

- understand the relationships between benefits planning and career choices;
- learn to communicate their disability related work support and accommodation needs; and,
- learn to find, formally request, and secure appropriate supports and reasonable accommodations in education, training, and employment settings.

Guidepost 3: Youth Development and Leadership

Youth Development is a process that prepares young people to meet the challenges of adolescence and adulthood through a coordinated, progressive series of activities and experiences which help them gain skills and competencies. Youth leadership is part of that process. In order to control and direct their own lives based on informed decisions, all youth need the following:

- mentoring activities designed to establish strong relationships with adults through formal and informal settings;
- peer-to-peer mentoring opportunities;
- exposure to role models in a variety of contexts;
- training in skills such as self-advocacy and conflict resolution;
- exposure to personal leadership and youth development activities, including community service; and,
- opportunities that allow youth to exercise leadership and build self-esteem.

TRANSITION FRAMEWORKS & BEST PRACTICES

Youth with disabilities also need the following:

- mentors and role models including persons with and without disabilities; and
- an understanding of disability history, culture, and disability public policy issues as well as their rights and responsibilities.

Guidepost 4: Connecting Activities

Young people need to be connected to programs, services, activities, and supports that help them gain access to chosen post-school options. All youth may need one or more of the following:

- mental and physical health services;
- transportation;
- housing;
- tutoring;
- financial planning and management;
- post-program supports through structured arrangements in postsecondary institutions and adult service agencies; and
- connection to other services and opportunities (e.g. recreation).

Youth with disabilities may need one or more of the following:

- acquisition of appropriate assistive technologies;
- community orientation and mobility/travel training (e.g. accessible transportation, bus routes, housing, health clinics);
- exposure to post-program supports such as independent living centers and other consumer-driven community-based support service agencies;
- personal assistance services, including attendants, readers, interpreters, or other such services; and,
- benefits-planning counseling, including information regarding the myriad of benefits available and their interrelationships so that youth may maximize those benefits in transitioning from public assistance to self-sufficiency.

Guidepost 5: Family Involvement and Supports

Participation and involvement of parents, family members, and/or other caring adults promotes the social, emotional, physical, academic and occupational growth of youth, leading to better post-school outcomes. All youth need parents, families, and other caring adults who do the following:

TRANSITION FRAMEWORKS & BEST PRACTICES

- have high expectations that build upon the young person’s strengths, interests, and needs and that foster each youth’s ability to achieve independence and self-sufficiency;
- remain involved in their lives and assist them toward adulthood;
- have access to information about employment, further education, and community resources;
- take an active role in transition planning with schools and community partners; and,
- have access to medical, professional, and peer support networks.

In addition, youth with disabilities need parents, families, and other caring adults who have the following:

- an understanding of the youth’s disability and how it may affect his or her education, employment, and daily living options;
- knowledge of rights and responsibilities under various disability-related legislation;
- knowledge of and access to programs, services, supports, and accommodations available for young people with disabilities; and,
- an understanding of how individualized planning tools can assist youth in achieving transition goals and objectives.

For more information and resources on how to incorporate the Guideposts for Success, visit <http://www.ncwd-youth.info/guideposts>.

FAQS ABOUT SECONDARY TRANSITION

Fact Sheet

1. Why is planning for secondary transition important?

Presently, a large number of students receiving special education services do not graduate with diplomas or certificates or pursue education or training beyond high school. In comparison to the general population, students with disabilities struggle to succeed in the workplace and are less likely to live independently in the community.

Secondary transition planning is aimed at increasing every student's chance to succeed by bringing families, local education agencies (LEAs), and other service providers together to create a blueprint for post-graduation that is based on an individual student's strengths, needs, and goals.

2. For whom is transition planning required?

According to the Individuals with Disabilities Education Act (IDEA 2004) and the D.C. Municipal Regulations (DCMR), transition planning is required for all students with disabilities who qualify for special education services and are over the age of 16.

3. When does planning for secondary transition start?

The law requires IEP teams to address transition planning for IEPs that take effect during the school year in which a student turns 16 years of age. However, it is recommended that IEP teams begin transition planning at an earlier age—conversations about a student's goals for postsecondary education, employment, and independent living and informal transition planning should begin during the elementary school years. Nationwide, many states require transition planning for students beginning at age 14.

4. Who is involved in the transition planning process?

The transition planning process is driven by transition teams who work together to assist students in achieving their post-high school goals. Team members may include:

- The student
- Family members
- Special and general education teacher(s)
- Career/tech center personnel
- Transition coordinator
- Guidance counselor
- Agency/community representatives

5. What does a student need for effective transition programming?

Effective transition planning begins with a comprehensive assessment of the student. Assessment data forms the basis for defining the goals and services that should be included in the IEP. Assessments can be formal or informal and should be completed before the IEP meeting. Transition related assessment and student progress information should be recorded in the Present Levels of Academic Achievement and Functional

FAQS ABOUT SECONDARY TRANSITION

Fact Sheet

Performance (PLAAFP) section and the transition planning section in a student's IEP.

6. How is a transition plan written?

Prior to the IEP meeting, the team must go through an information gathering process. In addition to gathering relevant assessment data relating to the student's functional strengths and needs, the team seeks input from the student, the student's family, education providers, and relevant outside agency and community members.

At the IEP meeting, the IEP team will review the student's present educational levels. Next, the team will discuss the student's postsecondary goals in the areas of education, employment, and independent living. Based on this information, the team will work together to develop a transition plan. Additionally, the team will write measurable annual IEP goals to address the student's needs and complete the remaining sections of the IEP based on the student's postsecondary goals.

7. Why is the participation of outside agencies in the secondary transition process important?

Collaboration with outside agencies helps IEP teams become familiar with the range/extent of services offered. Outside agency participation also allows parents and students to meet service providers and form personal connections.

8. I'm new to this process. What resources are available to help me get up to speed?

On the national level, the Office of Special Education Programs (OSEP) funds three centers to provide technical assistance in secondary transition-related areas.

- The National Secondary Transition Technical Assistance Center (NSTTAC): www.nsttac.org
- The National Dropout Prevention Center for Students with Disabilities (NDPC-SD): www.dropoutprevention.org
- The National Post-School Outcomes Center (NPSO): www.psocenter.org

Additionally, several local websites provide helpful information to assist educators in familiarizing themselves with District of Columbia transition resources and contacts.

- Office of the State Superintendent of Education Secondary Transition: www.ossesecondarytransition.org
- DC Partners in Transition: www.dctransition.org

For more information on resources and community organizations that specialize in providing assistance with the transition process refer to the Appendix at the back of this toolkit.

Secondary Transition Legal Background

DRAFT

TRANSITION LEGAL REQUIREMENTS

I. Secondary Transition and the IDEA: A Legal Background⁷

While transition planning was not mandated within the Individuals with Disabilities Education Act (IDEA) until 1990, the philosophy of preparing students for life after high school has always been a primary purpose of education. Historically, the focus has been on preparing students with disabilities for the workforce, but as the labor market in the United States has shifted to require a highly trained workforce, the focus of schools has also shifted to preparing youth with disabilities for postsecondary education and independent living.

IDEA 2004 provides further clarification of this philosophy: “Disability is a natural part of the human experiences and in no way diminishes the right of individuals to participate in or contribute to society. Improving educational results for children with disabilities is an essential element of our national policy of ensuring equality of opportunity, full participation, independent living, and economic self-sufficiency for individuals with disabilities.”⁸ ((c)(1)).

Through sustained advocacy efforts, the right to a free and appropriate public education was afforded to children with disabilities in 1975 through the Education for All Handicapped Children Act, also known as Public Law 94-142 (the predecessor of the IDEA). In addition, Section 504 of the Rehabilitation Act of 1973 implemented nondiscrimination policies within public education, as well as programs and activities that received federal financial assistance (e.g., postsecondary college and training programs). Together, these two laws ensured that accommodations and services were (and continue to be) provided to youth with disabilities. Expanding on these laws, the Americans with Disabilities Act (ADA), passed in 1990, prohibited discrimination and required reasonable accommodations by both public and private entities. It is vital that educators know the rights and responsibilities outlined in these laws and support students to advocate for their rights within school and beyond.

The secondary transition requirements in the IDEA 2004 challenge educators to improve the post-school results of students with disabilities by improving the method through which they plan and prepare students and families for the challenges of transitioning into the adult world.

The Individualized Education Program (IEP) is the legal document that ensures schools provide a free appropriate public education (FAPE) in the Least Restrictive Environment (LRE) that is designed to meet the unique needs of each student with a qualifying disability.

The transition requirements in IDEA, District of Columbia Municipal Regulations (DCMR), and OSSE Secondary Transition Policy are designed to ensure that school staff:

- Work with eligible students and their families to think about what students want to do after high school;
- Design a rigorous course of specialized instruction and services that directly relates to each student’s dreams and goals for the future;
- Provide instruction, related services, community experiences, employment and adult and daily living objectives that ensure adequate preparation while the student is in high school;
- Assist students and families in making the linkages to services they will need after high

⁷ From Storms, J., O’Leary, E., & Williams, J. (2000). *Transition Requirements: A Guide for States, Districts, Schools, Universities, and Families*. Retrieved 8/9/12 from <http://www.ncset.org/publications/related/idea97.pdf>

⁸ 20 USC §1400(c)(1).

TRANSITION LEGAL REQUIREMENTS

school, and

- Increase the probability that every student will be successful once he or she exits high school.

A. Transition Services⁹

The focus of the IDEA’s transition mandate centers on providing the transition services students will need to successfully accomplish their postsecondary goals. The IDEA defines “transition services” as a results-oriented process that involves a coordinated set of activities for a child with a disability.

Transition activities should be focused on improving a student’s academic and functional achievement and facilitating the young person’s movement from school to post-school activities, including postsecondary education, vocational education, integrated employment (including supported employment), continuing and adult education, adult services, independent living, and community participation.

Additionally, transition services should be based on an individual student’s needs, taking into account his/her strengths, preferences, and interests. Transition services may include the following activities:

- Instruction
- Related services
- Community experiences
- Development of employment and other post-school adult living objectives
- Acquisition of daily living skills and functional vocational evaluation (when appropriate)

B. Student Participation in IEP Transition Planning¹⁰

IEP teams must invite the student to attend in the IEP meeting whenever a purpose of the meeting is to consider postsecondary goals and the transition services needed to assist the student in reaching those goals. By law, IEP teams are required to engage the student in the transition planning process when creating the IEP that will take effect during the year in which the student will turn 16. However, best practice demonstrates that schools who initiate student involvement and transition planning at earlier ages experience more successful transition outcomes.

IEP teams should prepare the student beforehand and facilitate the student’s meaningful participation during the IEP meeting. If the student does not attend, the IEP Team should take other steps to ensure the student’s preferences and interests are considered throughout the transition planning process. For more information on best practices for preparing students to meaningfully participate in transition planning and IEP meeting participation, refer to the *Student-Focused Planning* section in this Toolkit.

C. Transition Assessment¹¹

⁹ 34 CFR §300.43(a).

¹⁰ 34 CFR §300.321(b), DCMR §3003.4, and OSSE Secondary Transition Policy.

TRANSITION LEGAL REQUIREMENTS

The purpose of transition assessment is to provide information for IEP teams to use in developing and writing practical, achievable, and measurable post-school goals and to identify the transition services necessary to help a student reach those goals. At a minimum, IEP teams should administer transition assessments in the areas of education and training, employment, and independent living. When properly conducted, information gathered from transition assessments should provide answers to the following questions:

- What the student would like to do beyond secondary school (e.g., further education or training, employment, military, continuing or adult education);
- Where the student would like to live (e.g., dorm, apartment, family home, group home, supported or independent living);
- How the student would like to take part in his/her community (e.g., transportation, recreation, community activities, etc.).

Transition assessments consist of a variety of formats and include:

- Behavioral assessments
- Aptitude tests
- Interest and work values inventories
- Personalities or preference tests
- Career maturity or readiness tests
- Self-determination assessments
- Work-related temperament scales
- Vocational assessment
- Transition planning inventories

IEP teams are legally required to begin the transition planning process with transition assessment **before** a student turns 16 and **before** any postsecondary goals or services have been selected; this is based on the idea that age-appropriate transition assessment data provides the foundation for developing individualized goals and services that are based on a student's strengths, preferences, and interests.

Following initial transition planning, IEP teams should remember that transition assessment is an **ongoing process**. Until a student with an IEP exits the school system, IEP teams should continue to collect data that adequately captures the student's academic progress, communication abilities, needs, preferences, and interests to ensure a student's transition plan continues to accurately reflect his/her goals for postsecondary life and provides transition services that are aligned with supporting the student in achieving these goals.

For more information on how assessment guides the transition planning process, refer to the

¹¹ Legal requirements on transition assessment can be found in 34 CFR §300.320(b), DCMR §3009.4, and the OSSE Secondary Transition Policy.

TRANSITION LEGAL REQUIREMENTS

Age-Appropriate Transition Assessment section in this Toolkit.

D. Transition Goals¹²

A student's IEP must contain appropriate measurable postsecondary goals beginning with the IEP that is in effect during the time a student reaches the age of 16. The IEP should contain postsecondary goals in the areas of education, training, employment after high school, and independent living¹³ (if appropriate) and should be based on age-appropriate transition assessments. Goals should be updated annually to reflect current transition assessment data and the student's changing interests, preferences, and strengths.

For more information on transition goal development, refer to the *Postsecondary Long Range Transition Goals* and *Annual Short-Term Measurable Goals* sections in this toolkit.

E. Course of Study¹⁴

A course of study is the description of the coursework necessary to prepare a student for postsecondary activities and goal achievement.¹⁵ During the **eighth grade**, the IEP team should work together to determine the student's course of study and graduation plan.¹⁶ Moving forward, a student's course of study should be reviewed annually (and modified if necessary) to reflect the student's changing needs, interests, and performance.

Schools must provide all students with disabilities, including students with significant disabilities, the opportunity to earn a high school diploma. If an IEP Team determines a high school diploma is not appropriate, the Team should develop a course of study that will assist the student in achieving an alternative to a high school diploma. Note that IEP Teams are required to create a transition plan and graduation plan regardless of whether a student is on a non-diploma or diploma track.

The following procedures apply whenever an IEP team determines to place a student on a non-diploma course of study:

- The school must provide the parents with written notification that the IEP team has determined that the student will be placed on a non-diploma course of study
- The school must provide information in understandable language to the student and his parents about the differences between a diploma and a non-diploma course of study
- The LEA must obtain the parent's written acknowledgement that the parents have been informed and understand that the student will be placed on a non-diploma course of study

¹²

¹³ The OSSE Secondary Transition Policy states, "It is up to the student's IEP team to determine whether IEP goals related to the development of independent living skills are appropriate and necessary for the student to receive FAPE." In either instance, IEP teams should rely upon documented transition assessment data in the area of independent living to support this determination.

¹⁴ OSSE Secondary Transition Policy.

¹⁵ 20 USC §1416(a)(3)(B).

¹⁶ DCMR §2203.1.

TRANSITION LEGAL REQUIREMENTS

Additionally, the student's IEP must contain a statement on why a standard diploma is not appropriate and that the parents and student have been fully informed of this decision.

F. Involving Other Agencies in Transition Planning¹⁷

To the extent appropriate, IEP Teams should invite a representative from the District of Columbia Rehabilitative Services Administration (DC RSA) and any other public agency that is likely to be responsible for providing or paying for transition and/or adult services.¹⁸

Prior to inviting outside agencies to participate, the parent or adult student must provide consent for the IEP team to invite the agency. To ensure the protection of confidentiality, parental consent (or consent by an adult student) must also be given before IEP teams release any personally identifiable information, data, or records that have been collected or maintained by the school to officials from participating agencies.

Although the IEP team has the responsibility to invite individuals from other agencies to participate in transition planning, the team does not have the authority to require representatives from other agencies to attend IEP meetings.¹⁹ If an invited representative of a participating agency does not attend the meeting, the IEP team should take other steps to obtain the involvement of the agency during the transition planning process.²⁰

If a participating agency (i.e., any agency other than the school) fails to provide the transition services described in the IEP, the IEP team must reconvene to identify alternative strategies for meeting the student's transition goals and to amend the IEP accordingly.

G. Transfer of Rights at Age of Majority²¹

When a student reaches the age of 17 (except for a student who has been determined to be incompetent under District of Columbia law), the IEP Team must provide notice to both the student and the student's parents that the rights under Part B of the IDEA will transfer to the student upon the student reaching age 18. Additionally, the student's IEP should include a statement indicating that both the parent and student have been informed about the impending transfer.

Once a student reaches age 18, the IEP Team must provide notice of the transfer of rights as part of the procedural safeguards provided to the student and the student's parents. The notice the IEP Team provides must also indicate that rights in regards to requesting educational records were also transferred at that time.

¹⁷ 34 CFR §300.321(b)(3) and OSSE Secondary Transition Policy.

¹⁸ For example, other service agencies an IEP Team might consider inviting include the Developmental Disabilities Administration (DDA), the DC Department of Mental Health (DMH), or the DC Center for Independent Living.

¹⁹ 34 CFR §300.324(c) and OSSE Secondary Transition Policy.

²⁰ DCMR §3003.4.

²¹ 34 CFR §300.320(c), 34 CFR §300.520, DCMR §3009.7, and OSSE Secondary Transition Policy.

TRANSITION LEGAL REQUIREMENTS

H. Prior Written Notice²²

Prior to the time when a student completes the last semester of secondary school in which he/she is expected to graduate with a diploma or certificate of completion, the school must provide a Prior Written Notice (PWN) that services will be discontinued at the end of the school year to the adult student (if educational decision making rights transferred to the student at age 18) or the parent (if the student is under age 18 or the parent holds educational decision making rights in the adult student's behalf through guardianship, power of attorney, or some other means). The PWN must clearly state that upon the semester's completion, the student will no longer be entitled to receive special education services from the school.

LEAs should further remember that students who receive a certificate of completion prior to their 22nd birthday remain eligible for and are entitled to special education services until the end of the semester during which they reach age 22.

I. Summary of Performance²³

IEP Teams are required to develop a Summary of Performance (SOP) for a student at least 60 days before end of the semester in which the student will graduate or exceed the age eligibility (age 22) for a special education services under the IDEA.

An SOP is most useful when the student (and parent, if appropriate) has had the opportunity to actively participate in developing the SOP. The SOP must include a summary of a student's:

- Academic achievement,
- Cognitive performance,
- Functional performance, and
- Recommendations on how to assist the student in meeting his/her postsecondary goals.

Although the information found in the SOP can be useful in identifying reasonable accommodations and supports a student may need in postsecondary settings, please note that standing alone, an IEP and SOP do not provide sufficient documentation of a disability to establish eligibility with adult service agencies and other postsecondary institutions/service providers. IEP teams should provide the student and family with accompanying documentation of the student's disability such as a current (no less than three years old) psychological or neuropsychological report in addition to the SOP to aid the student in accessing additional disability-related support services upon graduation.

For more information, refer to the Summary of Performance section in this Toolkit.

²² Legal requirements on Prior Written Notice can be found in 34 CFR §300.102(a)(3)(iii) and the OSSE Secondary Transition Policy.

²³ Legal requirements on the Summary of Performance can be found in 34 CFR §300.305(e)(3) , and the OSSE Secondary Transition Policy.

TRANSITION LEGAL REQUIREMENTS

II. Federal Reporting: Introduction to the Transition Indicators²⁴

Under the IDEA 2004, the U.S. Department of Education, through the Office of Special Education Programs (OSEP), requires states to develop State Performance Plans (SPP) on 20 indicators that guide their implementation of the IDEA. States are required to report annual data on their progress in meeting these indicators through yearly Annual Performance Reports (APR). In order to measure whether provided special education services actually prepared students for further education, employment, and independent living, four of the 20 indicators measure aspects of transition, including: Indicator 1 (Graduation Rate), Indicator 2 (Drop Out Rate), Indicator 13 (Secondary Transition IEP), and Indicator 14 (Post School Outcomes).²⁵

A. Indicator 13: Secondary Transition IEP²⁶

Indicator 13 measures the percentage of youths aged 16 and older who have IEPs that include appropriate and measurable postsecondary goals. IEP postsecondary goals should be updated annually and based on a current transition assessment in order to satisfy this requirement. In conjunction, IEPs should include transition services and chart a course of study that will practically enable a student to meet his/her annual IEP goals, postsecondary goals, and transition service needs.²⁷

Indicator 13 also requires evidence that a student is invited to any IEP team meeting where transition services are discussed. When applicable, representatives of participating agencies should also be invited to the IEP team meeting, with the prior consent of a parent (or a student who has reached the age of majority).²⁸

B. Indicator 14: Post-School Outcomes²⁹

Though graduation rates for students with disabilities have improved over time, outcomes for students who exit the public education system are in need of improvement. Compared to their peers without disabilities, students with disabilities are less likely to participate in postsecondary education, face much higher adult unemployment rates, and are much more likely to become involved with the juvenile justice system or live in poverty as adults.

To assess the effectiveness of secondary education and transition services, Indicator 14 requires states to collect data on the postsecondary education and employment status of

²⁴ Information adapted from National Dissemination Center for Children with Disabilities (NICHCY), *Part B Indicators*, available at: <http://nichcy.org/laws/idea/partb/indicators-partb>.

²⁵ 34 CFR §300.601(a)

²⁶ According to the OSSE Secondary Transition Policy issued January 5, 2010 “Each LEA must certify and provide to the OSSE no later than July 31 of the current year, the total number of youth with IEPs aged 16 and above which had appropriate transition goals and services as outlined in this policy, DCMR, and IDEA.”

²⁷ 34 CFR §300.320(b)

²⁸ 34 CFR §300.321(b)

²⁹ National Post-School Outcomes Center (NPSO), *Measuring Transition Success: Focus on Youth & Family Participation*, July 2006. Retrieved from www.pacer.org.

TRANSITION LEGAL REQUIREMENTS

young adults who received special education while they were in high school.³⁰ Each state must annually report the percentage of youth who had IEPs and are no longer in secondary school that are competitively employed, enrolled in postsecondary school (or both) within one year of leaving high school.

In addition to meeting federal reporting requirements, there are many benefits from gathering and analyzing information on the post-school employment and education experiences of students who have recently exited special education. When analyzed in a thoughtful way, Indicator 14 data assists LEAs to:

- Focus educators, families, administrators, and students on preparing youth for postsecondary education and employment
- Identify services and experiences that contribute to better results and design more effective transition programs
- Identify areas in which teachers need support or additional training
- Determine the needs of specific schools and LEAs and strategically target resources
- Provide information that students and families can use to make informed decisions
- Develop state improvement plans that result in better post-school outcomes for youth with disabilities

³⁰ According to the OSSE Secondary Transition Policy issued January 5, 2010, “The OSSE is responsible for administering within one year of leaving high school a follow up survey for reach student who had an IEP and is no longer in secondary school. Each LEA is responsible for providing the OSSE accurate demographic data prior to the student graduation or exiting high school.”

TRANSITION LEGAL REQUIREMENTS

III. Legal Rights and Responsibilities in Postsecondary Education

Many high school students with disabilities plan to continue their education in postsecondary schools, including vocational and career schools, two- and four-year colleges, and universities. After a student leaves the school system, the educational entitlements of the IDEA are no longer in place. Accommodations are not provided automatically and must be requested. Section 504 of the Rehabilitation Act of 1973 and Title II of the Americans with Disabilities Act of 1990 prohibit discrimination on the basis of a disability and outline the obligations that postsecondary schools have to provide academic adjustments, auxiliary aids and services. Students with disabilities need to be informed about their own rights and responsibilities as well as the responsibilities that postsecondary institutions have toward them.

IDEA and ADA/Section 504 Comparison Chart³¹

	IDEA	ADA/Section 504
Identification	Schools must identify students with disabilities and provide services.	Students must self-disclose their disability condition and request services.
Disability Definition	Students ages 3-21 years that are determined, by a multidisciplinary team, to classify in one or more of 13 predetermined disability categories.	A physical or mental impairment that substantially limits one or more major life activities, has a record of such impairment, or is regarded as having such an impairment.
Legal Requirements	Provide a Free and Appropriate Education and any special and supportive services needed by the student.	Cannot discriminate on the basis of disability and provide reasonable accommodations to otherwise qualified students that ensure equal access to the university environment while not compromising essential components of curriculum.
Eligibility Determination	Schools identify students, provide psycho-educational testing, and determine needed services based on evaluation findings.	Students must contact the school for documentation guidelines and provide school with necessary documentation. New evaluations are the financial responsibility of the student unless special programs are available.
Specialized Plans	Schools must engage students in developing and following an Individualized Education Plan (IEP) that outlines how the student will make satisfactory progress.	Specialized plans are not developed. Accommodations are identified and communicated to faculty members. Students choose whether to utilize accommodations or not.
Parental Involvement	Schools are required to engage parents in the IEP process.	Under FERPA and HIPPA, parents are prohibited from accessing student information unless authorized by the student in writing.

³¹ Adapted from Dawson, Stephanie, *Americans with Disabilities Act of 1990/Section 504 of the Vocational Rehabilitation Act of 1973, and Individuals with Disabilities Act of 1990 Comparison Chart*, available at: http://www.ham.muohio.edu/disability_services/documents/IDEA-ADA-504ComparisonChart.pdf

ADA, SECTION 504 & POSTSECONDARY EDUCATION

Frequently Asked Questions Fact Sheet

Frequently Asked Questions about the ADA, Section 504 & Postsecondary Education³²

As students prepare for the transition from secondary school to postsecondary options, families often find they are less familiar with the protections offered by the Americans with Disabilities Act (ADA) and Section 504 of the Rehabilitation Act. Although protections exist, it is crucial for students to become knowledgeable about their rights and responsibilities in postsecondary settings because they have an ongoing responsibility to request and design their own accommodations.

How does the ADA and Section 504 affect admissions requirements?

Postsecondary programs cannot have eligibility requirements that screen out people with physical or mental disabilities. Application forms cannot ask applicants if they have a history of mental illness or other disability. Institutions may impose criteria that relate to safety risks but these criteria must be based on actual risk and not on stereotypes or assumptions. It is also illegal for an institution to serve students with disabilities differently because it believes insurance costs will be increased.

Does the student have to provide documentation of his or her disability to request accommodations?

Schools may request current documentation of a disability. If a student obviously uses a wheelchair or is blind or deaf, no further documentation may be necessary. However, for students with hidden disabilities (e.g., learning or psychiatric disabilities or chronic health impairment), it is reasonable and appropriate for a school to request documentation to establish the validity of the request for accommodations, and to help identify what accommodations are required.

What kind of documentation might be necessary?

Documentation should be completed and signed by a professional familiar with the student and the student's disability (i.e., a physician, psychologist, or rehabilitation counselor).

Documentation should verify the disability and suggest appropriate accommodations. If previous documentation exists, it is most likely sufficient unless it is not current (usually **no more than three years old**). If no current documentation is available, the student has the responsibility to obtain new documentation. This may mean paying to have the appropriate professional conduct a new evaluation. *It is recommended that students obtain an evaluation prior to leaving high school.*

³² Adapted from Leuchovious, D. *ADA Q&A...The ADA, Section 504 & Postsecondary Education*, Retrieved 8/10/2012 from <http://www.pacer.org/publications/adaqa/504.asp>.

ADA, SECTION 504 & POSTSECONDARY EDUCATION

Frequently Asked Questions Fact Sheet

What do postsecondary programs generally have to do for students with disabilities?

A school may not discriminate on the basis of disability. It must insure that the programs it offers, including extracurricular activities, are accessible to students with disabilities.

Postsecondary schools can do this in a number of ways: by providing architectural access, providing aids and services necessary for effective communication, and by modifying policies, practices, and procedures.

Are students with disabilities required to disclose their disability?

If a student does not require any accommodations, he can choose to keep this information private. However, if a student does need accommodations because of his disability, he must disclose in order to receive them. A school cannot provide any service, modification, or accommodation when it does not know one is required. It is a student's responsibility to make his needs known in advance. This process is often facilitated by an Office for Students with Disabilities. It is then the school's responsibility to work with the student to make reasonable modifications or provide appropriate services in a timely way.

For more information and tips on disclosure, refer to *The 411 on Disability Disclosure: A Workbook for Youth with Disabilities*, available at www.ncwd-youth.info.

What kinds of aids and services must postsecondary institutions provide to insure effective communication?

Qualified interpreters, assistive listening systems, captioning, TTYs (TeleTypewriters), qualified readers, audio recordings, taped texts, Braille materials, large print materials, materials on computer disk, and adapted computer terminals are examples of auxiliary aids and services that provide effective communication. Public entities must give primary consideration to the individual with a disability's preferred form of communication unless it can be demonstrated that another equally effective means of communication exists.

Are schools required to make testing accommodations for students with disabilities?

Schools must establish a process for making tests accessible to students with disabilities. Schools accomplish this by providing appropriate accommodations to students with disabilities. Although each student's needs are individual, examples of accommodations include allowing a student extended time to complete a test or providing a distraction-free space, sign language interpreters, readers, or alternative test formats. [Note: Testing accommodations are also required of agencies that administer college entrance exams and agencies/businesses that administer licensure and certification.]

The Transition Planning Process

DRAFT

10 TIPS TO GUIDE TRANSITION PLANNING

Fact Sheet

1. Start the process early³³

According to the IDEA, a transition plan must be included in a student's IEP once he or she turns 16. Thus, the transition planning process should begin sometime during a student's fifteenth year. Remember—starting the transition planning process early will typically result in better outcomes.

2. Utilize student strengths and interests

Every student excels in some areas and has difficulty in others. Be aware of a student's strengths and preferences and develop them into specific job skills. Successful transition planning focuses on strengths and interests, not deficits.

3. Co-Include Community-Based Instruction

The community is a natural teaching environment. The necessary skills for employment, independent living, and leisure cannot all be taught in the classroom environment. The classroom and community should not be thought of as separate entities—both are integral components to gaining essential experiences and skills. Teach skills in the classroom and ensure the student has opportunities to practice them in the community.

4. Utilize the school's resources

The transition planning process is driven by transition teams who work together to assist students in achieving their post-high school goals. Team members may include:

- The student
- Family members
- Special and general education teacher(s)
- Career/tech center personnel
- Transition coordinator
- Guidance counselor
- Agency/community representatives

5. Plan for transportation needs

Transportation is one of the most overlooked facets of transition planning. Imagine what your life would like if you could not drive. Many students with disabilities are not able to drive. Effective transition planning should address how the student will access services and the community if driving is not an option.

³³ Adapted from South Dakota Transition Services Liaison Project. (2006). *Cornerstones to Effective Transition Planning: Student and Parent Involvement*. Retrieved 8/9/2012 from <http://www.tslp.org/docs/Tacklebox/Cornerstones.pdf>.

10 TIPS TO GUIDE TRANSITION PLANNING

Fact Sheet

6. Involve the student

Student involvement is the cornerstone of effective transition planning. By law, a student's preferences, interests, and strengths must be considered during the planning process. Students should not only attend IEP meetings—they should be active participants. To facilitate greater student involvement, provide training and opportunities for students to develop self-advocacy and self-determination skills.

7. Follow a sequential, documented process

Effective transition planning does not happen by accident. When teams follow a sequential, documented process, the student's needs are more likely to be met. Consider utilizing checklists and student portfolios to plan from year to year.

8. Don't wait to make connections with adult service agencies

There are many adult services agencies that may provide services for students once they leave school. Begin by opening the lines of communication while the student is still in school, prior to the time service delivery will take place. Connecting students and families with outside agencies will allow service providers to develop a better understanding of the supports and services that may be needed and ensure a smoother transition through the eligibility and service delivery process.

9. Be creative

Effective transition planning involves flexibility, problem solving, and thinking outside of the box. The same transition plan will not work for every student. Encourage creative approaches when planning for a student's transition into postsecondary education and training. Think of the student's individual strengths, talents, and interests. Involve as many team players as possible and look for resources in different places.

10. Have high expectations

Throughout the planning process, encourage the student and other team members to develop challenging yet attainable goals. Utilize student skills and strengths to create a plan that will allow students to reach their full potential and lead happy and productive adult lives.

AGE-APPROPRIATE TRANSITION ASSESSMENT

Transition Planning Process

I. Age-appropriate Transition Assessment

The goal of transition assessment is to identify the strengths and needs of students with disabilities as they relate to future learning, living, and working environments. Ongoing, age-appropriate assessment is essential in developing realistic and meaningful postsecondary goals. It is also necessary for the continuous self-discovery and decision-making of students as it increases student self-awareness of interests and skills which are based more on reality than imagination.

Transition assessment should answer three basic questions:

1. Where is the student presently?
2. Where is the student going?
3. How will the student get there?³⁴

Assessment takes place within the larger transition process. The process begins with an initial assessment of students to gather information about students' strengths, interests, and preferences. From that initial assessment data, appropriate, measurable postsecondary goals are written. Based on the identified postsecondary goals, a coordinated set of transition services is designed to help the student to reach his or her postsecondary goals. Finally, more assessment data is collected to drive the continuation of the process.

An ongoing, cyclical assessment process has built-in flexibility that allows students to change their goals and alter their planning. By participating in this assessment process, students are at the center their transition planning. With student participation and data driving as the driving forces between postsecondary goal-setting, it is more likely that student interests, preferences and strengths will lead to appropriate, realistic, and desired goals. These types of goals more likely to result in post high school success.

A. Informal and Formal Transition Assessments

Transition assessments generally include both formal and informal assessment methods. Formal assessments are standardized instruments that have been tested for reliability and validity and that have been normed. The advantage of these tests is that they allow for comparisons of a given student's performance or measured interests to that of a peer group. Informal assessments lack the formal norming process and reliability and validity information.

³⁴ From A.R. Walker, L.J. Kortering, C.H. Fowler, & D. Rowe (2010). Age-Appropriate Transition Assessment Guide (2nd ed.), National Secondary Transition Technical Assistance Center. Retrieved 8/15/2012 from <http://www.nsttac.org/content/age-appropriate-transition-assessment-toolkit>.

AGE-APPROPRIATE TRANSITION ASSESSMENT

Transition Planning Process

This means that they tend to be more subjective. A major advantage of these assessments, however, is that they are often inexpensive and easy to use. Despite their less formal nature, informal assessments can provide a wealth of transition related information.

B. Transition Assessments Guide the IEP Transition Planning Process

Transition assessment should help students to identify their postsecondary goals. Informal and formal assessments can be used to determine what type of postsecondary education and employment a student is interested in; where and with whom that student wants to live after high school; what supports he or she will need in order to reach the postsecondary goals; and identify the skills necessary for attaining postsecondary goals.

Transition assessment information can also be used to write the present levels of performance in the IEP, which is the starting point for writing annual goals designed to help students reach their postsecondary goals. This information helps to answer the questions, “What does the student currently know or can currently do?” and “What does the student need to learn or need to do better?”³⁵

Transition assessment information can also be used to identify appropriate annual goals. This is done when the IEP team uses the data to determine what skills are needed to attain postsecondary goals, what skills the student already has, and what skills need to be developed for a student to progress toward meeting his or her postsecondary goals.

C. Triangulating Assessment Data

Data must be triangulated in order for any transition assessment information gathered about students to be meaningful. The process of triangulation requires that information be gathered through a variety of methods in order to find out what is expressed, what is tested, and what has been demonstrated. This process is important because standing alone different types of data do not always seem to match up. In order to see the full picture, it is important to gather and examine data from a variety of sources.

For example, imagine a student who states during an interview that she wants to become a computer repair person. She then takes an interest inventory. Knowing that she thinks that she wants to work with computers, she responds that she loves every activity that is related to computers and that she dislikes everything else. Not surprisingly, the inventory shows that she has a strong interest in careers in which she can work with computers.

³⁵ Rowe, D. A., Koertering, L., & Test, D. W. (2012). Transition assessment for instruction. In *Evidence-based instructional strategies for transition*. Baltimore, MD: Brookes.

AGE-APPROPRIATE TRANSITION ASSESSMENT

Transition Planning Process

Too often, educators and service providers stop collecting data at this point and start moving full-steam ahead with postsecondary planning to help the student become a computer repair person. However, when the final type of data is collected to allow for triangulation, they have one last chance to see if it's a real match. In order to see what kind of interests the student demonstrates, she might participate in a job site visit at a computer repair company. During the visit, her teacher observes that she looks completely bored, does not ask any questions, and fails to engage. Further, when she is asked where wants to go for job shadowing and she does not mention the computer repair company, it becomes clear that it is now time to step back and begin looking at career interests again. Had this student's teacher failed to triangulate assessment data, this student's transition plan would have continued to reflect post-high school planning around a career she was not truly interested in.

Besides collecting assessment data using a variety of *methods*, it is also important to collect data that provides insight into student interests, preferences, and functioning in a variety of areas. Assessment areas may include:

- Interests
- Preferences
- Independent living skills
- Recreation skills
- Self-determination skills
- Cognitive development
- Aptitudes
- Academic achievement
- Social skills
- Emotional development and mental health
- Adaptive skills
- School engagement
- Support system

TRANSITION ASSESSMENT FAQS

Fact Sheet

Fact Sheet: Transition Assessment Frequently Asked Questions

I. What is age appropriate transition assessment?

Transition assessment has been defined by the Division on Career Development and Transition of the Council for Exceptional Children as an “ongoing process of collecting data on the individual’s needs, preferences, and interests as they relate to the demands of current and future working, educational, living, and personal and social environments.”

Age appropriate refers to a student’s chronological, rather than developmental age.

II. What are the types of transition assessments?

Formal Transition Assessment Methods

- Adaptive behavior/daily living skills assessments can be used to help determine the type and amount of assistance individuals with disabilities may need in order to live as independently as possible.
- Aptitude tests measure a specific skill or ability. These assessments provide information that can be used in career decision making.
- Interest inventories provide information about a student’s preferences for certain careers, work activities, or types of work.
- Intelligence tests assess a student’s cognitive performance.
- Achievement tests measure learning of academic skills. Results can be linked to job and career requirements and can help to identify areas in need of remediation.
- Temperament inventories identify a student’s disposition towards various types of careers and work.
- Self-determination assessments provide information about a student’s readiness to make decisions and take actions related to their postsecondary goals.
- Transition planning inventories can help identify transition strengths and needs in various aspects of adult living including employment, education, independent living, interpersonal relationships, and community living.

Informal Transition Assessment Methods

- Interviews and questionnaires can be conducted with a variety of individuals in order to collect information to be used to determine a student’s strengths, needs, preferences, and interests related to postsecondary goals.
- Direct observations of student performance can be conducted within naturally occurring environments including school, employment, or community settings. Direct observation data often includes work behaviors and affective information.
- Curriculum-based assessments are designed by educators to gather information about a student’s performance in a specific curriculum and to develop instructional plans for a specific student. This data can be gathered through work samples, portfolios, and/or criterion-referenced tests.

TRANSITION ASSESSMENT FAQS

Fact Sheet

- Environmental analysis involves carefully examining environments where transition related and postsecondary activities occur. A critical part of this analysis should be to identify the types of accommodations that could be provided to help a student successfully manage the environment being analyzed.

How do I conduct an age appropriate transition assessment?

The transition assessment process will depend on the specific transition assessment tools and procedures being used and the characteristics of the student being assessed. Whatever process is followed, the following should be considered when conducting transition assessments³⁶:

- Incorporate assistive technology and accommodations that allow the student to fully demonstrate his or her abilities or interests
- Assessment should occur in environments that resemble actual education, employment, independent living, or community environments
- Assessments should produce information that will contribute to the ongoing development, planning, and implementation of transition planning
- Methods should be varied and include activities that sample a student's behavior and skills over time
- Data must be verified by more than one method and more than one person
- Data must be interpreted for the student, their family, and the IEP team members
- Data and results must be documented in a format that is useful to transition planning
- Methods should take into consideration the learning, cultural, and linguistic characteristics of the student
- Information should be current, valid, and relevant to transition

How do I select transition instruments?

In order to select appropriate instruments, you must become familiar with the instruments that are available to you. First, become familiar with the different types of transition assessments and their characteristics by:

- Reading the assessment manual
- Seeking independent information (e.g., test reviews, professional articles)
- Speaking with local adult service providers and employers

It is recommended that you use multiple assessments with each student on an ongoing basis. You must also select assessments that are appropriate for your students in terms of cognitive ability, cultural sensitivity, and language preferences.

³⁶ Sitlington, P. L., Neubert, D. A., & Leconte, P. J. (1997). Transition assessment: The position of the Division on Career Development and Transition. *Career Development for Exceptional Individuals*, 20, 69-79.

TRANSITION ASSESSMENT FAQs

Fact Sheet

Select the appropriate assessment instruments and methods that will help the student to answer the following questions:

- Who am I?
- What are my unique talents and interests?
- What do I want in life—now, and in the future?
- What are some of life’s demands that I can meet now?
- What are the main barriers to getting what I want from school and my community?
- What are my options in the school and community for preparing me for what I want to do—now, and in the future?

DRAFT

POSTSECONDARY LONG RANGE GOALS

Transition Planning Process

II. Postsecondary Long Range Transition Goals³⁷

Defining and clarifying a student's post-school dreams, visions, and outcomes gives teams the foundation to begin developing transition goals and objectives that reflect the skills a student will need to achieve his goals.

Ask yourself: *If we are to prepare students to successfully transition to the responsibilities of adult life, how can we accomplish this without knowing where the student is going?*

A. Student Questions

After discussing transition assessment results with their teachers and family, students should begin formulating their postsecondary goals. Three key questions will assist students in providing the information needed to complete the Postsecondary Goals section of the IEP. Answers will most likely change over time as students become more aware of their skills, talents, interests, and limitations.

1. Where do I want to **live** after completing high school?
2. What type of **work** do I want to do after completing high school?
3. How do I want to **learn** to do my job after completing high school?

B. Parent Questions

Parents and other family members play an important role in assisting students in developing postsecondary goals. There are a variety of ways to collect information from parents regarding visions and goals for their students' futures. Parent questionnaires sent home with students, or in-person or phone interviews with parents can help clarify the vision that parents have for their students' future. Possible questions to ask parents include:

- Describe your child's best possible day 10 years from now.
- Describe your child's worst possible day 10 years from now.
- What is your worst fear for your child?
- What are your short-term and long-term goals for your child's future?
- What are your child's goals for his or her future?
- Under what circumstances do you see your child flourishing most?
- Under what circumstances do you see your child struggling most?

³⁷ Adapted from Oklahoma State Department of Education Special Education Services. (2011). *Oklahoma's Transition Education Handbook*. Retrieved 8/9/2012 from <http://ok.gov/sde/sites/ok.gov.sde/files/documents/files/Handbook.pdf>.

POSTSECONDARY LONG RANGE GOALS

Transition Planning Process

C. Postsecondary Long Range Goal Requirements

Postsecondary goals set the course for the IEP transition plans because they represent what the student wants to achieve after high school. Each goal should be written in measurable terms and based on information about the student gained from age-appropriate transition assessments. Transition components in the IEP need to align to support students in attaining their postsecondary goals.

A student's IEP must include at least one goal in each outcome area:

- Education or Training (required)
- Employment (required)
- Independent Living (optional, include when appropriate)

Postsecondary goals must address further employment and education or training after high school. An independent living postsecondary goal is optional and developed only if the IEP team believes the student needs to acquire skills while in school to live where and how the student would like to live.

Tips for Writing Measurable Postsecondary Goals

- Use results-oriented terms such as "enrolled in," "work," "live independently"
- Use descriptors such as "full time" and "part time"
- Consider where the student hopes to be approximately one year after high school

D. Postsecondary Long Range Goals Checklist³⁸

The following questions may be helpful to IEP teams in planning a student's transition services and designing statements to include in a student's IEP.

- Is there a measurable postsecondary goal or goals for the student?
- Can the goal(s) be counted?
- Does the goal(s) occur after the student graduates from school?
- Are the postsecondary goals based on an age-appropriate transition assessment?
- Are there annual IEP goals that reasonably enable the child to meet the postsecondary goal(s) or make progress toward meeting the goal(s)?
- Are there transition services (including courses of study) in the IEP that focus on improving the academic and functional achievement of the child to facilitate his/ movement from school to post-school?
- Do the transition services listed in the IEP relate to a type of instruction, related service, community experience, development of employment and other post-school adult living objectives (and, if appropriate, acquisition of daily living skills), and provision of a functional

³⁸ From National Dissemination Center for Children with Disabilities (NICHCY). (2010). Transition Goals in the IEP. Retrieved from <http://nichcy.org/schoolage/transitionadult/goals>.

POSTSECONDARY LONG RANGE GOALS

Transition Planning Process

vocational evaluation?

- Are representatives of other agencies invited (with parent or student consent) to IEP meetings when transition services are being discussed that are likely to be provided or paid for by these other agencies?

E. What if Students Do Not Attain Their Long Range Postsecondary Goals?

While student success after high school is arguably the greatest outcome measure of the education system's success, various factors influence whether postsecondary goals can be attained, some of which are beyond an educator's influence. Postsecondary goals provide a target that students prepare to meet while in high school and help chart the course the IEP team should follow in planning for post-high school success.

Remember that LEAs are still responsible for services leading up to completion of the goals as provided in the IEP. In addition, the District of Columbia publicly reports on post-secondary outcomes as measured by Indicator 14 of the State Performance Plan.

DRAFT

ANNUAL SHORT-TERM MEASURABLE GOALS

Transition Planning Process

III. Annual Short-Term Measurable Transition Goals

Postsecondary Long Range Goals	Annual Short-Term Measurable Goals
<ul style="list-style-type: none">• Long-term• Determined by the student• Designed to be measured one year after graduation• Initially stated in broad terms, becoming more specific and refined each year• Must be related to student's strengths, interests, and preferences	<ul style="list-style-type: none">• Short-term• Determined by the IEP Team• Designed to be measured at least quarterly• Stated in specific terms• Must be related to postsecondary goals, present levels of performance, and transition activities

Annual transition goals describe what a student will learn within an academic year to show progress toward achieving his postsecondary goals.

Each annual goal is made up of three crucial components:

1. **Conditions:** The materials and environment necessary for the goal to be completed
2. **Behavior:** The action that can be directly observed and monitored
3. **Criterion:** How much, how often, or to what extent the behavior must occur to demonstrate that it has been achieved

At least one annual transition goal needs to be included in the IEP for each postsecondary goal. Annual goals are not mere statements of enrolling in a class or passing a class with a certain grade. Annual goals are about the skills that students will learn and master through the year.

In order to best position students and adults for success, annual goals must be written in a manner that allows for measurement of progress and, as needed, any necessary adjustment.

A. Annual Transition Goal Questions for Students

The following questions should be answered annually and are designed to help students create annual goals that correspond to their future goals and plans:

- What do I need to learn now to live where I want after graduating from high school?
- What do I need to learn now to do the job I want after graduating from high school?
- What do I need to learn now to be able to succeed in an educational program after graduating from high school?

Additionally, the following question should be asked to ensure that a student's annual IEP goals are aligned with the student's annual transition goals.

POSTSECONDARY LONG RANGE AND ANNUAL TRANSITION GOAL EXAMPLES

KEVIN

Postsecondary Long Range Goal Example

Within three months of graduation, Kevin will obtain a supported employment position that allows him to work to his maximum stamina and incorporates the use of assistive technology.

Annual Short-Term Measurable Goal Example

Kevin will participate in yearlong on-campus vocational preparation, including the following experiences, each for a period of three months, with a frequency of a minimum of two sessions each week, and session duration of one hour per session in the following positions: clerical job experience in school office, school based laundry enterprise, janitorial work experience throughout school building.

This goal is compliant and appropriate for the following reasons:

- Kevin will gain important employment skills from participating in these on-campus job experiences.
- Data from completion of the annual goal may provide Kevin's IEP team with information regarding his future employment strengths and interests.
- The goal statement includes specific criteria to attain this goal, including minimum level related to (a) duration of the work experience, (b) frequency of participation, and (c) as well as the duration of each work session.

JASON

Postsecondary Long Range Goal Example

After graduating from high school, Jason will enroll in a four-year college to obtain his undergraduate degree in history and education to become a high school social studies teacher.

Annual Short-Term Measurable Goal

Through participation in the district's teacher mentor program, Jason will write an essay about his expectations for his future career, including statements of: a goal, three or more negative aspects of teaching, three or more positive aspects of teaching and, a summary statement of the mentor program experience with 80% or better accuracy in grammar and spelling by March 2014.

This goal is compliant and appropriate for the following reasons:

- This annual goal supports Jason's postsecondary goal of becoming a high school teacher.
- Writing well and synthesizing information are district standards and align with his postsecondary goal of attending college.
- This is a step toward that postsecondary goal that can be completed while in high school.
- The annual goal includes a condition, criteria, timeframe, and an observable behavior.

POSTSECONDARY LONG RANGE AND ANNUAL TRANSITION GOAL EXAMPLES

JEREMY

Postsecondary Long Range Goal Example

Following graduation, Jeremy will be employed part-time in the community with supports.

Annual Short-Term Measurable Goal Example

Given staff supervision and school transportation to the sites, Jeremy will rank his preference of career opportunities using a picture symbol rubric through completion of community-based instruction at four different community employment sites for three two-hour sessions every week that school is in session for the duration of this IEP.

This annual goal is compliant and appropriate for the following reasons:

- The goal includes activities that will prepare Jeremy for postsecondary employment.
- The goal states conditions and a timeframe in which it should be accomplished.
- The goal states a measurable behavior and the activities stated are measurable

ALLISON

Postsecondary Long Range Goal Example

After college, Allison will have a career in the field of early childhood education.

Annual Short-Term Measurable Goal Example

Allison will describe the similarities and differences of various early childhood careers in a two page essay after conducting four structured interviews of employees in the field of early childhood including a professor, a child care director, and a preschool teacher, during the fall semester of this IEP."

This goal is compliant and appropriate for the following reasons:

- Describing aspects of related jobs is a logical step in helping Allison narrow her career path after college. (This annual goal may also provide Allison with information that will help her select courses in college that best prepare for a career in early childhood education.)
- The goal statement includes criteria, a timeframe, and is measurable.
- The goal statement indicates acquisition of knowledge, through the completion of a series of activities.

TRANSITION SERVICES: COORDINATED SETS OF ACTIVITIES

Transition Planning Process

IV. Transition Services: Coordinated Sets of Activities³⁹

Transition services are intended to prepare students to make the transition from the world of school to the world of adulthood. In developing an IEP, the IEP Team must consider a coordinated set of activities to assist the student in reaching his post-school goals. Coordinated activities are tasks or activities that students will complete to learn the skills and knowledge associated with each annual goal.

These activities may take place in the school, at home, or in a community-based setting. More specifically, activities must be based on the individual student's needs, preferences and interests. As such, the IEP team must consider and plan for:

- A functional vocational evaluation and course of training
- Acquisition of daily living skills (if appropriate)
- Any postsecondary education options
- Integrated employment, including supported employment

³⁹ Adapted from OSSE (2010, January). Secondary Transition Policy and Oklahoma State Department of Education, Special Education Services, *Oklahoma's Transition Education Handbook: Facilitating Transition of Students with IEPs from School to Further Education, Employment, or Independent Living*, 2011 Edition

TRANSITION SERVICES: COORDINATED SETS OF ACTIVITIES

Transition Planning Process

- Independent living goals and objectives
- Continuing and adult education
- Adult services
- Appropriate circumstances for referring a student or the student's parents to a governmental agency for services

A. Ensuring Successful Coordination

In choosing creating each coordinated activity, the IEP Team should:

- Ensure role clarity
 - Indicate the people who will be responsible for facilitating completion of each activity. Responsible persons could include general education teachers, co-workers, friends, or others who may be able to offer assistance to students in completing their transition goals.
- Ensure engagement
 - Consider and plan for appropriate parent involvement with the student's transition plan.
- Prepare the student for success
 - Review behavior expectations associated with any off-site environments, enable site visits and introductions of any new adults, and establish routines and schedules to reduce anxiety and increase predictability for the student.
- Ensure responsiveness
 - Provide the parent and student with points of contact for each activity and create a system for flagging and swiftly resolving challenges.

TRANSITION SERVICES: COORDINATED SETS OF ACTIVITIES

Transition Planning Process

Employment Service Examples		
<ul style="list-style-type: none"> • Vocational guidance and counseling • Vocational, psychological, or other types of assessment to determine vocational potential • Assistance in obtaining competitive, customized, or supported employment 	<ul style="list-style-type: none"> • Job development, placement, and follow-up services • Rehabilitation, technological services and adaptive devices, tools, equipment, and supplies • Assistance to begin a new line of work 	<ul style="list-style-type: none"> • Assistance with work expenses the individual has as a result of their disability • Information and referral services • Connecting students with mentors with disabilities
Postsecondary Education Service Examples		
<ul style="list-style-type: none"> • Vocational training • Apprenticeship programs 	<ul style="list-style-type: none"> • College training toward a vocational goal as part of an eligible student's financial aid package 	<ul style="list-style-type: none"> • Advocacy training • Connecting students with mentors with disabilities
Adult and Independent Living Service Examples		
<ul style="list-style-type: none"> • Advocacy training • Housing or transportation supports needed to maintain employment • Orientation and mobility services 	<ul style="list-style-type: none"> • Case management services to access and obtain local services • Therapeutic recreation, including day activities, clubs, and programs • Connecting with mentors 	<ul style="list-style-type: none"> • Training on independent living skills (attendant management, housing, transportation, career development) • Information and referral services

TRANSITION SERVICES: COURSE OF STUDY

Transition Planning Process

V. Transition Services: Course of Study⁴⁰

To be effective, transition planning must become a systematic and structured process in which entities collaborate to provide a continuum of services that address the individual strengths, needs, and interests of students. Program development, evaluation for improvement, and ongoing professional development are key components of this systematic approach.

A. Graduation Plan

During a student's eighth grade year, the IEP team must determine a student's course of study and assist the student in developing a graduation plan. LEAs must provide all students with disabilities, including students with significant disabilities, the opportunity to earn a high school diploma. If the IEP team determines a high school diploma is not appropriate, the course of study must assist the student in achieving an alternative to a high school diploma.

B. Course of Study and Transition Planning

Beginning with the IEP a student will have during his or her sixteenth year, IEPs must contain a description of the course of study necessary to assist the student in preparing for post-school activities.⁴¹ The course of study must ensure that the student has the knowledge and skills to qualify for and successfully complete at least one of the following paths:

- Two or four year postsecondary education program
- Technical/vocational program
- Apprenticeship
- On-the-job training leading to a postsecondary credential (i.e., certificate, license, Associates, or Bachelor's degree)

The course of study should directly relate to the student's present level of performance and the student's postsecondary goals. In addition, the course of study should be designed to:

- Improve the academic and functional achievement of the student to facilitate his movement to life after high school
- Align with the student's transition goals
- Align with academic requirements for a high school diploma or certificate of completion

⁴⁰ Office of the State Superintendent of Education (OSSE). (2010). Secondary Transition Policy, available at www.osse.dc.gov.

⁴¹ 34 CFR §300.320(b)(3).

TRANSITION SERVICES: COURSE OF STUDY

Transition Planning Process

C. Non-Diploma Course of Study

The following procedures apply whenever an IEP team determines to place a student on a non-diploma course of study:

- The school must provide the parents with written notification that the IEP team has determined that the student will be placed on a non-diploma course of study
- The school must provide information in understandable language to the student and his parents about the differences between a diploma and a non-diploma course of study
- The LEA must obtain the parent's written acknowledgement that the parents have been informed and understand that the student will be placed on a non-diploma course of study

Additionally, the student's IEP must contain a statement on why a standard diploma is not appropriate and that the parents and student have been fully informed of this decision.

NOTE: A transition plan and graduation plan is required regardless of whether a student is on a non-diploma or diploma track.

D. Nonpublic Students with IEPs in Nonpublic Programs

Students who have been placed in a nonpublic residential or day school must have the opportunity to access the same transition services that are available to students in general education settings. The LEA in which the student is enrolled is responsible for ensuring the student's course of study is consistent with the student's transition plan and all diploma or Certificate of Completion requirements.

NOTICE & INVITATION REQUIREMENTS

Transition Planning Process

VI. Providing Meeting Notice

A. Notification of Meeting Form

When an IEP Transition Team is planning on discussing information relating to transition, the notification of meeting form that is sent home to parents must include four essential items:

- An indication that transition goals and services will be discussed at the meeting
- An indication that the student will be invited to attend the meeting
- The student's name listed among named participants on the notification form
- If applicable, the staff member name (if known) and agency that may be responsible for paying for or providing transition services among the participants listed on the notification form

B. Participating Agency Attendance

Whenever a participating agency is likely to be responsible for providing or paying for transition services included in the plan, the LEA must invite a representative from that agency to attend and participate in the student's IEP meeting. However, LEAs must first obtain written parental consent (or student consent if the student has reached the age of majority) for the agency representative to attend. The signed consent form must be in writing and uploaded/faxed into SEDS.

C. Invite Student to Attend

Students of transition age must be invited to attend their IEP meeting. Document the student invitation on the Notification of Meeting form. Best practice recommends that students are introduced to transition terminology, roles of the IEP Team, and procedures *prior to* the students attending and participating in their IEP meeting. Please refer to the self-determination section of the Toolkit for more information on how to assist students in preparing to actively participate in their transition planning meetings.

D. Holding Meeting without Student Present

If a student has been invited to attend the transition IEP meeting but declines, the meeting may continue so long as steps have been taken (and thoroughly documented) to obtain information from the student and consider the student's preferences and interests throughout the planning process.

IEP TRANSITION PLANNING

Transition Planning Process

VII. IEP Transition Planning Team

A. Who belongs at an IEP Transition Meeting?

Depending on a student's needs, all or some of the following individuals may be members of a student's "Transition Team."

- The student
- The student's parents
- Special, regular, and/or vocational educators
- School psychologist
- School counselor
- Adult service providers
- Rehabilitative Services Administration (RSA) representative
- Employers
- Case manager

IEP TRANSITION PLANNING

Transition Planning Process

B. What is each Transition Team Member's Role?

Student

- Identifies career interests
- Shares views about various postsecondary options
- Identifies academic strengths, weaknesses, and learning styles
- Describes and prioritizes necessary accommodations and modifications
- Makes decisions about the future
- Demonstrates self-advocacy skills by explaining and requesting necessary supports and accommodations

Parent or Guardian

- Shares information about the student's interests and motivations
- Describes available support systems for the student to pursue postsecondary opportunities (e.g., transportation, housing, financial support)
- Provides information about the student's independent living skills and assistance the student may need in order to achieve the desired post-school goals
- Keeps records of the student's comprehensive evaluations, IEPs, educational achievement documents, and a portfolio of the student's class projects
- Supports their student in organizing all communications and documents from the postsecondary settings
- Is actively engaged as an equal partner in all aspects of IEP planning, discussion, and decision making

Special Education Teacher

- Coordinates the people, agencies, services or programs in the transition planning (when applicable)
- Provides information about the student's strengths, past achievements, and progress on the current IEP
- Provides examples of the student's coursework
- Develops curricular adaptations to meet student's anticipated postsecondary needs
- Provides instruction in the learning strategies that will help the student meet reading, writing, and test taking requirements in future postsecondary settings

IEP TRANSITION PLANNING

Transition Planning Process

- Ensures that classroom and testing accommodations are student-appropriate and documented
- Suggests courses of study and educational experiences that relate to the student's performance and interests and provide the foundation and skills to help the student achieve desired post-school goals

General Education Teacher

- Provides information about the student's strengths, past achievements, and progress on the current IEP
- Brings examples of the student's coursework
- Assists in planning the courses of study in the general education curriculum that will assist the student in meeting desired post-school goals
- Offers counsel on appropriate academic coursework to enable student to prepare for postsecondary educational settings
- Ensures that classroom and testing accommodations are student-appropriate and documented

DRAFT

IEP TRANSITION PLANNING

Transition Planning Process

VIII. IEP Transition Meeting Process⁴²

A. Before the IEP Meeting

- Assist students and parents to determine needs, preferences, and interests related to life after high school.
- Encourage parents to actively participate in the IEP meeting.
- Conduct appropriate assessment activities to determine the student's needs, preferences, and interests.
- Formally invite the student to participate in the IEP process and meeting.
- Provide written notice of the IEP meeting to parents, students, and outside agencies. If parents choose not to attend, document attempts to involve them.
- If the student chooses not to attend the IEP meeting, use other means to gather and share information about his or her needs, interests, and preferences.
- If an invited agency chooses not to attend the IEP meeting, use other means to ensure their participation in the planning and decision-making regarding transition service. Document these efforts and include them in the IEP.

B. During the IEP Meeting

Actively involve the student and parents in the IEP meeting. Review the student's present level of performance, focusing on the student's strengths, needs, interests and preferences to guide the development of:

- Outcome-oriented post-secondary goals
- A statement of transition service needs that specifies the courses of study in which the student will be involved through graduation with a regular diploma or until reaching the maximum age for special education.
- A statement of needed transition services to achieve the student's desired post-school goals through a coordinated set of activities including instruction, related services, community experiences, employment, daily living skills, and other adult living objectives
- Annual goals and objectives for the coordinated set of activities that are part of special education services for the current school year.
- Agreement of who will provide and/or pay for the activities outlined in the statement of needed transition services.

⁴² From Storms, J., O'Leary, E., & Williams, J. (2000). *Transition Requirements: A Guide for States, Districts, Schools, Universities, and Families*. Retrieved 8/9/12 from <http://www.ncset.org/publications/related/idea97.pdf>.

IEP TRANSITION PLANNING

Transition Planning Process

C. After the IEP Meeting

- Provide the instruction, experiences, supports, and services outlined in the IEP.
- Conduct follow-up activities to ensure the student is achieving the IEP goals.
- Review the courses of study and transition services that have been provided and plan for the coming years.
- Assist the student and family by linking them to any needed post-school adult services, supports, or programs.
- Reconvene the IEP team to plan alternative strategies if the transition services are not provided as planned.
- Conduct annual review.

DRAFT

SUMMARY OF PERFORMANCE

Transition Planning Process

IX. Summary of Performance⁴³

A. Purpose

The purpose of the Summary of Performance (SOP) is to provide a summary of the student's academic achievement and functional performance in order to assist the student in transitioning to postsecondary employment, training, and educational opportunities.

In compliance with the IDEA 2004 and OSSE policy, LEAs are required to create a Summary of Performance (SOP) for a student at least **60 days** prior to the student's pending graduation or prior to the semester in which a student will attain the age at which he or she exceeds the District of Columbia's age eligibility for a free appropriate public education (FAPE).

If correctly drafted, the SOP serves as a valuable snapshot of a student's academic and functional abilities. The SOP also provides documentation that a student's disability currently exists (although an SOP is not sufficient on its own to document a disability for RSA purposes). Because SOPs are completed at the end of a student's high school career, they also give IEP Teams a final opportunity to assist students and families in taking the next steps toward plans for post-secondary employment, training, and education.

B. Information to Include

The SOP must include a summary of the student's academic achievement, cognitive, and functional performance and recommendations on how to assist the student in meeting his post-high school goals.

Standing alone, a student's IEP or SOP does not contain sufficient documentation of a disability. Because adult service agencies require students to provide documentation of their disability in order to receive services, it is recommended that LEAs include and attach copies of the most recent psychological or neuropsychological assessment reports that address a student's academic, cognitive, and functional performance and any other documents that were instrumental in making determinations regarding the student's disability or that will assist in postsecondary planning.

C. Including Student Feedback

The SOP is a valuable tool that allows students to summarize their abilities and describe the accommodations they will need to be successful in reaching their postsecondary goals. When

⁴³ Information adapted from OSSE, Secondary Transition Policy, January 5, 2010 and the U.S. Department of Education's Q and A: Questions and Answers on Secondary Transition, Revised September 2011, available at: <http://idea.ed.gov/explore/view/p/%2Croot%2Cdynamic%2CQaCorner%2C10%2C>

SUMMARY OF PERFORMANCE

Transition Planning Process

students are involved in the SOP drafting process, they develop greater awareness and self-advocacy skills through learning to articulate their disability and how it impacts their education.

In order to facilitate student participation in the drafting process, the SOP contains a “Student Perspective” section that allows students to participate in sharing information about their individual strengths and abilities and give feedback about accommodations and supports that have and have not worked in the past. The questions are as follows:

1. *How does your disability affect your academic work and school activities (such as grades, relationships, assignments, projects, communication, time on tests, mobility, extra-curricular activities)?*
2. *What supports have been tried by teachers or by you to help you succeed in school (aids, adaptive equipment, physical accommodations, other services)?*
3. *Which accommodations and supports worked best for you?*
4. *Which accommodations and supports have not worked for you?*
5. *What strengths and needs should professionals know about you as you enter the postsecondary education or work environment?*

These questions can be given to a student to complete in writing prior to finalizing the SOP document or they can be recorded during an informal interview between the student and a member of the IEP Team. In circumstances where a child is non-verbal, these questions could be completed by a family member. Some LEAs follow the best practice of presenting these questions to students at the beginning of their last year of high school and use this information (or lack thereof) as a tool to identify additional goals or activities for the year.

D. Accompanying Documentation

Although the information found in the SOP can be useful in identifying reasonable postsecondary accommodations and supports, an IEP or SOP does not provide sufficient documentation of a disability to establish eligibility with adult service agencies and other postsecondary institutions/service providers. When providing a student with his/her SOP, an IEP team should also provide accompanying documentation such as a current (no less than three years old) psychological or neuropsychological report to aid the student in accessing additional disability-related support services upon graduation.

TRANSFER OF RIGHTS AND NOTICE REQUIREMENTS

Transition Planning Process

X. Transfer of Rights at Age of Majority

“Age of majority” is the legal age established under state law at which an individual is no longer considered to be a minor and, as a young adult, has the right and responsibility to make certain legal choices that adults make.

Prior to the time when a student turns 17, LEAs must provide notice to both the student and the student’s parents that the rights under Part B of the IDEA will transfer to the student upon reaching the age of 18 (except in cases where a student has been determined to be incompetent under District of Columbia law). Additionally, the student’s IEP must include a statement indicating that the student and his parents have been informed of the upcoming transfer of rights.

When a student reaches age 18, the LEA must provide notice to the student and the student’s parents of the transfer of rights as part of the procedural safeguards. The rights regarding educational records must also be transferred to the student and the LEA must include a statement indicating the transfer in the notice.

A. Continued Parent Involvement

It is important that IEP teams continue to involve parents in the transition planning process even after educational decision-making rights transfer to the student. Although a transfer of rights allows students to begin developing greater self-advocacy skills as they take the lead in planning and decision making, it does not mean a student no longer needs support or advice from parents and others who care about their success. Parents should not feel pressured by schools to obtain guardianship as a prerequisite for continuing to attend IEP meetings. Under the IDEA, parents may continue to participate as IEP Team members, either upon invitation of the student (through formal or informal means) or the school⁴⁴. Even after a student reaches

What Rights Are Transferred?

When students reach the age of majority, all of the educational rights that once belonged to their parents transfer to the student, including the rights to:

- Receive notice of and attend individual education program meetings
- Consent to reevaluation
- Consent to change in placement
- Request for mediation or a due process hearing to resolve a dispute about:
 - Evaluation
 - Identification
 - Eligibility
 - IEP
 - Placement
 - Other aspects of a free appropriate public education (FAPE)

⁴⁴ 34 CFR §300.321(a)(6).

TRANSFER OF RIGHTS AND NOTICE REQUIREMENTS

Transition Planning Process

the age of majority, parents still have much to contribute and play an important role in motivating and assisting their students in reaching their post-secondary goals.

B. Alternatives to Transferring Rights

Some students may not be able to recognize when a decision needs to be made, consider possible options, or recognize the consequences of their decisions without additional support. For these students, guardianship, conservatorship, or another form of representation by an advocate may be appropriate.

C. Prior Written Notice⁴⁵

Prior to when a student completes the last semester of secondary school in which he is expected to graduate with a diploma or certificate of completion, the LEA must provide the student (if over age 18) and his parents with a Prior Written Notice (PWN) of the discontinuation of special education services at the end of the school year. The PWN must clearly state that the student will no longer be entitled to receive special education services from the LEA at the conclusion of the school year.

⁴⁵ OSSE secondary transition policy, pg. 6

Student-Focused Planning

STUDENT-FOCUSED PLANNING

STUDENT-FOCUSED PLANNING⁴⁶

Student-focused planning is one of the five components of Kohler's Taxonomy for Transition Planning. It is a strategy that can be used in the development of a student's IEP and transition planning that encourages student participation in the IEP process. Student-focused planning tends to be driven by student interests, strengths, and goals. Once students set goals through student-focused planning, they work with their IEP team to plan, make decisions, and evaluate their progress toward attaining their goals.

Finding time to actively engage students in the transition process can be difficult, but many educators find that the benefits are worth the time that it takes. Student-focused planning enables service providers to create a more meaningful transition plan and provides students with the opportunity to develop many of the skills necessary for postsecondary success. Research on student-focused planning has identified five important benefits to this process.

Why involve students with disabilities in their transition planning?

1. To provide students with opportunities to make important decisions
2. To encourage school completion
3. To encourage family involvement
4. To teach important life skills
5. To encourage independence

First, student-focused planning **allows students to make important decisions about their lives**. A student's preferences, interests, and choices in the areas of education, employment and independent living are at the center of student-focused planning. When students are encouraged to actively participate in the IEP and transition planning process, they are given the opportunity to practice making important life decisions in a supportive environment.

Involving students with disabilities in the transition planning process can also **improve school completion**. In part, this is because student involvement in transition planning can help to make coursework relevant and meaningful to the lives of students. When students find their coursework to be relevant, they are more likely to continue in school.

Third, student-focused planning often **encourages family involvement**. Family involvement has been connected to school completion and improved postsecondary outcomes for youth with disabilities.

Next, students can **develop important life skills** through active involvement in the IEP and transition process. Through this process, students can develop skills related to goal setting, planning, and attainment. Further, students practice important skills related to self-advocacy and self-determination as they are given opportunities to speak up and learn about their disability and the supports that they will need to be successful after high school.

⁴⁶ Test, D. W. (2012). *Evidence-based instructional strategies for transition*. Baltimore, MD: Brookes.

STUDENT-FOCUSED PLANNING

Finally, student-focused planning **provides opportunities for students to develop independence**. In student-focused planning, students are often asked to take on a leadership role in the IEP process through a gradual process, giving students the opportunity to become increasingly independent as they are taught the skills necessary to take on that leadership role.

Before students are able to actively participate in their transition planning process, they will need to be taught the knowledge and skills necessary for active participation. Students will need to develop an awareness of their strengths, disability, areas of need, and interests. Students will also need instruction in the skills needed to participate in the IEP process, such as asking questions, listening to others, decision making, and problem solving.

DRAFT

SELF-DETERMINATION

Student-Focused Planning

I. Self-Determination

Self-determination⁴⁷ is a critical concept related to successful post-secondary outcomes for youth with disabilities. An individual is self-determined when she can make her own choices, solve problems, set goals, and take action to reach those goals.⁴⁸ Without self-determination, a student will be unable to meaningfully participate in the transition planning process and will be less likely to accomplish any goals that are developed for him or her.

Sharon Field has conducted extensive research in the field of self-determination. Her research has led to the development of a model for self-determination that includes 6 components:

1. Know yourself
2. Value yourself
3. Plan
4. Act
5. Experience outcomes and learn
6. Environment⁴⁹

Self-Determination

“Self-determination is a combination of skills, knowledge and beliefs that enables a person to engage in goal-directed, self-regulated, autonomous behavior. An understanding of one’s strengths and limitations together with a belief in one’s self as capable and effective is essential to self-determination. When acting on the basis of these skills and attitudes, individuals have greater ability to take control of their lives and assume the role of successful adults in our society.”

Field, S., Martin, J., Miller, R., Ward, M., & Wehmeyer, M. A. (1998). *Practical Guide to Teaching Self-Determination*. Reston, VA: Council for Exceptional Children.

⁴⁷ Test, D. W. (2012). Evidence-based instructional strategies for transition. Baltimore, MD: Brookes.

⁴⁸ Schall, C. & Thoma, C. A. (2010). Quality educational outcomes and annual goals. In *Getting the most out of IEPs: An educator’s guide to the student-directed approach*. Baltimore, MD: Brookes

⁴⁹ Secondary Transition Training Module “Self-Determination”

SELF-DETERMINATION

Student-Focused Planning

1. Know Yourself

The most basic component of self-determination is self-knowledge. In order to develop the necessary self-knowledge, students must be given opportunities to:

- Understand their needs, preferences, strengths, and weaknesses
- Become aware of their options
- Acknowledge what is important to them

2. Value Yourself

The second foundation for self-determination is for students to learn to value themselves. For students to learn to value themselves, they must learn to accept their strengths and weaknesses and take responsibility for their successes and failures. Students are able to do this when they can:

- Accept themselves
- Acknowledge and appreciate their unique strengths
- Respect rights and responsibilities
- Be good to themselves

3. Plan

The next component of self-determination is the ability to plan. Planning involves a number of important skills such as goal setting. Students are able to plan when they can:

- Set goals
- Make plans to meet goals
- Anticipate positive and negative consequences of potential actions

4. Act

Planning should always lead students toward action to reach their goals. Therefore, acting is the fourth component of self-determination. Students can act when they can:

- Take appropriate risks
- Identify and utilize resources and support
- Communicate
- Respond to feedback
- Initiate action independently as needed

SELF-DETERMINATION

Student-Focused Planning

5. Experience Outcomes and Learn

The fifth component of self-determination is for students to experience outcomes from their actions and learn from the experience. Students are able to experience outcomes and learn when they can:

- Evaluate differences between the actual outcome and expected outcome of their actions
- Celebrate successes
- Deal with criticism or failure

6. Environment

The final component of Field's self-determination model is the environment that is created for students. Environments can either support or hinder the development of student self-determination. Environments that support self-determination provide:

- Clear learning objectives
- Specific and timely feedback
- Ways for learners keep track of their progress
- Tasks at learners' levels
- Ways for learners to share their strengths and needs

SELF-DETERMINATION FAQs

Fact Sheet

Frequently Asked Questions about Self-Determination

Why is self-determination important?⁵⁰

Students who have been taught self-determination skills have been found to do better in school and have better employment outcomes. Further, it is important for students to develop the skills and knowledge necessary for self-determination while in high school because they will no longer be entitled to services once they enter postsecondary settings. In order to receive the services and accommodations they need, youth will need to understand their disabilities in order to disclose, explain, and advocate for their needs.

What skills are necessary for self-determination?

Many definitions of self-determination include common characteristics and skills that a student must develop in order to become more self-determined:

- **Self-awareness:**
 - The ability to identify and understand personal needs, interests, strengths, limitations, and values
- **Self-advocacy:**
 - The ability to express personal needs, wants, and rights in an assertive manner
- **Self-efficacy:**
 - The belief that one will attain a goal
- **Decision-making:**
 - The skill of setting goals, identifying possible plans, considering consequences, and choosing the best option to reach goals
- **Independent performance:**
 - The ability to initiate and complete tasks independently
- **Self-evaluation:**
 - The ability to self-assess performance and determine when a goal or task has been satisfactorily completed
- **Adjustment:**
 - The ability to revise personal goals and plans

It is important to realize that all students are capable of developing these skills. No disability is so severe that a student will be completely unable to develop these skills and communicate his

⁵⁰ Adapted from National Center on Secondary Education and Transition

SELF-DETERMINATION FAQs

Fact Sheet

or her choices. Often it is the lack of *opportunity*, rather than the disability, that leads to a failure to become self-determined.

What can educators do to encourage the development of self-determination?

- Work with parents to promote the development of self-determination skills
- Facilitate student-centered planning and student-directed learning
- Increase students' awareness of their disabilities and needed accommodations
- Offer courses on self-determination
- Teach and promote self-advocacy skills and students' use of those skills
- Infuse self-determination into the general education curriculum

DRAFT

STUDENT-DIRECTED IEPS

Student-Focused Planning

II. Student-Directed IEPs

A student-directed IEP process involves students with disabilities in the IEP process to the maximum extent possible.

Many think of the IEP process as only consisting of the activities that take place in the annual IEP meeting. A successful IEP, however, can be thought of as consisting of three components that take place throughout the year: pre-meeting preparation, the meeting itself, and the post-meeting implementation and evaluation.⁵¹ Each of these components presents opportunities for active student involvement in the IEP process.

When one considers the IEP as an ongoing process, it is easier to identify opportunities for students to be actively involved in that process. Opportunities for student involvement include:

1. Identifying strengths, needs, and present levels of performance
2. Participating in goal setting, planning, and evaluation activities
3. Preparing a formal presentation for the meeting
4. Communicating interests and preferences before and during the meeting
5. Participating in conversations about postsecondary goals, plans, and needs
6. Identifying and advocating for needed accommodations⁵²

The level of student participation and leadership during the IEP process exists along a continuum. Considering the variety of activities that make up the IEP process can help educators think about how to increase student involvement and leadership of the process beyond simply attending and participating in the annual meeting.

Although student leadership of the entire IEP process may be unrealistic or ill-advised for some students, it should still be the ideal for which IEP teams strive. It is important to determine where each student is on the continuum and move that student even closer to the ideal. The level of student participation and direction should increase between each IEP meeting. It is also important to realize that not all students have to start at the first stage. Instead, students

⁵¹ Thoma, C. A., Saddler, S., Purvis, B., & Scott, L. A. (2010). Essentials of the student-directed IEP process. In *Getting the most out of IEPs: An educator's guide to the student-directed approach*. Baltimore, MD: Brookes

⁵² Thoma, C.A.---

STUDENT-DIRECTED IEPS

Student-Focused Planning

should start at the stage that is right for them; this means they are asked to perform tasks that are difficult, but not impossible.⁵³

There is a seven step process that can help to identify opportunities, strategies, and methods that can be used to increase student participation and direction of the IEP process.⁵⁴

Step 1: Involve Student in IEP Planning Process

In order for students to become actively involved in the IEP planning process, they will need to be taught about the process itself. This includes learning about the activities, terms, and participants. Students can also be encouraged to write scripts of what they can say during the IEP meeting and then provided with an opportunity to practice using their scripts before the meeting. Finally, it is important that all IEP team members, including parents, are taught how to support and encourage the student's active involvement. Note: When students attend meetings, it is extremely important to ensure that the adults involved do not speak about the student as if he or she were not present. In addition, it is particularly important to use strengths-based, rather than deficits-based, language.

Step 2: Student Completes a Three-Part Transition Assessment

IDEA 2004 requires that transition assessments be used to help the student select appropriate postsecondary goals. It is a good idea to administer assessments in at least three areas. The first area is *career interests and exploration*. These assessments can help students to determine their postsecondary employment goals, which will also inform postsecondary education and training goals. The second area is assessments related to *independent living*, which will inform the postsecondary goals in the area of independent living. Finally, students should take assessments of *self-determination*. The results of these assessments can help students identify annual transition goals.

Simply administering assessments is not enough. It is important that students are given the opportunity to review the assessment results with a teacher. After reviewing the results, students can work with their IEP team to write their transition present levels of performance and goals based on the assessment results.

⁵³ Thoma, C. A., Saddler, S., Purvis, B., & Scott, L. A. (2010). Essentials of the student-directed IEP process. In *Getting the most out of IEPs: An educator's guide to the student-directed approach*. Baltimore, MD: Brookes.

⁵⁴ Secondary Transition Training Module "Student Centered Planning"

STUDENT-DIRECTED IEPS

Student-Focused Planning

Step 3: Student Writes and Presents Present Levels of Performance

The student and special education teacher should work closely together to write a comprehensive statement about the student that includes:

- Student's strengths and weaknesses
- Supports that help with learning
- What interferes or limits learning
- Data from current assessments and evaluations
- The impact of the student's disability on his or her ability to access the general education curriculum

Step 4: Student Develops a Course of Study

The next step is to teach students how to be actively engaged in selecting their course of study. Teachers should review graduation requirements, transcripts, course offerings, and extracurricular opportunities with the student. It is also important that students are encouraged to select a course of study that is aligned with their postsecondary goals.

Step 5: Student Develops and Attains IEP and Personal Goals

Students should be taught strategies that they can use to write and attain both IEP and personal goals. Teachers will likely need to teach and model a specific goal setting and attainment strategy and will need to provide students with opportunities to use the strategy in a number of settings. Students should work with their IEP team to identify both short- and long-term goals.

Step 6: Student Assists in Building Post-School Linkages

In order to ensure a seamless transition into postsecondary settings, it is important that post-school linkages are made before the student leaves high school. Students can be involved in this process as they begin to build relationships with postsecondary service providers. Providers may include the Rehabilitative Services Administration (RSA), the Developmental Disabilities Administration (DDA), postsecondary education disability support services offices, supported employment programs, health care providers, and transportation support programs.

STUDENT-DIRECTED IEPS

Student-Focused Planning

Step 7: Student Writes Student-Directed Summary of Performance

IDEA 2004 requires that LEAs provide students with a summary of their academic achievement and functional performance upon graduation through the Summary of Performance (SOP). The SOP identifies postsecondary goals and recommendations for reaching those goals and can be used as a tool throughout the transition planning process. Students can begin writing their own SOP as early as middle school. The SOP is most effective when it is used as a tool for students to explore and articulate their postsecondary goals over time. When this process is used, the SOP becomes an accurate reflection of students' postsecondary plans, rather than just a few statements quickly written to meet a requirement.⁵⁵

⁵⁵ Getzel, E. E., Deschamps, A., & Thoma, C. A. (2010). Transition individualized education planning and summary or performance. In *Getting the most out of IEPs: An educator's guide to the student-directed approach*. Baltimore, MD: Brookes.

CONSIDERING CULTURAL & LINGUISTIC BACKGROUNDS

Student-Focused Planning

III. Considering Cultural and Linguistic Backgrounds⁵⁶

The population of students receiving special education services in the United States is becoming increasingly diverse. Working with students from culturally diverse backgrounds, especially when they have disabilities, can be challenging.

In order to provide culturally appropriate services, educators must accept differing cultural identities, allow for language preferences, and respect religious beliefs. It is also important to recognize some of the family and cultural barriers that may impact the student's and family's level of participation in the IEP and transition process.

Considering culture during the transition process is an essential part of individualizing the process. In order to make cultural considerations a part of the transition planning process, practitioners must examine the student's beliefs, values, customs, perceptions, and family expectations. Practitioners should also examine the postsecondary culture and environment into which the student will transition. Schools and workplaces are all characterized by a particular culture and in each culture different behaviors are seen as acceptable and unacceptable. It is important to identify any possible conflicts between the student's culture and the postsecondary environment in order to give the student the opportunity to learn the behavior that will be needed for postsecondary success.⁵⁷

Strategies for Working with Culturally and Linguistically Diverse Students and Families⁵⁸

- Find out how disability, education, and support services are viewed by different ethnic and religious groups.
- Talk to students, families, fellow staff members, and other teachers to learn more about the cultural characteristics of the students that you work with.
- Do not assume that you know what the family needs in order to participate in the IEP meeting. Families should be invited to request any necessary accommodations (translators, large print materials, special meeting time, etc.).
- Make sure that you have enough time to have materials, forms, and documents translated when necessary.

⁵⁸ Xu, Y., Purvis, B., & Terpstra, J. E. (2010). Involving families in the process and multicultural considerations. In *Getting the most out of IEPs: An educator's guide to the student-directed approach*. Baltimore, MD: Brookes.

CONSIDERING CULTURAL & LINGUISTIC BACKGROUNDS

Student-Focused Planning

- Give students and family members sufficient time to respond during meetings.
- Offer a choice of language for communication.
- Offer a variety of levels at which students and families can participate in the IEP process.
- Use culturally appropriate language.

The challenges that commonly impact culturally and linguistically diverse (CLD) youth with disabilities in transition are summarized in the table below. While it may be possible to address these challenges on an individual basis, solutions for most of them really require action and change at the broader school or system level. Transition personnel can contribute by advocating for change and also encouraging youth and families to communicate their opinions and needs to the appropriate decision-makers.

For more information on considering the needs of culturally and linguistically diverse youth, refer to:

- The National Center on Secondary Education and Transition's (NCSET) *Essential Tools: Improving Secondary Education and Transition for Youth with Disabilities Cultural and Linguistic Diversity: Implications for Transition Personnel*, available at http://www.ncset.org/publications/essentialtools/diversity/EssentialTools_Diversity.pdf
- The PACER Center's *Building Program Capacity to Serve Youth with Disabilities: Working with Family, Culture, and Disability*, available at <http://www.ncwd-youth.info/node/451>

CONSIDERING CULTURAL & LINGUISTIC BACKGROUNDS

Student-Focused Planning

CHALLENGES	WHAT TRANSITION PERSONNEL CAN DO
CLD youth with disabilities may not be well included in the social life of the school.	<ul style="list-style-type: none"> • Provide individualized social skills training. • Link youth with peer or adult mentors to support social skill development. • Advocate establishment of school-wide climate of acceptance. • For youth with more severe disabilities, create “circles of support.” • Involve family and community.
CLD youth with disabilities may lack attitudes, skills, and knowledge for self-determination and self-advocacy.	<ul style="list-style-type: none"> • Support youth to meaningfully participate in, and preferably lead, their IEP/ITP planning meetings. • Conduct training using culturally sensitive self-determination and/or self-advocacy curricula and include family and community in the training. • Link youth with peer or adult mentors to model attitudes and skills.
CLD youth with disabilities may be at risk for poor academic achievement or dropping out.	<ul style="list-style-type: none"> • Convey high expectations to youth. • Link youth with mentors to encourage commitment to academic excellence. • Advocate for increased cultural competence of instruction. • Seek the input of cultural experts. • Advocate for disciplinary approaches that do not encourage youth to drop out.
CLD youth with disabilities may have poor English proficiency.	<ul style="list-style-type: none"> • Access school or community English tutoring programs. • Link youth with mentors to practice English.
CLD youth with disabilities may lack access to assistive and/or information technologies.	<ul style="list-style-type: none"> • Identify technology needs of youth for different transition settings. • Support youth/families to identify and access needed technology resources.
CLD youth with disabilities may lack financial resources for postsecondary education.	<ul style="list-style-type: none"> • Support youth/families to identify and apply for sources of financial aid. • Support youth/families to identify and apply for Social Security Administration programs.

RELATED SERVICES

Student-Focused Planning

IV. Related Services

Related services help students with disabilities benefit from their education by providing them with any extra help and support that they may need. IDEA 2004 states that related services should be considered when identifying transition services. It is important that as students reach transition-age, related services begin to focus on providing students with the services they will need in order to reach their postsecondary goals. For example, an occupational therapist can help to identify assistive technology and other supports in order to promote a student's employment in a community-based setting⁵⁹.

It is also important that assistive technology (AT), environmental adaptations and accommodations be considered by identifying what the student will need in both school and post-school settings. Decisions about these matters should be made by the IEP team and driven by the preferences and needs of the student. A framework that can help the team to make these decisions is to consider the following areas⁶⁰:

1. The student's strengths and needs
2. Environments and situations in which help may be needed
3. Tasks the student will need to complete in order to reach his or her goals
4. Tools that might be useful to help the student to complete the identified tasks

Tips for Identifying Related Services, AT, Accommodations, and Environmental Adaptations⁶¹

- Help students to develop self-awareness so that they can become more informed about their needs and able to advocate for the services and tools that they require now and in the future

Related Services Examples

- Audiology Services
- Counseling/Behavioral Support
- Interpreting Services
- Medical Services
- Occupational Therapy
- Orientation and Mobility Services
- Parent Counseling and Training
- Physical Therapy
- Recreation Services
- Rehabilitative Counseling
- School Health Services
- Social Work
- Speech-Language Pathology Services
- Transportation Services

⁵⁹ Targett, P. S. & Wehman, P. (2010). Related services. In *Getting the most out of IEPs: An educator's guide to the student-directed approach*. Baltimore, MD: Brookes

⁶⁰ Zabala, J. (2005). *Using the SETT Framework to level the learning field for students with disabilities*. Retrieved from http://www.joyzabala.com/uploads/Zabala_SETT_Leveling_the_Learning_Field.pdf

⁶¹ McManus, S., Smith, F., & Jones, S. (2010). Assistive technology. In *Getting the most out of IEPs: An educator's guide to the student-directed approach*. Baltimore, MD: Brookes.

RELATED SERVICES

Student-Focused Planning

- Become knowledgeable of related services, AT, accommodations, and adaptations so that you can help students to begin thinking about their possible needs and teach them how to advocate for their rights
- Invite relevant people to IEP meetings, including service providers and experts in areas such as AT
- Provide students with an opportunity to actively explore the AT and accommodations that may be helpful to them. It is best if this can be done before any technology is purchased. This process will help to match AT and accommodations to student needs and preferences
- Consider AT, accommodations, environmental adaptations, and related services for all students, not just those with severe disabilities

DRAFT

SKILL DEVELOPMENT

Student-Focused Planning

V. Skill Development

A. Academic Skills

Research indicates that far too many students with disabilities are failing to reach the basic goal of earning a high school diploma. Students with disabilities who do not complete high school report that dislike of their school experience and poor relationships with teachers and peers are top reasons for dropping out. Student-centered planning can be one way to combat these issues as it should result in coursework that matches students' interests, preferences, and needs⁶². Other suggestions for increasing student engagement in schooling include⁶³:

- Active engagement:
 - Increasing the amount of time that students are appropriately engaged in learning tasks through effectively designed and delivered lessons, selection of relevant and appropriate learning materials, multiple opportunities for student response during lessons, and positive reinforcement for class participation
- Providing experiences of success:
 - Giving students the opportunity to experience success early and often when engaged in learning tasks
- Grouping for instruction:
 - Using flexible grouping techniques (whole-group, small-group, one-to-one) to increase student engagement, success, and learning
- Addressing forms of knowledge:
 - Providing declarative knowledge (facts and vocabulary), procedural knowledge (steps to solve problems), and conditional knowledge (when and where to use strategies) during each lesson
- Organizing and activating knowledge:
- Teaching strategically:
 - Teaching students how to learn
- Making instruction explicit:
 - Teaching systematically and explicitly by clearly stating lesson goals and objectives, structuring the lesson logically, and presenting content directly and clearly
- Teaching sameness:
 - Helping students recognize patterns and organize knowledge both within and across content areas

⁶² Walker, A. & Kelley, K. (2012). Strategies for teaching academic skills. In *Evidence-based instructional strategies for transition*. Baltimore, MD: Brookes.

⁶³ Bost, L. W. & Riccomini, P. J. (2006). Effective instruction: An inconspicuous strategy for dropout prevention. *Remedial and Special Education, 27*(5), 301-311

SKILL DEVELOPMENT

Student-Focused Planning

The *What Works in Transition Research Synthesis Project* has built upon these principles to identify a comprehensive list of strategies for teaching academic skills that are evidence-based⁶⁴.

- Mnemonics:
 - Used to help students memorize concepts by using keyword cues to facilitate learning. Examples include:
 - Memory-associative techniques that use known information to facilitate the learning of new information
 - Keyword mnemonic strategies that combine visual and auditory cues to provide direct links to responses
 - Keyword-pegword strategies that use numbering or ordering along with rhyming
 - Reconstructive elaborations that use keywords and pictures to help students to learn abstract information
- Peer Assistance:
 - Includes a variety of strategies including peer tutoring, cooperative learning, and peer instruction
- Self-Management:
 - Methods used by students to manage, monitor, record, and/or assess their behavior
- Technology-Based Instruction:
 - Using technology to deliver, assist, enrich, and manage instruction
- Visual Displays:
 - Help students to organize complex ideas into meaningful topics using strategies such as graphic organizers, cognitive maps, structured overviews, tree diagrams, concept maps, and thinking maps

B. Life Skills⁶⁵

Models of secondary education that only emphasize the development of *academic skills* have been shown to be inadequate in preparing youth with disabilities for their postsecondary lives. For this reason, *life skills education* is often cited as a best practice. Functional-life skills are skills that are both academic and that are needed to successfully function as an adult. These may be skills that are related to social skills, independent living, recreation, health, and communication. These may be taught as a part of a separate curriculum, but they can also be integrated into the general education curriculum with creativity and collaboration between special and general educators.

⁶⁴ National Secondary Transition Technical Assistance Center, “Academic Evidence Based Practice Descriptions” <http://www.nsttac.org/content/academic-evidence-based-practice-descriptions>

⁶⁵ Kochhar-Bryant, C. and Greene, G. (2009). *Pathways to successful transition for youth with disabilities*. Upper Saddle River, NJ: Pearson.

SKILL DEVELOPMENT

Student-Focused Planning

Many life skills can be taught using the same methods that are used to teach traditional academic content. However, because most life skills are learned so that students can participate more fully in their community, it is important that teachers use strategies that have been specifically designed for use with students with disabilities. This means considering the environment in which these skills will be used. The conditions under which these skills are taught and practiced should as closely reflect the conditions under which the skills will be used as possible. This will likely require the use of community-based instruction.

C. Employment Skills⁶⁶

Preparing students for employment is an important part of the transition process. Career education is one school-based service that can be used to ensure that all students are provided with services and instruction designed to prepare them for postsecondary employment.

Career education promotes an emphasis on careers in all courses from pre-kindergarten through secondary school. It is one way to provide employment preparation instruction within the general education curriculum.

There are a number of benefits to providing career education to all students, including those with and without disabilities. When career education is infused into the curriculum, learning becomes more meaningful. When students are taught curricula that are relevant to their future goals, they are more motivated to learn the skills that they will need in order to be successful after graduation. Further, the skills that students can learn through career education activities, such as working independently and with others, following directions, and communicating effectively, are important for job success.

Integrating Academic and Career Education

- Modify career and academic courses to encourage the learning and application of both sets of skills
- Require senior projects in which students participate in a culminating experience related to their chosen career path
- Offer classes related to occupational clusters, career pathways, or career majors
- Give hands-on assignments that require the application of academic skills to career related activities

Career education traditionally has four stages, beginning in elementary school and extending through high school.

STAGES OF CAREER EDUCATION

⁶⁶ Test, D. W., Aspel, N. P., & Everson, J. M. (2006). *Transition methods for youth with disabilities*. Upper Saddle River, NJ: Pearson.

SKILL DEVELOPMENT

Student-Focused Planning

Career Development Stage Descriptions			
Stage	Timeframe	Goals	Related Activities
Career Awareness	Early Elementary – Middle School	<ul style="list-style-type: none"> • Provide students with basic awareness of all kinds of work, the role of the worker, and how the student can fit into work-oriented society • Develop initial work-related values and skills • Develop initial understanding of personal strengths, interests, and limitations • Develop an appreciation of all careers to develop awareness of the wide range of available occupations 	<ul style="list-style-type: none"> • Exploring jobs in the community • Performing classroom jobs • Identifying likes and dislikes • Investigating what adults do at work, at the school, and in the community
Career Exploration	Middle – High School	<ul style="list-style-type: none"> • Explore interests and abilities in relation to the various occupations available • Explore unique abilities and needs through hands-on experiences both in and outside of the school-setting 	<ul style="list-style-type: none"> • School-based enterprises • On-campus jobs • service learning projects • Community-based job shadowing • Administering vocational assessments
Career Preparation	High School	<ul style="list-style-type: none"> • Assist with career decision making • Develop skills that are needed for success in the workplace 	<ul style="list-style-type: none"> • Instruction in self-determination skills • Promoting student-directed IEP planning processes • Interpersonal skill instruction • Job obtainment skill instruction • Job-specific skill instruction • Paid and unpaid work experiences • Job clubs
Career Assimilation	Final Years of High School	<ul style="list-style-type: none"> • Finalize plans for transition to postsecondary environments • Create plans to reach postsecondary goals • Develop interagency linkages 	<ul style="list-style-type: none"> • Student-directed IEPs • Referrals to adult providers • Summary of performance

SKILL DEVELOPMENT

Student-Focused Planning

While career education is a powerful employment preparation strategy, it will not be enough for many students with disabilities if they are not given the opportunity apply the skills that they are using in class to environments that more closely resemble work environments.

I. On-Campus Employment Related Activities

The school can be a great place to offer early work experiences to students as it is generally an environment that is understanding and supportive of students who have not yet mastered many of the skills that are necessary for job success. Further, the school environment can provide work situations in which many variables such as level of supervision, pace of work, and amount of interaction with others can be controlled.

Examples of School-Based Enterprise Work

Contracts with Local Businesses

- Labeling linens for hospitals or nursing homes
- Preparing silverware packages for restaurants
- Labeling file folders
- Collating and mailing

Providing Services

- Laundry service
- Mending or sewing service
- Packaging supplies
- Collating and mailing
- Recycling
- Shredding

Manufacturing Products

- Gift baskets
- Herbs or plants
- Seasonal crafts
- Jewelry
- Candles
- Stationary

One example of an on-campus employment skill training program is **school-based enterprises**.

These have been described as any school-sponsored activity that engages a group of students in producing goods or services for sale or to be used by people other than the students involved. These are an excellent way to simulate a real-life work environment inside of the school. When done well, these enterprises simulate real working conditions while students perform real work like operating small businesses, performing work for area businesses, and/or completing tasks for non-profit organizations.

School-based enterprises give students the opportunity to learn and apply the work behaviors and skills needed to perform in a competitive employment setting. Further, students are exposed to a variety of job tasks related to a number of career clusters that can assist them in career decision making. Finally, students are also typically involved in many of the procedures associated with operating a retail or service-oriented business such as projecting costs, ordering materials, maintaining equipment, marketing products, organizing tasks, and taking inventory.

SKILL DEVELOPMENT

Student-Focused Planning

On-campus jobs are another type of school-based employment skill training experience. These can be paid or non-paid work experiences in which a student is placed in a real job within the school under the supervision of a school employee. These jobs introduce students to a work environment that requires many of the same skills that they will encounter in competitive work settings.

On-campus jobs give students the opportunity to explore vocational interests and develop job-skills. For example, students can learn about the tasks involved in education, secretarial, media, custodial, landscaping, maintenance, and food service careers. They can also compare their personal interests and ability levels to what is required for these occupations. Further, students get hands-on experience in completing job tasks, using work-related equipment, interacting with others in a work environment, and following directions.

Job clubs not only provide students with disabilities with an experience related to employment preparation, but they can also provide with them an integrated social experience by including students with and without disabilities. A job club can help students to develop job-seeking skills while also providing peer support for obtaining and maintaining employment.

Job clubs typically meet after school hours one day a week when a group of students with the common goal of obtaining and maintaining competitive employment meet with a staff sponsor to focus on employment-related activities. These activities may include:

- Sharing job leads
- Instruction on completing job applications and writing résumés
- Researching the local job market
- Visiting local businesses and meeting with personnel directors
- Developing job-seeking and interpersonal skills through instruction, role playing, and peer critiques

The staff sponsor of a job club provides instruction, leadership, and encouragement while facilitating important employment preparation activities.

II. Community-Based Employment Related Activities

While school-based employment preparation activities are important, an over-reliance on only school-based activities denies students the opportunity to generalize skills to community-based work environments. In order to prepare most students with disabilities for successful employment after high school, students should be provided with community-based career preparation as well.

Potential On-Campus Jobs

- Cafeteria worker
- Office assistant
- Custodial assistant
- Teacher assistant
- Maintenance assistant
- Grounds keeping assistant
- Bus maintenance assistant
- Lab assistant
- After or before care assistant

SKILL DEVELOPMENT

Student-Focused Planning

Job Site Visits

Job site visits are one example of a community-based employment exploration activity that is relatively easy to implement.

Job site visits are typically short tours of local job sites. When they are most effective, these visits focus on the work being done at the site. Students get a sense of the job tasks and the education, skills, and training needed for the jobs that they are exposed to during the visit. These short visits are an excellent opportunity for students to see the wide variety of jobs that are often available within one building.

Benefits of Community-Based Training

- Promotes generalization of skills
- Offers a high level of interaction with individuals without disabilities
- Exposes students to a wider variety of careers and job tasks
- Places students in natural environments where skills can be more accurately developed and assessed

Job Shadowing

Job shadowing provides students with a more in depth look at a particular career. These experiences give students a chance to try out a job by working alongside employees at area businesses. This allows students to develop a more comprehensive understanding of the work tasks associated with a particular position.

Job shadowing usually involves spending a few hours at a single worksite and can help students to develop a better understanding of their personal interests and abilities.

Internships

Internships allow students to spend an extended period of time at a single job site in order to develop skills and knowledge needed for job in their internship field. Internships typically last for several weeks or months.

A number of employers are interested in working with schools in order to provide youth with disabilities work-based experiences. However, the primary concern of employers is to successfully run their business. Therefore, they are going to be even more willing to work with schools when schools can show them how working with youth with disabilities can benefit their business. In order to do this, educators must get to know what employers need and how students with disabilities can help to meet those needs.

Informational interviews are an easy way to learn more about area employers and to identify opportunities for work-based experiences that may take place at their workplace. They are a great way to meet employers and discover their needs. Often these interviews can lead to future activities for students at the worksite. Here are a few tips to help conduct successful informational interviews⁶⁷:

⁶⁷ Luecking, R. G. (2009). *The way to work: How to facilitate work experiences for youth in transition*. Baltimore, MD: Brookes.

SKILL DEVELOPMENT

Student-Focused Planning

- Ask to meet with someone who is knowledgeable about the business.
- Make your request for a meeting easy to fulfill. For example, you might say something like, “I work with youth with disabilities at a local high school and I would like to learn more about what I can be doing to prepare them to be better employees by learning more about your business” or “I work with a number of students who are very interested in _____. Is it possible for me to meet with you briefly in order to learn more information?”
- Be prepared. Conduct research on the business and industry before the meeting and prepare questions ahead of time.
- Use the interview to better understanding the staffing and operational needs of the business and how you may be able to help meet them. Request a tour and ask questions to help you understand what you are seeing.
- Respect the employer’s time by keeping the meeting to no more than fifteen to twenty minutes.
- Be sure to thank the employer for his or her time. When you get back to school or your office take the time to write a short thank you note or email to thank the employer for his or her time and interest.

It’s important to keep in mind that not every informational interview will lead to a work-based experience for students. However, each interview adds a contact for possible future activities and increases your knowledge of what employers are looking for and how they operate.

SKILL DEVELOPMENT

Student-Focused Planning

Promoting Graduation

Students with disabilities are at a substantially higher risk for dropping out of high school than their peers without disabilities. While the dropout rate of students with disabilities has been declining, it remains stubbornly high with over 26% leaving school each year. Of special concern are students with emotional disabilities, for whom the dropout rate is almost 45%.⁶⁸

A first step towards promoting graduation is recognizing the warning signs and risk factors that contribute to the decision to leave high school. Warning signs and risk factors include⁶⁹:

- Poor attendance, missing classes, skipping school
- Academic failure such as poor grades, failing classes, and losing credits; retention is an especially serious risk factor
- Behavior problems that lead to the repeated use of consequences such as suspension and expulsion; not only do these consequences exclude students from school, but they also lead to a further loss of instructional time and academic difficulties
- Emotional withdrawal and a lack of interest in school activities
- Certain subsets of students, including those with emotional disabilities and those from low-income households, are at an increased risk for leaving high school before graduation

Educators need to be on the lookout for these warning signs, which often begin as early as middle school. Ninth grade is a particularly important time, as academic achievement during this year has been found to be predictive of achievement throughout high school. It is important to act in order to identify the causes and possible interventions as soon as **possible** when these behaviors are observed in students.

Youth with disabilities who do not earn a diploma are more likely to:

- Have fewer employment and education or training options, as few go on to earn their GED
- Live less independently and need the support of living with their parents into early adulthood
- Work in low-skill and low-paying jobs; further, the earning gap between youth who drop out and those who complete high school widens over the years
- Become dependent on government programs; youth who do not complete high school are more likely to have future health problems, have children at a young age, become involved in the justice systems, and become dependent on government assistance programs.

⁶⁹ Bost, L. W. (2006). Building Effective Dropout Prevention Programs: Some Practical Strategies from Research and Practice. In *Big IDEAs: Dropout Prevention Strategies*, 3(3). Available at <http://www2.ed.gov/ndpc-sd/vol8.htm>

SKILL DEVELOPMENT

Student-Focused Planning

It is easier to promote graduation when one understands the reasons behind the decision to drop out. The decision to drop out is not always an intentional one; for many students they simply stopped going to school one day and found that no one seemed to notice or care. Students frequently report school-related issues as their reasons for dropping out. Students report that they leave high school due to a lack of motivation, boredom, a lack of challenging coursework, and a general lack of school engagement⁷⁰.

Why Youth Say They Dropout

- Dislike of school
- Poor grades
- Problems with other students
- Problems with teachers
- Belief that administrators or teachers want them to quit
- Family responsibilities
- Need to work
- Pregnancy

There are a number of steps that can be taken in order to promote the graduation of all students, including those with disabilities. Loujeania Williams Bost of the National Dropout Prevention Center for Students with disabilities has offered the following suggestions⁷¹:

- **Establish systems to routinely monitor risk factors and warning signs of school dropout**
 - Collecting and analyzing data on a regular basis can help to identify which students are most at risk for dropping out in order to target and provide interventions to those who need them most.
- **Intervene early**
 - Interventions should begin as soon as warning signs or risk factors are identified. High school is often too late, so interventions should begin in middle and elementary school whenever possible.
- **Increase family involvement**
 - Families play an important role in determining whether or not a student graduates from high school. Families can be positively involved by encouraging their children to stay in school, focusing on their children's strengths, and expressing high expectations for academic achievement. Schools should collaborate with families, providing them with opportunities to become more involved in their children's education.
- **Create school environments that are inviting, safe, and supportive**
 - Safe and welcoming environments have been shown to improve learning and student attendance. Moving to an emphasis on positive behavioral supports over exclusionary disciplinary practices is one way to cultivate this sort of an environment.
- **Help students to address problems that interfere with learning**

⁷⁰ National Parent Technical Assistance Center. (2010). *Promoting Graduation and Academic Achievement for Youth with Disabilities*.

⁷¹ Bost, L. W. (2006). Building Effective Dropout Prevention Programs: Some Practical Strategies from Research and Practice. In Big IDEAs: Dropout Prevention Strategies, 3(3). Available at <http://www2.edc.org/ndpc-sd/vol8.htm>

SKILL DEVELOPMENT

Student-Focused Planning

- Help students obtain the academic, health, social, and personal support services that they need in order to overcome any barriers that may stand between them and graduation.
- **Consider using evidence-based dropout prevention programs**
 - There are a few programs that have been successfully used as interventions to address the factors that lead to the decision to leave school before graduation. The National Dropout Prevention Center for Students with Disabilities provides a description of some of these programs on their website. This information can be found at http://www.ndpc-sd.org/dissemination/model_programs.php
- **Listen to students**
 - Students can tell us a lot about what will make school more relevant to them and increase their desire to stay in school.
- **Provide relevance and rigor**
 - Give students the opportunity to apply what they are learning to real world problems and help them to see the connections between what they are learning now and their lives in the future.
- **Help students build relationships at school**
 - Support students' ability to build relationships with caring adults by providing opportunities and time for these relationships to develop. These relationships deepen students' connection with the school and can enhance their learning.
- **Focus on effective instruction**
 - Change teaching and learning practices in ways that will increase engagement, academic success, and the development of the skills necessary for life after high school.

Family Involvement

DRAFT

FAMILY INVOLVEMENT

FAMILY INVOLVEMENT

Why is it Important to Support Families throughout the Transition Planning Process?⁷²

Families are the first, most knowledgeable, and most consistent influence a youth will have. The transition to adulthood is a critical time during which youth require a great deal of support from their families and other caring adults. Many families wish to assist their youth but are looking for guidance. They may not yet have thought about the full range of supports youth may need as they transition from school to further education, competitive employment, and independently living in their communities. Families may not be familiar with formal planning processes or supports available outside of the education system, or may not anticipate important questions to ask or the information they need to know before their young adult leaves school or home.

Families play an important role in helping youth envision a future for themselves that is rooted in high expectations and thoughtful planning. All youth need the support of their families and other caring adults as they transition into adulthood. Whether a youth has a disability or not, it is beneficial for all youth to dream and set high goals from an early age. Youth need to be supported as they ask themselves where they want to work, where they want to live, and what they want to do in their spare time.

The IDEA requires parent involvement in the IEP planning process and requires schools to document their attempts to gather information and notify parents prior to developing an IEP transition plan. Through proper and thoughtful involvement, family members can assist the rest of the team in identifying student strengths and weaknesses, providing existing documentation, and collaborating in creative problem solving and goal development.

Strategies for Fostering Family Empowerment⁷³

From the beginning, schools should ensure that families feel welcome at the school and are treated as valued partners in the transition planning process. Successful transition service providers understand that it is important to:

- Recognize that families are key resources that are often underutilized in the transition process;
- Provide outreach and communication in formats that engage families and create collaborative relationships across all programs with which families interact;
- Understand that fragmented services are often confusing to families and they need help bridging them;
- Recognize that the structure and functional definition of "family" is defined from the youth's perspective.

⁷² Adapted from the National Collaborative on Workforce and Disability for Youth, *The Guideposts for Success: A Framework for Families Preparing Youth for Adulthood*, Issue 36, September 2012, available at www.ncwd-youth.info/family-guideposts-information-brief

⁷³ Maryland Seamless Transition Collaborative. *Family Involvement & Participation*. Retrieved from <http://www.seamlesstransition.org>.

FAMILY INVOLVEMENT

What Families Need to Become Active Participants

An important aspect of involving families begins with the way in which schools plan for and conduct transition planning meetings. Schools should strive to hold meetings at convenient times for family work schedules and arrange for interpreters or translators to provide information in the parents' native language. Additionally, meeting preparation should be conducted in such a way that families are notified of their legal rights and given information on various options and resources. Most often, families will need moral support, help with problem solving, and assistance with cultivating natural and community supports.

Increasing Parent Involvement in Transition Planning⁷⁴

A barrier many parents face during the transition process is a lack of information and understanding of the transition process. Parents may not fully understand their child's disability or be able to articulate how their child's disability impacts learning. Many parents are confused or intimidated by the special education system and unknowledgeable about the transition process. Other barriers may be the school's lack of flexibility in scheduling meeting times around parent work schedules or difficulties in arranging transportation and child care.

Parents are more likely to be actively involved if the school environment is welcoming and their input is heard, respected, and acted upon. When educators make the effort to provide accurate and honest information about the transition process and requests for attendance and involvement ahead of time in a format that is easy for parents to understand, parents will feel prepared and willing to participate.

THE ROLE OF FAMILIES IN TRANSITION PLANNING

A Fact Sheet for Families

How Can Educators Support Family Involvement in the Transition Planning Process?

When supporting family involvement in IEP meetings and during the transition planning process, it is critical to work to build partnerships with families. Partnerships involve collaboration between professionals and family members where the expertise of each person is acknowledged and used to increase the benefits of education for students with disabilities.

IEP Teams and transition service providers should apply Turnbull's Seven Principles of Effective Family-Professional Partnerships in all of their work with families.

- **Communication**
 - Communicate openly and honestly with families in a medium that is comfortable for them.
- **Professional Competence**
 - Ensure you are highly qualified in the area you are working in, continue to learn and grow, and have high expectations.
- **Respect**
 - Treat families with dignity, honor cultural diversity, and affirm strengths.
- **Commitment**
 - Be available, consistent, and go above and beyond.
- **Equality**
 - Recognize the strengths of every member of the team, share power, and work together.
- **Advocacy**
 - Focus on getting to the best solution for the student.
- **Trust**
 - Be reliable and act in the best interest of the student.

TIPS FOR TEACHERS:

- Becomes familiar with resources on developing family-professional partnerships in secondary transition, including:
 - IRIS Center, *Collaborating with Families* online module, available at: <http://iris.peabody.vanderbilt.edu/module/fam/>
 - NCSET, *Parent/Professional Collaboration Frequently Asked Questions*, available at: <http://www.ncset.org/topics/family/faqs.asp?topic=29>
 - Northwest Regional Educational Laboratory, *Building Trust with Schools and Diverse Families: A Foundation for Lasting Partnerships*, available at: <http://www.ode.state.or.us/opportunities/grants/saelp/trustnwrel.pdf>
- Provide training and/or instructional materials in the early stages of transition planning.
- Begin reaching out to family members well before the IEP meeting to get to know the vision family members and their child have for the future. Incorporate this into your preparations for the IEP or transition planning meeting.

THE ROLE OF FAMILIES IN TRANSITION PLANNING

A Fact Sheet for Families

- Share materials to give parents the knowledge they need to actively participate in the transition planning process.
 - Keep materials simple and parent friendly and reduce the use of educational jargon.
- Encourage parents to attend workshops on transition planning and other transition-related topics offered by Advocates for Justice and Education, the Arc of DC, and other community-based organizations.

TIPS FOR TEACHERS, CONT'D

- Help families understand the importance of having high expectations for their child and reflect on the consequences of making educational program choices that will not lead to a standard high school diploma to ensure that they are making a fully informed decision.
- When considering work-based learning experiences for individual students, engage parents in thinking about how their own personal, professional, and community networks might lead to work opportunities in the community.
- Help parents connect with systems their son or daughter may need after they graduate from high school and follow up on their progress.
 - Remember—parents often report difficulty leaving the special education system they are familiar with and
- Be aware that the most involved members of a family may be parents, or they may be extended family members, friends, or others that regard themselves as family.

TIPS FOR ADMINISTRATORS

- Create a culture of high expectations for all students, including students with disabilities. Hold staff accountable for conveying that expectation to families.
- Create a culture supportive of family involvement in your school. Identify ways for parents of all students to be engaged in school activities, such as:
 - Hosting community events,
 - Involving parents on formal leadership committees,
 - Or sponsoring activities that offer parents basic information about college preparation, entrance exams, and financial aid.
- Be creative—think of traditional and non-traditional (e.g., technology-based) ways for parents to be engaged.
- Ensure time is devoted to strategies to create family-professional partnerships and implementing culturally responsive practices during in-service activities.
- Support a comprehensive transition process by allocating resources (substitutes, etc.) so that teachers can devote the time and attention required for positive student outcomes.

Adapted from the Council for Exceptional Children's (CEC) Division on Career Development and Transition (DCDT) Fast Facts: Parental Involvement, available at <http://www.dcdt.org/wp-content/uploads/2011/06/DCDT-Fast-Fact-Parental-Involvement.pdf>

THE ROLE OF FAMILIES IN TRANSITION PLANNING

A Fact Sheet for Families

Families are the first, most knowledgeable, and most consistent influence a youth will have.

Families are also in a unique position to teach the necessary social skills and work skills a youth and to instill a sense of determination and high expectations that goals can be achieved.⁷⁵

Participation and involvement of parents, family members, and/or other caring adults promotes the social, emotional, physical, academic, and occupational growth of youth and leads to better post-school outcomes.

How can families influence and support their youth as he/she transitions into adulthood?

All youth need parents, families, and other caring adults who do the following:

- Have high expectations that build upon the young person's strengths, interests, and needs and that foster each youth's ability to achieve independence and self-sufficiency;
- Remain involved in their lives and assist them toward adulthood;
- Help youth access information about employment, further education, and community resources;
- Take an active role in transition planning with schools and community partners; and
- Have access to medical, professional, and peer support networks.

In addition, youth with disabilities need parents, families, and other caring adults who have the following:

- An understanding of the youth's disability and how it may affect his or her education, employment, and daily living options;
- Knowledge of right and responsibilities under various disability-related legislation;
- Knowledge of and access to programs, services, supports, and accommodations available for young people with disabilities; and
- An understanding of how individualized planning tools can assist youth in achieving transition goals and objectives.

For a youth, "family" may mean a traditional family, households led by single parents, grandparents, or relatives, being involved in foster care, or living in a group home. Whatever the situation, youth benefit from families who are well informed about education, employment, youth development, and community supports. Informed families are better prepared to help youth understand options and make responsible decisions about their own lives.

⁷⁵ Adapted from the National Collaborative on Workforce and Disability for Youth, *The Guideposts for Success: A Framework for Families Preparing Youth for Adulthood* InfoBrief, Issue 36, September 2012, available at www.ncwd-youth.info/family-guideposts-information-brief.

THE ROLE OF FAMILIES IN TRANSITION PLANNING

A Fact Sheet for Families

Listed below are several ways that you and can assist in developing your child's transition plan.

Education/Training

- Help student set goals; discuss appropriate options
- Assist student in developing self-advocacy and self-management skills
- Help student develop decision making and communication skills

Employment

- Provide informal career awareness experiences
- Encourage student to work at a community or neighborhood job
- Reinforce work-related behaviors at home (grooming, etiquette, following directions, completing assigned tasks, etc.)

Independent Living

- If appropriate, initiate future financial and residential planning by:
 - Applying for the student's Social Security card or assisting with an SSI application
 - Developing a will
 - Determining guardianship
 - Promote self-reliance and independence at home
 - Assigning specific duties and chores around the home to the student
- Encourage and facilitate social activities with peers
- Teach and promote daily living skills (banking, cooking, cleaning, etc.)
- Promote good money management, budgeting, and saving
- Explore and promote community resources and experiences with student
- Emphasize, model, and teach good grooming, physical fitness, and social and communication skills
- Provide opportunities for participation in sports, daily exercise, hobbies, etc.
- Reinforce positive community citizenship and work values and support self-esteem

In General

- Advocate for the development and initiation of services that do not currently exist in the school or community
- Actively support efforts to provide transition in a variety of community settings

THE ROLE OF FAMILIES IN TRANSITION PLANNING

A Fact Sheet for Families

Before the IEP Meeting:

- Help your student to prepare to participate in his or her IEP meetings by helping to practice making introductions and identify accomplishments, goals, and dreams
- Become informed about quality transition planning and relevant community services that can assist and support your child in achieving success as adults
- Provide an assessment of the student's skills outside of the school environment

During the IEP Meeting:

- Share information about your student, including:
 - What has worked in the past
 - Family strengths and resources
 - Challenges the student and family are facing
 - Your dreams of the future for your student
 - Provide information about your student's skills outside of the school environment

After the IEP Meeting:

- Assist in implementing identified transition goals
- Ensure the intentions of agreements and collaborative efforts between various agencies are fully met

FAMILY INVOLVEMENT RESOURCES

Local Resources for Families

DC Partners in Transition Resource Website

The DC Partners in Transition website is an online clearinghouse for local transition resources. The website connects visitors to a wealth of information on local programs, services, and activities in a variety of areas, including: peer support and advocacy groups, employment preparedness, job search assistance, internships, adaptive technology, health transition tools, and college & other postsecondary education and training. Visit the website at <http://www.dctransition.org>.

Advocates for Justice and Education (AJE): The Parent Training and Information Center for the District of Columbia

AJE offers free trainings for parents and educators, advocacy training for teens, and free resources and information about specific disabilities, special education laws, and the transition process. For more information, visit <http://www.aje-dc.org>.

NATIONAL RESOURCES FOR FAMILIES

Heath Resource Center at the National Youth Transitions Center

The Heath Resource Center is an online clearinghouse on postsecondary education for individuals with disabilities. *A Parent's Guide to the Transition of Their Adult Child to College, Career, and Community* is an online module designed to answer the following questions:

- What is my role in my child's transition planning? How can I mentor and support my child?
- How do my roles change as my child moves from high school to the college setting?
- How am I going to fund my child's college education?
- What information do I want to gain when my child and I tour college campuses?

To access the module and other information, visit <http://www.heath.gwu.edu/modules>

National Dissemination Center for Children with Disabilities (NICHCY)

- *Transition "Starters" for Everyone*, available at <http://nichcy.org/schoolage/transitionadult/starters>

National Center on Secondary Education and Transition (NCSET)

NCSET Parent Briefs promote effective parent involvement in secondary education and transition planning. Available at: www.ncset.org/publications

Interagency Collaboration

DRAFT

INTERAGENCY COLLABORATION

I. Improving Interagency Collaboration

One of the challenges IEPs Teams face during the planning process relates to meeting the complex support needs of many transition-aged youth with disabilities. Successful transition planning requires coordination between families, schools, government agencies, and community-based organizations to provide the services youth will need to find and sustain employment, live independently, and attain postsecondary education and training.⁷⁶

Interagency collaboration is a broad concept that describes formal and informal relationships between schools and adult agencies where resources are shared to accomplish common transition goals. Although research indicates that interagency collaboration is a key indicator of successful adult outcomes, it remains a challenge for most educators.

Some common barriers toward establishing collaboration and effective service coordination include:

- Fragmentation, duplication, and inadequacy of transition services and programs
- Poor or inaccurate perceptions of outside agencies by school staff, parents, and students
- Nonexistent or ineffective procedures for collaboration of school and agency staff throughout the referral, eligibility, determination and transition-planning process

These interrelated yet distinctive strategies represent collaborative activities that high-performing districts regularly utilized. Successful implementation depends on an interrelated system of staffing, support, knowledge, relationships, and funding. To achieve true collaboration, targeted strategies should occur in a consistent manner at the practitioner, administrative, and state levels.

A. Promising Strategies for Interagency Collaboration

1. Flexible scheduling and staffing

- School staff work outside of schools
- Agencies allowed to come into schools
- Shared work space
- Focus on accommodating families whenever possible
- Clearly identified expectations

Possible Partners

- Vocational Rehabilitation Services (RSA)
- Developmental Disabilities Administration (DDA)
- Workforce Development
- Juvenile Corrections
- Mental Health Services
- Parks and Recreation
- Social Security Administration
- Adult Service Providers
- Youth and Parents
- Advocates
- Neighborhood Organizations
- Businesses

⁷⁶ Information in this section adapted from Noonan, P., Morningstar, M., and Gaumer, A., *Improving Interagency Collaboration: Effective Strategies Used by High-Performing Local Districts and Communities*, Career Development for Exceptional Individuals, Vol. 31, No. 5.

INTERAGENCY COLLABORATION

2. Follow-Up After Transition
 - Operate with the understanding that transition coordinators would continue to assist families and students after graduation
3. Administrative Support
 - Collaboration between special education administrators and adult agencies
 - Provide opportunities for collaboration by providing flexible scheduling, compensation time, paid training, and substitutes
4. Use a Variety of Funding Sources
 - Schools identify ways to share funds and resources with other agencies
 - Schools regularly pursue external grant opportunities
5. State-Supported Technical Assistance
 - Regularly consider needs of transition counselors, secondary teachers, and individual communities
 - Seek local input when designing resources and training
 - Prioritize local and state needs before developing professional development activities
6. Ability to Build Relationships
 - Educators build collaborative, trusting relationships with adult service providers
 - Learn adult agency needs and limitations and share resources
 - Develop relationships through shared problem solving, goal setting, and joint training
7. Agency Meetings with Students and Families
 - Educators facilitate meetings between adult agencies, students, and families
 - Districts engage early and ongoing relationships between students and agencies by promoting high levels of agency presence at high schools
8. Training Students and Families
 - Provide information and training on adult service agencies to families
 - Provide information to students through school-based classes, agency presentations, and community-based programs
 - Agencies visit schools to explain available programs
 - Provide information to families through transition fairs, and conferences, parent visits to agencies, and ongoing agency parent trainings
9. Joint Staff Training
 - Provide joint training opportunities where educators, adult service agency representatives, families, and related-service providers come together to build

INTERAGENCY COLLABORATION

knowledge and working relationships

10. Interagency Transition Teams

- Hold regularly scheduled meetings (monthly or quarterly) between schools and adult service agency staff
- Ensure ongoing collaboration through information sharing and individualized student planning

11. Dissemination of Information to a Broad Audience

- Provide information to parents and students about adult agency contacts, types of available services, and strategies for securing services
- Disseminate information through products, local-level interagency groups, websites, mailings, and presentations

II. Establishing Formal Collaborative Agreements and Structures among Schools, Employers, Employment-Related Agencies, and Post-Secondary Institutions

Effective interagency collaboration often requires a change in behavior of participants and increased attention to both the *process* of collaboration and its *goal*, while keeping a student-centered focus.

Collaborative planning and service delivery requires a team whose members know complex service issues and have:

- An understanding of local and state agencies and community resources;
- Skills and willingness to work with others;
- Willingness to share knowledge and resources (no “turfism”); and,
- The ability to accept responsibilities for decisions and carry-out/enforcement/implementation made by the group.

A. Memorandums of Understanding

One mechanism professionals can use to promote interagency collaboration is a formal collaborative agreement, otherwise known as a Memorandum of Understanding.

Memorandums of Understanding (MOUs) can be described as formal documents that outline the relationships between various agencies such as the state education agency, Vocational Rehabilitation Services, and developmental disability organizations. MOUs can occur at the state or local levels, and appear to be an effective way of solidifying and maintaining relationships. MOUs are often connected with a state or local transition council and promote activities such as shared funding and joint training.

MOUs can provide clear guidelines for sharing local-level resources. For example, an MOU was developed between two agencies to form a new service provision to provide at-risk students and students with mild disabilities vocational training and assessment through community colleges. Additionally, developing an MOU can serve as a major collaborative activity between

INTERAGENCY COLLABORATION

several entities. This is a key strategy for relationship building, in which participants share information and work on common goals.

There are many different kinds of interagency agreements. Some may only identify the relationship between two entities, but many MOUs are much more comprehensive, and involve numerous entities such as Social Security Administration, Department of Labor, postsecondary education, the district, Vocational Rehabilitation Services, the Department of Health, etc.

MOUs are often developed at the administrative level, and frequently detail agency responsibilities. One transition coordinator noted, “It [MOU] gives all the teachers and everyone clear guidelines on ‘how’ and ‘who should’ and ‘what are we looking for’ to tap into those different agencies...it justifies why we invite various agencies to meet with parents and students.”

In another district, an administrator explained how the transition council developed “an agreement signed by middle-level management and the directors” which was updated every two years, and included: mental health, Commission for the Blind, and the development disability organization. The MOU identified points of contact for each agency, outlined potential services and eligibility requirements, and provided a formal commitment to working together.

Potential Topics to Include in MOUs	
Methods of communication	Methods of communication are critical for any team that is attempting to work towards a shared vision. Types of communication can include ongoing meetings, emails, listserv or website. It is important to consider methods of communication to meet the needs of each individual agency for clarity and involvement. Also, the use of minutes and agendas promote effective use of time and action-oriented teaming.
Information sharing protocols	It is important for agencies to consider how much and how little information should be shared, as well as how often. Also, issues of confidentiality, particularly related to students, should be addressed prior to sharing any information. These issues can be discussed and documented by the MOU members.
Referral protocols	There is often misunderstanding between education and adult agency staff related to services provided and populations served. To make matters more difficult, services and eligibility may change due to issues in funding or reauthorized legislation mandates. Because of this, it is important to have a clear understanding of agency eligibility requirements, as well as referral protocols such as needed paperwork (e.g., proof of disability, diploma, and family income).

INTERAGENCY COLLABORATION

Service/task responsibilities	When a group of people join together to team around a common vision, it is important that individual members have a clear understanding of their tasks in group endeavors. For this reason, action plans should be used to plan team activities by goals, and they should include a timeline, person responsible, and how the activity will be evaluated. Additionally, agendas and minutes are mechanisms to keep work on track and prevent large amounts of work falling on one or two people.
Funding responsibilities	When developing a formalized agreement, any funding responsibilities need to be clearly stated, or it should be stated that funding is not included in the agreement.
Points of contact	Clear points of contact should be identified for all members and should include name, email, agency website, and phone numbers if appropriate.

III. Utilizing School and Community Level Transition Education and Services Based on a Community Context

In a time of diminishing resources, it is very important to identify school and community resources that could positively impact transition education and services. Resource mapping is a system-building process that: leads to change, identifies resources and barriers to building a system, strategizes optional use of resources, identifies limitations and gaps in resource coordination, explores new resources, and coordinates resources for strategic planning.⁷⁷

Resource mapping requires three major steps:

1. Identifying how current resources are used;
2. Determining if and how current resources can be altered to meet a given need; and,
3. Identifying additional resources to meet a given need. Resources can be personnel, time, money, knowledge/training, or materials.

A. Pre-Mapping Assessment

Establish a team and create a vision/goal (e.g., reduce dropout rates, improve post-school outcomes). Potential partners could include:

- Secondary education staff (i.e., transition, general, special)
- Adult education representative
- Advocacy organizations
- Business-education partnership representative
- Community action agency representative
- Correctional education staff
- Drop-out prevention representative
- Employers

⁷⁷ Crane and Luecking, NSTTAC Secondary Transition State Planning Institute, 2009.

INTERAGENCY COLLABORATION

- Extension service representative
- Transportation representative
- Higher education representative
- Community-based organizations

B. Create an Organizing Framework

Determine how the team will collect and organize information before beginning. For example, resources can be categorized in the following way:

- Universal Resources
 - Resources available to all youth aimed at enhancing success and reducing barriers to the transition process
- Selected Resources:
 - Supplemental resources provided to small groups of youth to reduce the potential for increased difficulty and risk for long term failure
- Targeted Resources:
 - Individually designed, intensive resources or interventions needed by very few youth

C. Complete a Community Resource Mapping Tool⁷⁸

When contacting the service agency, find out the following information:

- Name, address, phone number, website/email contact information
- What services do they provide for youth with disabilities? (Ask about services for specific disabilities or in general).
- What services do they provide for adults with disabilities?
- How are services funded? What types of funding sources pay for services?
- Are there services the agency is planning on offering in the near future for youth with disabilities?
- Are there critical resources, services missing?
- Does the agency know of other agencies or organizations in the community that provide services to similar populations of individuals with disabilities (e.g., other employment services, mental health services, housing services, case management services)?

⁷⁸ To obtain a tool template, visit

http://www.ncset.org/publications/essentialtools/mapping/NCSET_EssentialTools_ResourceMapping.pdf

INTERAGENCY COLLABORATION

Community Resource Mapping Tool 4: Scanning the Resources

Task: To produce a comprehensive list of the various resources in the community.

Process:

Step 1: Across the top of the chart, identify your domains for improved outcomes (e.g., secondary education and graduation; postsecondary education and training; career preparation and employment; youth development and leadership; and supportive and adult services).

Step 2: In the left-hand column, list the community resources including organizations, funded projects, initiatives, etc., that support your domains (e.g., workforce-development funded programs, Boys & Girls Clubs, faith-based organizations, school initiatives, etc).

Step 3: In the columns to the right, indicate the services or supports provided by each community resource under the appropriate domains.

Targeting Community Resources to Improve Postschool Outcomes for Youth

COMMUNITY RESOURCES	Secondary education and graduation	Postsecondary education and training	Career preparation and employment	Youth development and leadership	Supportive and adult services
[List organizations and funded projects, programs, and initiatives.]	Access to high standards Educational assessment Vocational assessment Graduation standards Diploma options Staff training and professional development Alternative education	GED preparation Career and technical programs Two- and four-year degree & certificate programs Adult education	Career awareness Vocational assessment Work experience (paid and unpaid) Supported employment Competitive employment Job development Service learning	Person-centered transition planning Self-advocacy Self-determination Social, civic, and leadership skills Leadership opportunities Mentoring	Housing Transportation Recreation Mental health Physical wellness Adult service programs Assistive technology Day rehabilitation Family involvement Benefits planning Child care Case management

D. Implement the Map

“The power of resource mapping comes with what happens after the resources have been identified.”

Once you’ve finished mapping, work as a team to develop a strategic action plan, facilitate access to resources, and communicate and disseminate information.

It is important to create an action plan after reviewing results of the Community Resource Mapping project.⁷⁹ By reviewing availability and distribution of services, extra resources in one area can be redirected to an area of need. Furthermore, a plan to access previously unutilized community resources can be created. Through resource mapping, your team will identify important agencies in order to build mutually beneficial partnerships.

Program Structure

DRAFT

PROGRAM STRUCTURE

I. Effective Resource Allocation

Transition planning is not a process that can be effectively implemented by only one or two professionals. As the saying goes, “It takes a village.” Within transition services this village not only includes transition professionals (such as transition coordinators or specialists), but also all special education teachers, general education teachers, related services personnel, administrators, family members, and community agency personnel. Together these individuals must collaborate to identify needs and address those needs through the creative use of resources. This may mean providing instruction within the community, training job coaches to support students in learning employment skills at job sites, applying academic content to real-life experiences, or carving out a position that can focus on the coordination of transition services among all entities.

While the secondary special education teachers must be trained to provide effective transition services, many districts have found it to be beneficial to create a transition coordinator position, as this role is substantially different than that of the classroom teacher.

Transition coordinators employ many strategies to collaborate with adult agencies, such as:

- Communicating with a wide spectrum of agencies,
- Meeting with and training students and families about adult agency services,
- Participating in joint training with adult agency staff,
- Participating in transition councils, and
- Disseminating adult agency information.

Transition coordinators also need the flexibility in their work schedules to dedicate ample time to building relationships and creating linkages for youths with disabilities. They build positive interagency relationships by attending meetings and trainings with adult agencies, developing formal collaborative agreements, and engaging in systems and individual student advocacy. Transition coordinators must be highly active outside school walls to forge quality relationships with adult agencies, families, and community organizations.

Another strategy that districts have implemented to enhance transition services is the blending of resources and/or staff with community agencies. For example, some schools provide an office for the local Vocational Rehabilitation counselor. Others pool funds to create a joint position between the school and the agency. Blending these resources can help students smoothly transition from school to adult services.

PROGRAM STRUCTURE

II. Human Resource Development

Transition planning is often only a cursory topic within pre-service special education programs, and therefore few educators have the training and experience to implement effective transition practices without further training. This training often is provided in the form of in-service, workshops, or collaborative communities. Cross-disciplinary training can also increase the effectiveness of collaborative transition services within the school and the community. Because transition planning is not the responsibility of a single person, all individuals involved in the transition process benefit from joint training and action planning.

Transition-related personnel competencies have been identified by the Council for Exceptional Children, Division on Career Development and Transition. These competencies can form the framework for professional development planning within transition.

Additionally, many educators, family members, and agency staff seek out resources and self-paced training online through the numerous entities dedicated to transition planning. Several of these entities are provided in the Appendix.

III. Transition Evaluation: Measuring our Success in the District of Columbia

The effectiveness of transition planning and other special education indicators are evaluated in each state through the State Performance Plan (SPP). This plan outlines the activities and targets for 20 indicators, and outcomes for each indicator must be reported to the U.S. Department of Education, Office of Special Education Programs (OSEP) on an annual basis. As identified in the tree of influence on the following page, many indicators are impacted by transition planning (i.e., graduate and dropout rates, adequate goals and transition services and post-school outcomes).

At the school level, the State Performance Plan indicators can provide a framework for evaluating the effectiveness of transition services. Collection of this data can be simplified through a data-base management system. Then the data can be analyzed on an ongoing basis for both program evaluation and program improvement.

As with all components of transition planning, program evaluation is not limited to high school special education programs and services. School interdisciplinary policies (e.g., core curriculum, electives, discipline practices), collaboration with agencies, and family perspectives must also be included in the interpretation of student outcomes.

When considering changes or additions to transition programs, a needs assessment should be conducted to identify the perceptions of students and families, continuum of services provided by the school, continuum of services provided by collaborative community providers, and gaps in post-secondary services.

Appendix

DRAFT

GLOSSARY

Glossary

Accommodation – a modification or adjustment that makes something accessible

ADA – Americans with Disabilities Act

ADHD – Attention Deficit/Hyperactivity Disorder

Age of Majority – the age at which a student becomes a legal adult and when IEP decision making rights transfer from the parent to the student (age 18)

AJE – Advocates for Justice and Education

Apprenticeship – on the job training

Assistive Technology – any piece of equipment (low tech to high tech) used to obtain access and/or independence

Behavior Assessment – an evaluation that assists in identifying special needs

CFSA – Child and Family Services Agency

DCPS – District of Columbia Public School District

DDA – Developmental Disabilities Administration

DDS – Department of Disability Services

DOES – Department of Employment Services

FAPE – free and appropriate education as determined by law

Goals – measurable ideas, directions, tasks, objectives, etc. in an IEP

Graduation Certificate – certificate issued by the state to students who do not fully meet the diploma standards

IDEA – Individuals with Disabilities Education Act

IEP – Individualized Education Program/Plan

Internship – training in an identified career choice in a community setting

Job Coach – an individual who helps train a person on the job site

Job Shadowing – when an individual follows or “shadows” an employee to observe what a job entails

LD – learning disability

LRE – least restrictive environment

NYTC – National Youth Transition Center

Objectives – specific tasks to meet a goal

OSSE – Office of the State Superintendent of Education

PCSB – Public Charter School Board

PLAAFP – Present Levels of Academic Functioning and Performance

Post-secondary – after high school

Psychological Evaluation – a series of evaluations that assists in identifying a psychological disability

PWN – Prior Written Notice

GLOSSARY

Regular Education Teacher – a teacher who teaches regular education courses

RSA – Rehabilitation Services Administration

Section 504 – a section of the Rehabilitation Act addressing reasonable accommodations

Self-assessment – determining one’s own needs

SOP – Summary of Performance

Special Education Coordinator – a person who helps educators design curriculum, schedules and leads IEP team meetings, etc.

Special Education Teacher – a teacher who works with students with disabilities

SSA – Social Security Administration

Technical College – a college that offers course study geared towards careers as well as university transfer programs

Transition – any movement from one area to another, e.g. school to work

Transition Coordinator – a school staff member who helps design transition plans and assists in meeting the needs of students with disabilities

TTY/TDD – telephones used by the deaf consisting of a keyboard and display

ULS – University Legal Services

Vocational Assessment – a way to determine career interests

VR – Vocational Rehabilitation

DRAFT

INDEPENDENT LIVING CHECKLIST

Independent Living Checklist

This model form is designed to help the IEP team decide if a student needs a postsecondary goal in the area of independent living. Independent living includes the skills and knowledge an individual needs to direct his or her life at home and in the community. Transition assessment information should be taken into account when completing this form and additional assessment may be necessary to adequately identify goal(s).

Review each statement, and consider whether the student possesses the identified skills.

Yes – performs independently and consistently;

No – performs inconsistently or not at all; consider an independent living goal

NA – not an area of independence being considered at this time;

Home Living

	Yes	No	NA
Follows daily living routine (e.g., personal hygiene, dressing, selecting clothes)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Purchases, prepares and stores food; maintains healthy diet	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Performs light household maintenance (e.g., cleaning, unclogging drains or toilets)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Appropriately makes and receives telephone calls	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Follows disaster safety routines for fire and natural disasters	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Household & Money Management

	Yes	No	NA
Creates and maintains checking & savings accounts	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Manages money (e.g., counts money, makes change, budgets, pays taxes, and monthly bills)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Evaluates cost of services (e.g., banking, telephone, leasing, credit cards, loans)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Locates & acquires place to live (e.g., finds housing, understands rental agreements)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Sets up living setting (e.g., organizes furniture, arranges for utilities and services)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Understands the importance of a good credit rating, how to view and interpret a credit report, and methods to improve credit rating	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Transportation

	Yes	No	NA
Selects appropriate method of transportation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Possesses required transportation documentation (e.g., driver's license, bus pass)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Organizes transportation (e.g., carpool partners, door-to-door bus or cab service)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Navigates community using preferred mode of transportation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
If driving, knows of automotive maintenance schedules and routines	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

INDEPENDENT LIVING CHECKLIST

Law & Politics Yes No NA

Knows how to participate in voting and political decision-making

Understands basic local, state, and national laws

Understands rights as a person with a disability

Community Involvement Yes No NA

Locates & participates in leisure, recreation, and community activities

Locates and uses community services
 (e.g., stores, banks, medical facilities, recreation facilities, health department, police department, social services)

Completes paperwork for medical treatment, community services, insurance, etc.

Plans and acquires wardrobe
 (e.g., select appropriate clothes, compare prices)

Responds appropriately to environmental cues (e.g., signs, sirens)

Personal Safety and Interpersonal Relationships Yes No NA

Performs basic first aid and seeks medical assistance when appropriate

Practices community safety routines (e.g., when to talk to strangers, avoiding unsafe locations, locking doors, asking for directions)

Understands when it is appropriate to call 911

Knows CPR and when it is necessary

Maintains relationships with family and friends; establishes new friendships

Understands the concepts of sexuality (e.g., physical self, reproductive process, dating, relationship, marriage)

Makes informed choices regarding sexual behavior

Demonstrates an understanding of basic parenting skills

Self-Advocacy Yes No NA

Expresses strengths and needs; asks for accommodations when needed

Expresses preferences appropriately, identifies long- and short-range goals, and takes steps to reach goals

Assertively advocates for self in situations outside of school

Responds appropriately to typical exchanges with others (e.g., saying hello, being bumped or brushed against, making small talk, sarcastic remarks, etc.)

Resolves conflicts through discussion, reasoning, & compromise

Additional Independent Living Skills Yes No NA

INDEPENDENT LIVING CHECKLIST

If “No” was answered for any of the skills identified above, a postsecondary goal should be considered for the area of independent living. The discussion questions below help further identify an appropriate goal.

Independent living goal(s) needed at this time? Yes No

Is additional assessment information needed in the area of independent living? Why?

What are the 3 most important independent living skills to be addressed in IEP?

- 1.
- 2.
- 3.

How can we work on these particular skills throughout this coming year (i.e., instruction, related services, post-school living objectives, daily living skills, and/or functional vocational evaluation)?

What annual IEP goal(s) will enable the student to meet the postsecondary independent living goal?
